 - 4 Scales white to pale tan; bristles absent or 1-3 rudimentary.
 - 5 Base of plant not bulb-like, not enclosed in bladeless sheaths; achene 1.0-1.2 mm long, 0.8-1.0 mm wide *Rh. chapmanii*
 - 5 Base of plant blub-like, enclosed in bladeless sheaths; achene 1.4-1.8 mm long, 1.2-1.5 mm wide *Rh. pallida*
 - 4 Scales tan, rufous, or brown; bristles present (if rudimentary, then 4-6).
 - 6 Achene 0.6-1.1 mm wide, pyriform, obovoid, or narrowly elliptic, pale to dark brown but not blackish; tubercle margin setose (bearing bristle-like projections).
 - 7 Achene narrowly elliptic or narrowly obovoid, 1.2-1.5 mm long by 0.6-0.7 mm wide, twice as long as wide; tubercle 0.8-1.2 mm long [*Rh. curtissii*]
 - 7 Achene broadly elliptic to obovoid or pyriform, < 2 × as long as wide; tubercle 0.4-1.5 mm long.
 - 8 Leaves 2-4 (-5) mm wide; stipe subtending achene 0.5-1.0 mm long *Rh. crinipes*
 - 8 Leaves 0.2-1.5 (-2) mm wide; stipe subtending achene < 0.4 mm long.
 - 9 Leaves to 1.5 (-2) mm wide; achene 1.0-1.7 mm long, 0.9-1.1 mm wide; tubercle 0.5-1.5 mm long.
 - 10 Culms solitary to loosely cespitose by slender rhizomes; terminal internode straight; clusters turbinate to ovoid; achene 1.0-1.3 mm long, uniformly medium to dark brown; tubercle 0.7-1.5 mm long; bristles usually of two lengths, some equaling the tubercle, and some equaling or shorter than the achene [*Rh. fusca*]
 - 10 Culms solitary to cespitose, without slender rhizomes; terminal internode often arched; clusters corymbose to hemispheric; achene 1.3-1.7 mm long, pale to reddish-brown, often translucent centrally, with a distinctly thickened wire-like margin; tubercle 0.5-1.0 mm long; all bristles more-or-less equaling the tubercle *Rh. harperi*
 - 9 Leaves filiform, < 1 mm wide; achene 0.8-1.3 mm long, 0.6-0.9 mm wide; tubercle 0.4-0.8 mm long.
 - 11 Culms without rhizomes; spikelets 2.5-4 mm long; achene translucent centrally; tubercle 0.4-0.6 mm long *Rh. filifolia*
 - 11 Culms with delicate rhizomes; spikelets 5-7 mm long; achene uniformly opaque; tubercle 0.6-0.8 mm long *Rh. pleiantha*
 - 6 Achene > 1 mm wide (except 0.8 mm wide in *Rh. fernaldii* with a blackish surface), suborbicular or broadly ellipsoid; tubercle margin smooth or roughened but not setose.
 - 12 Achene 0.8 mm wide, 0.9-1.0 mm long, blackish *Rh. fernaldii*
 - 12 Achene 1.1-1.7 mm wide, 1.3-2.0 mm long, brown to dark brown.
 - 13 Tubercle 1.0-2.6 mm long, long-attenuate to subulate *Rh. gracilenta*
 - 13 Tubercle 0.2-0.8 mm long, triangular to triangular-attenuate or with a strap-like beak.
 - 14 Bristles rudimentary to ½ as long as achene body.
 - 15 Larger leaves 2-4 mm wide; mature culms to 13 dm long; floral fascicles (1-) 2-4; tubercle 0.4-0.7 mm long

-*Rh. fascicularis* var. *fascicularis*
 15 Larger leaves to 1 mm wide; mature culms to 4.5 dm long; floral fascicles 1 (-2); tubercle 0.2-0.5 mm long.....*Rh. debilis*
 14 Bristles > ½ as long to exceeding achene body.
 16 Basal leaves filiform to (rarely) 1.3 mm wide, the longer approaching length of culm; tubercle narrowed above the base into a strap-like beak.....*Rh. wrightiana*
 16 Basal leaves 1.3-4 mm wide, all much shorter than the culm; tubercle triangular to triangular-attenuate.
 17 Longer bristles equaling to exceeding the achene body; achene body elliptic, 1.1-1.3 mm wide; tubercle triangular-attenuate; larger basal leaves 1.3-2.5 mm wide.....*Rh. fascicularis* var. *distans*
 17 Longer bristles < ½ as long to rarely exceeding achene body; achene suborbicular, 1.2-1.5 mm wide; tubercle triangular; larger basal leaves 2-4 mm wide.....*Rh. fascicularis* var. *fascicularis*

**Key F – beaksedges with bristles smooth,
 or antrorsely barbed and filiform, or absent,
 the achene surface transversely ridged, rugose, or honeycombed-reticulate**

- 1 Bristles absent (or apparently so at 10×); achene 0.5-0.7 mm wide; tubercle 0.1-0.2 mm long, skull-cap like.
 2 Achene including tubercle 1.0-1.2 mm long, the achene surface evidently reticulate and obscurely transversely ridged, the body ellipsoid; bristles present, white, barely visible at 20×, the longest shorter than the achene body*Rh. thornei*
 2 Achene including tubercle 0.6-0.9 mm long, the body obovoid; bristles absent.
 3 Achene surface smooth, faintly reticulate, not transversely ridged.....*Rh. divergens*
 3 Achene surface rough, distinctly transversely ridge.....*Rh. pusilla*
 1 Bristles present or absent; if absent, then the achene > 1 mm long or > 0.7 mm wide, and tubercle triangular to subulate.
 4 Culms and leaves filiform.
 5 Achene including tubercle 1.0-1.2 mm long; tubercle minute, skullcap-like*Rh. thornei*
 5 Achene including tubercle 1.5-2.9 mm long; tubercle triangular to triangular-acuminate.
 6 Tubercle 0.3-0.7 mm long; bristles shorter than the achene*Rh. rariflora*
 6 Tubercle 0.8-1.4 mm long; bristles subequaling to exceeding the tubercle.....*Rh. stenophylla*
 4 Culms stouter; leaves wider, not filiform.
 7 Achene faces flat or concave; when one face is concave, the opposite face is sometimes slightly convex (slightly biconvex *Rh. decurrens* and *Rh. microcarpa* are keyed here for convenience).
 8 Achene at least twice as long as wide, elliptic-oblong; tubercle subulate, 0.8-1.2 mm long*Rh. inexpansa*
 8 Achene < twice as long as wide, obovate; tubercle triangular, 0.2-0.9 mm long.
 9 Longer bristles exceeding the achene body.
 10 Achene ±2.2 mm long, ±1.8 mm wide; tubercle ±0.9 mm long*Rh. punctata*
 10 Achene 0.8-1.2 mm long, 0.7-1.2 mm wide; tubercle 0.2-0.5 mm long.
 11 Larger leaves (3-) 4-6 mm wide; bristles exceeding tubercle; achene faces flattened.....*Rh. eliottii*
 11 Larger leaves 1-3 (-4) mm wide, bristles half as long as achene to equaling tubercle; achene faces slightly convex*Rh. microcarpa*
 9 Longer bristles shorter than to equaling achene body, or absent.
 12 Larger leaves 4-5 mm wide; achene 1.4-1.6 mm wide; tubercle 0.6-0.8 mm long, abruptly rising from a flaring basal collar*Rh. compressa*
 12 Larger leaves 1-3 (-4) mm wide; achene 0.7-1.3 mm wide; tubercle 0.15-0.5 mm long, without a flaring basal collar.
 13 Bristles rudimentary or absent*Rh. perplexa*
 13 Bristles one-half as long to equaling achene.
 14 Achene 1.3-1.8 mm long, 0.9-1.2 mm wide, the faces flat with 10-12 transverse ridges*Rh. torreyana*
 14 Achene 0.8-1.4 mm long, 0.7-1.2 mm wide, the faces slightly biconvex with 6-12 transverse ridges.
 15 Clusters elongate; achene 1.0-1.4 mm long, 0.8-1.0 mm wide, narrowly obovate to elliptic, averaging 8-12 transverse ridges; most tubercle bases convexly seated on the achene summit and somewhat decurrent along the achene margins, the tubercle surface often whitish-waxy*Rh. decurrens*
 15 Clusters usually compact; achene 0.8-1.2 mm long, 0.7-1.2 mm wide, suborbicular to elliptic, averaging 6-7 transverse ridges; most tubercle bases flat across the achene summit, not decurrent, the tubercle surface usually dark, not waxy.....*Rh. microcarpa*
 7 Achenes biconvex or tumid.
 16 Achene 1.4-4.2 mm long, 1.2-3.6 mm wide, the summit with a thickened bony to crustaceous rim surrounding the base of the tubercle.
 17 Achene lenticular and transversely ridge, ±1.4 mm long, ±1.2 mm wide.....*Rh. culixa*
 17 Achene tumid, lightly pitted or cancellate in a honeycomb pattern, 1.5-4.2 mm long, 1.4-3.6 mm wide.
 18 Leaves 4-8 mm wide; achene 3.0-4.2 mm long, 3.0-3.6 mm wide.....*Rh. megalocarpa*
 18 Leaves 2-4 mm wide; achene < 2.7 mm long and < 2.5 mm wide.
 19 Achene 2.0-2.7 mm long, 2.0-2.5 mm wide*Rh. grayi*
 19 Achene 1.5-1.8 mm long, 1.4-1.7 mm wide*Rh. harveyi*
 16 Achene 0.7-1.8 mm long, 0.7-1.5 mm wide, the summit without a textured rim surrounding the base of the tubercle (if the base of the tubercle is rim-like, then it is distinguished from the summit of the achene by a constriction or articulation).
 20 Bristles absent; achene 0.7-1.0 mm long.
 21 Scales broadly ovate, obtuse to sub-acute; achene strongly transversely ridged; tubercle depressed, broader than long; style not persistent*Rh. nitens*
 21 Scales lance-ovate, acute; achene weakly transversely ridged; tubercle triangular-lanceolate, as long as broad or longer; style usually persistent*Rh. scirpoides*
 20 Bristles present (occasionally detached in *Rh. decurrens* and *Rh. miliacea* with achenes 1.0-1.4 mm long).
 22 Bristles not exceeding the achene body.
 23 Cluster branches flexuous; bristles one-half as long to equaling the achene (or longer in *Rh. microcarpa*); achene slightly biconvex, 0.8-1.4 mm long, 0.7-1.0 (-1.2) mm wide.

- 24 Clusters elongate; achene narrowly obovate to elliptic, averaging 8-12 transversed ridges; most tubercle bases convexly seated on the achene summit and somewhat decurrent along the achene margins, the tubercle surface often whitish-waxy .
..... *Rh. decurrens*
- 24 Clusters usually compact; achene suborbicular to elliptic, averaging 6-7 transverse ridges; most tubercle bases flat across the achene summit, not decurrent, the tubercle surface usually dark, not waxy *Rh. microcarpa*
- 23 Cluster branches stiff; bristles $\frac{3}{4}$ or less as long as the achene; achene tumid above, somewhat compressed below, 1.0-1.8 mm long, 1.0-1.6 mm wide; tubercle conical-attenuate, the edges somewhat concave.
- 25 Larger culm leaves to 5 mm wide; achenes (1.2-) avg. 1.45 (-1.85) mm long, (1.1-) avg. 1.4 (-1.75) mm wide; achene surface alveoli longitudinally narrow; tubercle 0.3-0.7 mm long, base 0.6-1.0 mm wide *Rh. recognitum*
- 25 Larger culm leaves to 3 mm wide; achenes (1.0-) avg. 1.3 (-1.5) mm long and wide; if achene surface alveoli longitudinally narrow, then tubercle 0.2-0.4 mm long and base 0.5-0.7 mm wide (*R. globularis*).
- 26 Longer bristles $\frac{1}{2}$ - $\frac{3}{4}$ ($-\frac{3}{4}$) \times the length of the achene; achene surface alveoli longitudinally narrow (typically 0.02-0.05 mm wide between the longitudinal walls), the latitudinal walls raised into horizontal ridges; tubercle 0.2-0.4 mm long, the base 0.5-0.7 mm wide *Rh. globularis*
- 26 Longer bristles $\frac{2}{3}$ -1 \times the length of the achene; achene surface alveoli nearly as wide as long (typically 0.05-0.1 mm wide between the longitudinal walls), the latitudinal walls obscurely or not at all raised into horizontal ridges; tubercle 0.35-0.7 mm long, the base 0.7-0.9 mm wide *Rh. pinetorum*
- 22 Bristles equaling or longer than the tubercle.
- 27 Primary branches of the inflorescence spreading at right angles from the culm, each spikelet or small cluster on slender spreading or reflexed stalks *Rh. miliacea*
- 27 Primary branches of the inflorescence ascending.
- 28 Spikelets 6-9 mm long *Rh. odorata*
- 28 Spikelets < 5 mm long.
- 29 Tubercle 0.4-0.8 mm long, the edges setose or uneven with waxy or crusty irregular protuberances.
- 30 Achene obovate to suborbicular, 1.2-1.6 mm wide, latitudinal alveoli walls strongly raised into transverse ridges.....
..... *Rh. caduca*
- 30 Achene slenderly obovoid, 0.8-1.0 mm wide, latitudinal alveoli walls weakly or not at all raised into transverse ridges *Rh. mixta*
- 29 Tubercle 0.2-0.5 mm long, the edges smooth.
- 31 Spikelets 3.5-4 mm long; bristles exceeding the tubercle; achene 1.3-1.5 mm long, 1.2-1.3 mm wide *Rh. saxicola*
- 31 Spikelets 2.5-3 mm long; longer bristles about equaling the tubercle; achene 0.8-1.2 mm long, 0.7-1.2 mm wide.
- 32 Inflorescence occupying the upper $\frac{1}{4}$ - $\frac{1}{2}$ of the culm, the lowest 2-4 nodes barren *Rh. microcarpa*
- 32 Inflorescence occupying $\frac{2}{3}$ - $\frac{3}{4}$ of the length of the culm, the lowest lateral panicle at the first or second node above the base *Rh. sulcata*

Rhynchospora alba (Linnaeus) Vahl, Northern White Beaksedge. Cp (GA, NC, SC, VA), Mt (GA, NC, VA): mountain bogs and fens, peaty situations in the Coastal Plain, such as low pocosins in peat domes or large Carolina bays, and floating peat mats in limesink (doline) ponds and bay lakes, possibly also in seepage bogs with abundant *Sphagnum*, generally occurring in the most open, harshest, and peatiest areas; rare (GA Special Concern, NC Rare, VA Rare). July-October. Widespread in northern North America, south to se. NC, nw. NC, ne. GA, ne. TN, MN, ID, and CA; disjunct in se. GA (Charlton Co., at the Okefenokee Swamp) (Williges & Loftin 1995), s. AL (Escambia Co.; specimen at CLEMS), and the mountains of Puerto Rico. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Rhynchospora baldwinii A. Gray, Baldwin's Beaksedge. Cp (GA, NC, SC): wet savannas, seepages; uncommon (rare in Sandhills). July-August. Se. NC south to c. FL and west to LA. [= RAB, C, FNA, K, S, GW, Z]

Rhynchospora breviseta (Gale) Channell, Short-bristle Beaksedge. Cp (NC, SC): wet savannas; rare (NC Rare). July-September. Se. NC south to c. FL and west to s. MS; West Indies. This species will colonize disturbances (roadsides, powerline corridors), but not aggressively. The leaf tips of *Rh. breviseta* are acute and minutely serrulate, while those of the closely related *Rh. oligantha* are blunt and smooth; these characters are, however, often difficult to determine. [= RAB, FNA, GW, K; = *Rh. oligantha* A. Gray var. *breviseta* Gale - Z]

Rhynchospora caduca Elliott, Angle-stem Beaksedge. Cp (GA, NC, SC, VA), Pd (NC, SC): savannas, hardwood swamps, other wet areas; uncommon (VA Watch List). July-September. E. and c. VA south to s. FL and west to TX, OK, and AR, north in the interior to sc. TN. This species is found at a few sites in the mountains of GA. See notes under *Rh. miliacea*. [= RAB, C, F, FNA, G, GW, K, W, Z; > *Rh. caduca* - S; > *Rh. patula* A. Gray - S]

Rhynchospora capillacea Torrey. Mt (VA): calcareous wetlands; rare (VA Rare). Newfoundland west to Saskatchewan, south to w. VA, ne. TN, and n. AR. [= C, F, FNA, G, K, Z]

Rhynchospora capitellata (Michaux) Vahl, Brownish Beaksedge. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): bogs and fens, seepages, and wet rock outcrops in the Mountains and upper Piedmont, also in wet habitats in the Coastal Plain of ne. NC and e. VA; common (rare in Piedmont and Coastal Plain). July-September. Widespread in e. North America, south to nc. GA. The only common beaksedge in the Mountains of our area. A somewhat similar species, *Rh. knieskernii*, occurs north of our area, but should be looked for here; they are discussed at the end of this genus. Sorrie (2000) has clarified the relationships and distinctions of this taxon with *Rh. leptocarpa*. [= C, F, G, S, W; < *Rh. capitellata* - RAB, FNA, GW, K, Z (also see *Rh. leptocarpa*)]

Rhynchospora careyana Fernald, Carey's Horned Beaksedge. Cp (GA, NC, SC): limesink (doline) depression ponds and in intermittently flooded depression meadows; rare (NC Watch List). July-September. Apparently ranging from se. NC south to FL, but the range poorly known because of confusion with *Rh. inundata*, from which it is perhaps not specifically distinct. [= FNA, K, S; < *Rh. inundata* - RAB; < *Rh. corniculata* - GW (listed in synonymy under *Rh. corniculata* in GW, but would actually key to *Rh. inundata*)]

Rhynchospora cephalantha A. Gray var. *attenuata* Gale, Small Bunched Beaksedge. Cp (GA?, NC, SC, VA): savannas, sandhill seeps, openings in streamhead pocosins; rare (NC Watch List, VA Rare). July-October. The range of this variety is

poorly known; is reported by Z from NC, SC, AL, and MS. Recent collections from MD and VA extend the range. See discussion in Sorrie et al. (1997). [= Z; < *Rh. cephalantha* – RAB, C, GW, K; < *Rh. axillaris* – S]

Rhynchospora cephalantha A. Gray var. *cephalantha*, Common Bunched Beaksedge. Cp (GA, NC, SC, VA): savannas; common (VA Rare). July-October. S. NJ south to FL and west to LA. Often weedy, this species occurs commonly along wet roadsides, powerline corridors, and the like. [= F, G, Z; < *Rh. cephalantha* – RAB, C, FNA, GW, K; < *Rh. axillaris* – S]

Rhynchospora cephalantha A. Gray var. *pleiocephala* Fernald & Gale, Many-headed Bunched Beaksedge. Cp (GA, NC, SC, VA): savannas; uncommon (VA Rare). July-October. Se. VA south to FL and west to LA. [= F, G, Z; < *Rh. cephalantha* – RAB, C, FNA, GW, K; < *Rh. axillaris* – S]

Rhynchospora chalarocephala Fernald & Gale, Loose-head Beaksedge. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (GA, NC, SC, VA): savannas, limesink ponds, and swamps, often weedy and occurring in abundance on wet roadsides and in powerline corridors; common (rare in Piedmont). July-September. S. NJ south to c. FL and west to LA; disjunct in nw. GA (Jones & Coile 1988) and sc. TN (Coffee County). [= RAB, C, F, FNA, G, GW, K, W, Z]

Rhynchospora chapmanii M.A. Curtis, Chapman's Beaksedge. Cp (GA, NC, SC): savannas, seepage bogs, sandy margins of limesink (doline) ponds, and other wet, acid habitats; uncommon. July-September. Se. NC south to c. FL and west to e. LA; Belize, Nicaragua. [= RAB, FNA, GW, K, S, Z]

Rhynchospora ciliaris (Michaux) C. Mohr, Fringed Beaksedge. Cp (GA, NC, SC): savannas, sandhill seeps; uncommon. July-September. Se. NC south to s. FL and west to LA. [= RAB, FNA, GW, K, S, Z]

Rhynchospora colorata (Linnaeus) H. Pfeiffer, Narrowleaf Whitetop Sedge. Cp (NC, SC, VA): wet savannas, ditches, dune swales; uncommon (VA Rare). May-September. Primarily a Southeastern Coastal Plain endemic: se. VA south to FL and west to TX; Mexico (Tabasco, Chiapas, Yucatán), West Indies, Belize, Guatemala, Costa Rica, Venezuela. [= C, FNA, K; = *Dichromena colorata* (Linnaeus) H. Pfeiffer – RAB, F, G, GW, S]

Rhynchospora compressa Carey ex Chapman. Cp (GA, SC): savannas; rare. S. SC south to FL, west to e. LA. This species was reported for SC (Kartesz 1999), based on the South Carolina Plant Atlas (<http://cricket.biol.sc.edu/herb/>); McMillan (pers. comm.) states that the record is in error, based on a misidentified specimen. The species occurs in sc. GA (Jones & Coile 1988) and has since been found in SC by McMillan (2003). [= FNA, GW, K, S, Z]

Rhynchospora corniculata (Lamarck) A. Gray var. *corniculata*, Short-bristle Horned Beaksedge. Cp, Pd (GA, NC, SC, VA): pondcypress savannas in Carolina bays, swamp forests, other wetlands; uncommon. July-September. Var. *corniculata* ranges from DE south to FL and west to LA, extending north into KY and MO, also in the West Indies. Var. *interior*, possibly not worth recognition, is distinguished by a shorter and narrower achene, the summit barely broader than the base of the tubercle, and occurs in the Mississippi drainage. [= C, F, G; < *Rh. corniculata* (Lamarck) A. Gray – RAB, FNA, GW, K, S]

Rhynchospora crinitipes Gale, Alabama Beaksedge. Cp (GA, NC): sand-clay bars in bed of small blackwater river in the Sandhills (NC) and Coastal Plain (GA); rare (US Species of Concern, GA Special Concern, NC Endangered). July-September. This very rare species is related to *Rh. filifolia*, but is a coarser plant, readily distinguishable by characters of the achene, culm, and leaves. Anderson (1988) discusses its systematics, habitat, and rarity. It has been reported only from a few locations in s. AL, w. FL, sc. GA, and sc. NC. Sorrie et al. (1997) report its occurrence in NC. [= FNA, GW, K, Z]

Rhynchospora culixa Gale, Georgia Beaksedge. Cp (GA): pine savannas, flatwoods; rare (GA Special Concern). GA and FL. [= K, Z; = *Rh. harveyi* W. Boott var. *culixa* (Gale) Kral – FNA]

Rhynchospora debilis Gale, Savanna Beaksedge. Cp (GA, NC, SC, VA), Mt (GA): savannas, sandhill seeps; uncommon (VA Rare). July-September. Se. VA south to n. FL and west to se. TX (Brown & Marcus 1998). Like a small version of *Rh. fascicularis*, often with several ascending, cespitose culms, each terminated by a single glomerule. [= RAB, C, F, FNA, GW, K, Z]

Rhynchospora decurrens Chapman, Swamp-forest Beaksedge. Cp (GA, NC, SC): swamp forests and river marshes, especially along blackwater rivers; rare (GA Special Concern, NC Rare). July-August. Se. NC south to s. FL and west to s. MS (Sorrie & Leonard 1999). [= RAB, FNA, GW, K, S, Z]

Rhynchospora divergens Chapman ex M.A. Curtis, White-seeded Beaksedge. Cp (GA, NC, SC): wet savannas, especially in exposed sands; rare (NC Rare). May-September. Se. NC south to s. FL and west to se. TX; Bahamas, Mexico (Chiapas), Belize. *Rh. divergens*, *Rh. pusilla*, and *Rh. thornei* are all small, grass-like plants, very similar in appearance to one another. [= RAB, FNA, GW, K, S]

Rhynchospora elliotii A. Dietrich, Elliott's Beaksedge. Cp (GA, NC, SC): savannas, ditches, other wet habitats, often weedy; rare (NC Watch List). July-September. Se. NC south to nw. FL and west to e. TX. The achenes are typically flat or concave on one face, and flat or slightly convex on the other. See note under *Rh. microcarpa*. [= FNA, GW, K; = *Rh. schoenoides* (Elliott) Wood – RAB, S, Z]

Rhynchospora fascicularis (Michaux) Vahl var. *distans* (Michaux) Chapman. Cp (GA, NC, SC, VA): savannas and limesink ponds; rare (VA Rare). June-September. Se. VA south to s. FL and west to s. MS (Sorrie & Leonard 1999); West Indies. Appearing to merge with *Rh. wrightiana* on the outer Coastal Plain of NC. [= F, K, Z; < *Rh. fascicularis* – RAB, FNA, G, GW; = *Rh. distans* (Michaux) Vahl – S]

Rhynchospora fascicularis (Michaux) Vahl var. *fascicularis*, Fascicled Beaksedge. Cp (GA, NC, SC, VA): savannas, limesink ponds, ditches; common in the outer Coastal Plain, less common in the fall-line sandhills (VA Rare). June-September. Se. VA south to s. FL and west to se. TX; West Indies. [= F, K, Z; < *Rh. fascicularis* – RAB, FNA, G, GW; = *Rh. fascicularis* – S]

Rhynchospora fernaldii Gale, Fernald's Beaksedge. Cp (GA): pine flatwoods; uncommon. S. GA south to c. peninsular FL, west to s. MS. [= FNA, GW, K, Z]

Rhynchospora filifolia A. Gray, Threadleaf Beaksedge. Cp (GA, NC, SC, VA): sandy shores of limesink (doline) depressions, especially at the lower margin, savannas; uncommon, rare in the fall-line sandhills (VA Rare). July-September. S. NJ south to c. FL and west to e. TX; Cuba, Mexico (Tabasco), Belize, Nicaragua. [= RAB, C, F, FNA, G, K, S, Z; < *Rh. filifolia* – GW (also see *Rh. harperi*)]

Rhynchospora globularis (Chapman) Small, Globe Beaksedge. Cp, Pd (GA, NC, SC, VA): sandy or peaty depressions, wet ditches, powerline corridors, savannas; uncommon, rare in Piedmont. June-September. Apparently ranges from DE south to s. FL and west to c. TX and OK; north in the interior to nc. TN; also allegedly in n. CA. Both *Rh. globularis* and *Rh. pinetorum* tend to produce shorter plants with smaller glomerules than *Rh. recognita*. Occasional achenes of *Rh. globularis* exhibit the wide alveoli of *Rh. pinetorum* near the base or summit, with little or no horizontal ridging, but centrally have narrow alveoli with pronounced horizontal ridges. The opposite condition occasionally occurs in *Rh. pinetorum* achenes, with narrow alveoli and horizontal ridging basally or at the summit, but wide alveoli and little or no ridging centrally. [= S; < *Rh. globularis* – RAB, W; = C, F, FNA, G, K, Z; < *Rh. globularis* var. *globularis* – GW]

Rhynchospora glomerata (Linnaeus) Vahl var. *glomerata*, Clustered Beaksedge. Cp, Pd, Mt (GA, NC, SC, VA): savannas, bogs, other wet habitats; common (uncommon in Sandhills, rare in Mountains). July-September. Var. *glomerata* ranges from s. NJ south to n. FL and west to e. TX, and inland in KY, TN, AR, and KS. Var. *angusta* Gale occurs in AR, LA, and e. TX. [= Z; < *Rh. glomerata* – RAB, C, F, FNA, G, GW, K, S, W]

Rhynchospora gracilentia A. Gray, Slender Beaksedge. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): savannas, bogs; uncommon (rare in Piedmont and Mountains). July-September. NJ south to n. FL and west to e. TX, north in the inland to nc. TN and AR; Cuba, Mexico (Chiapas), Belize, Nicaragua. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Rhynchospora grayi Kunth, Gray's Beaksedge. Cp (GA, NC, SC, VA): sandhills and other dry, sandy sites; uncommon (VA Rare). June-September. VA south to FL, west to TX. [= RAB, C, F, FNA, G, K, S, Z]

Rhynchospora harperi Small, Harper's Beaksedge. Cp (GA, NC, SC): peaty limesink depression ponds (dolines), from standing water to the upper margins of the pond-shore; rare (GA Special Concern, NC Rare). July-September. Se. NC south to FL and west to s. AL and s. MS (Sorrie & Leonard 1999); disjunct in DE and MD; disjunct in Belize. See Nelson (1993) for first SC record, and LeBlond (1997) for additional information on the species, especially its distribution. [= FNA, K, S, Z; < *Rh. filifolia* – GW]

Rhynchospora harveyi W. Boott, Harvey's Beaksedge. Cp (GA, NC, SC, VA), Mt (GA, NC), Pd (NC): savannas in the Coastal Plain, seepage bogs in the Sandhills, bogs in the Mountains and Piedmont; rare (VA Rare). July-August. Se. VA south to n. FL and west to TX and OK, and north in the interior to nc. TN and MO. [= RAB, C, F, G, GW, K, S, W, Z; = *Rh. harveyi* var. *harveyi* – FNA]

Rhynchospora inexpansa (Michaux) Vahl, Nodding Beaksedge. Cp (GA, NC, SC, VA), Pd (GA): wet savannas, streamhead pocosins where frequently burned, usually in peaty situations, often weedy, colonizing disturbances; common. July-September. Se. VA south to n. FL and west to e. TX and AR; West Indies. [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora inundata (Oakes) Fernald, Narrow-fruit Horned Beaksedge. Cp (NC, SC?), {GA, VA}: in water of limesink dolines and clay-based Carolina bays, usually found in shallow water or at the lower margins of pond-shores, typically producing large colonies; rare (NC Watch List, SC Rare, VA Rare). July-September. Apparently ranging from e. MA south to s. FL and west to LA (the range, however, obscured by confusion with *Rh. careyana*). The relation of this species to *Rh. careyana* and to more northern entities of *Rh. inundata* remain unresolved. [= C, F, FNA, G, GW, K, S; < *Rh. inundata* – RAB (also see *Rh. careyana*)]

Rhynchospora latifolia (Baldwin ex Elliott) Thomas, Broadleaf Whitetop Sedge. Cp (GA, NC, SC): wet savannas; uncommon. May-September. A Southeastern Coastal Plain endemic: se. NC south to FL and west to se. TX; disjunct in sc. TN (Coffee County). [= FNA, K; = *Dichromena latifolia* Baldwin ex Elliott – RAB, S, GW]

Rhynchospora leptocarpa (Chapman ex Britton) Small. Cp (GA, NC, SC): seepage bogs, pocosins, especially in openings; uncommon. E. NC south to Panhandle FL, west to se. LA, in the Coastal Plain. It appears that *Rh. leptocarpa* is a valid species, a southeastern Coastal Plain relative of the more northern and montane *Rh. capitellata* (Sorrie 2000). Its occurrence in NC is reported by Sorrie et al. (1997). [= S; < *Rh. capitellata* – RAB, FNA, GW, K, Z]

Rhynchospora macra (C.B. Clarke) Small, Southern White Beaksedge. Cp (GA, NC, SC): *Sphagnum* bogs in frequently-burned streamhead pocosins, and in sandhill seepage bogs; rare (GA Special Concern, NC Endangered, SC Rare). July-September. Se. NC south to n. FL and west to se. TX; Nicaragua, Puerto Rico. *Rh. macra* is a robust southern relative of *Rh. alba*. Like *Rh. alba* and *Rh. pallida*, it has scales which are at first bright white, "fading" in age to a medium tan or light brown. These three species are thus superficially most distinctive (from other *Rhynchospora*) in June, July, and August. The occurrence of this species in NC and SC is discussed by Sorrie et al. (1997). [= FNA, GW, K, S, Z]

Rhynchospora macrostachya Torrey ex A. Gray var. *colpophila* Fernald & Gale, Virginia Horned Beaksedge. Cp (NC, VA): tidal freshwater marshes; uncommon (NC Watch List). July-September. Endemic to e. MD, e. VA, and ne. NC. [= F; < *Rh. macrostachya* – RAB, C, FNA, G, GW, K, S]

Rhynchospora macrostachya Torrey ex A. Gray var. *macrostachya*, Tall Horned Beaksedge. Cp (GA, NC, SC, VA), Mt (GA): marshes, swamps, upland depression ponds, other wetlands; uncommon (VA Watch List). July-September. E. MA south to FL and west to e. TX, north in the interior to sc. TN, s. MI, MO, and KS; disjunct (historically) in s. ME. This (and var. *colpophila*) are most readily distinguished from *Rh. corniculata*, *Rh. inundata*, and *Rh. careyana* by the large glomerules composed of numerous spikelets. [= F; < *Rh. macrostachya* – RAB, C, FNA, G, GW, K, S]

Rhynchospora megalocarpa A. Gray, Sandhill Beaksedge. Cp (GA, NC, SC): xeric sandhills; uncommon. June-August. Se. NC south to FL, west to MS. [= RAB, FNA, K, Z; = *Rh. dodecandra* Baldwin ex A. Gray – S]

Rhynchospora microcarpa Baldwin ex A. Gray, Southern Beaksedge. Cp (GA, NC, SC), Pd (NC, SC): swamp forests, clay-based Carolina bays; rare (GA Special Concern, NC Watch List). July-August. E. NC south to s. FL and west to TX; West Indies (Cuba, Puerto Rico), Bahamas, Belize. This species is easily confused with *Rh. elliottii* and *Rh. perplexa*. *Rh. elliottii* is distinguished by leaves 4-6 mm wide, bristles longer than the tubercle, flattish achene faces, and a tubercle that is longer than broad. *Rh. microcarpa* and *Rh. perplexa* have leaves 1-3 mm wide and tubercles as broad as long or broader. In *Rh. microcarpa*, the achene is biconvex and the bristles are half as long as the achene to equaling the tubercle. In *Rh. perplexa*, the achene faces are flattish and the bristles are absent or rudimentary (< ½ as long as the achene). [= RAB, F, FNA, GW, S, Z; < *Rh. microcarpa* – K (also see *Rh. sulcata*)]

Rhynchospora microcephala (Britton) Britton ex Small, Small-headed Beaksedge. Cp (GA, NC, SC, VA), Mt (GA): savannas, sandhill-pocosin ecotones; common. July-October. S. NJ south to c. FL and west to MS; Cuba. [= RAB, C, F, FNA, G, GW, K, S, Z; = *Rh. cephalantha* A. Gray var. *microcephala* (Britton) Kükenthal]

Rhynchospora miliacea (Lamarck) A. Gray, Millet Beaksedge. Cp (GA, NC, SC, VA): swamp forests, including maritime swamp forests; rare (VA Rare). July-August. Se. VA south to s. FL and west to LA; West Indies. The inflorescence branches of *Rh. mixta* and (less commonly) *Rh. caduca* can spread at right angles from the culm, superficially resembling *Rh. miliacea*. The three can be separated by tubercle length: the tubercle of *Rh. miliacea* is 0.2-0.4 mm long, while those of *Rh. mixta* and *Rh. caduca* are 0.4-0.9 mm long. [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora mixta Britton, Mingled Beaksedge. Cp (GA, NC, SC): swamp forests, marshes; uncommon. June-August. Ne. NC south to c. FL and west to TX. See notes under *Rh. miliacea*. [= RAB, FNA, GW, K, S, Z; > *Rh. mixta* – S; > *Rh. prolifera* Small – S]

Rhynchospora nitens (Vahl) A. Gray, Short-beak Beaksedge. Cp (GA, NC, SC, VA): wet savannas, limesink (doline) ponds, ditches, disturbed wet areas, often weedy; rare (NC Watch List, VA Rare). July-August. Primarily a Coastal Plain endemic: MA south to FL and west to se. TX; lowlands around the Great Lakes; West Indies, Belize, Nicaragua. [= C, FNA, K; = *Psilocarya nitens* (Vahl) Wood – RAB, F, G, GW, S]

Rhynchospora odorata C. Wright ex Grisebach, Fragrant Beaksedge. Cp (GA, NC, SC): maritime swamp forests and maritime wet grasslands; rare (NC Rare). June-August. E. NC south to s. Florida; West Indies and Bahamas. First reported for SC by Nelson & Kelly (1997). [= RAB, F, FNA, GW, K, Z; = *Rh. stipitata* Chapman – S]

Rhynchospora oligantha A. Gray, Feather-bristle Beaksedge. Cp (GA, NC, SC, VA): wet savannas, sandhill-pocosin ecotones, sandhill seepage bogs, sea-level fens, usually in rather peaty, acid places; rare (GA Special Concern, NC Rare, SC Rare, VA Rare). July-August. S. NJ south to n. FL and west to se. TX; Belize, Nicaragua. The leaf tips of *Rh. oligantha* are blunt and smooth, while those of the closely related *Rh. breviseta* are acute and minutely serrulate; these characters are, often difficult to determine, however. Considered to be absent between NC and NJ prior to its discovery in e. VA (Fleming & Ludwig 1996). [= RAB, C, F, FNA, G, GW, K; < *Rh. oligantha* – S (presumably including *Rh. breviseta*): = *Rh. oligantha* var. *oligantha* – Z]

Rhynchospora pallida M.A. Curtis, Pale Beaksedge. Cp (NC, SC, VA): savanna-pocosin and sandhill-pocosin ecotones, peaty seepage bogs, usually growing in or near *Sphagnum*; rare (NC Watch List, SC Rare, VA Rare). July-September. Long Island, NY south through NJ to nc. SC, primarily in NJ and NC. Like *Rh. alba* and *Rh. macra*, it has scales which are at first bright white, "fading" in age to a medium tan or light brown. These three species are thus superficially most distinctive (from other *Rhynchospora*) in June, July, and August. The bristle characters separate the three species easily. See Nelson (1993) for first SC record. [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora perplexa Britton var. *perplexa*, Pineland Beaksedge. Cp (GA, NC, SC), Mt (GA), {VA}: savannas, sandhill seepage bogs; uncommon (VA Rare). July-September. E. NC south to s. FL, west to TX, and north in the interior to ec. TN; West Indies. Also see note under *Rh. microcarpa*. [= F; < *Rh. perplexa* – RAB, C, FNA, G, GW, K, S, Z]

Rhynchospora perplexa Britton var. *virginiana* Fernald, Virginia Pineland Beaksedge. Cp (VA): savannas; rare (VA Rare). July-September. Var. *virginiana* Fernald, alleged to be endemic to se. VA, should be sought in NC. It is alleged to differ in several characters, including larger spikelets (2.5-3.0 mm long vs. 2.0-2.5), the achene tubercles broadly rounded at the tip (rather than deltoid and acute). Also see note under *Rh. microcarpa*. [= F; < *Rh. perplexa* – RAB, C, FNA, G, GW, K, S, Z]

Rhynchospora pinetorum Small, Small's Beakrush. Cp (NC, SC): wet calcareous savannas, maritime wet grasslands; rare. June-September. *Rh. pinetorum* ranges from FL west to MS (Sorrie & Leonard 1999) and LA, apparently disjunct to se. NC and ne. SC, and also in the West Indies. See note under *Rh. globularis*. [= S; = *Rh. globularis* (Chapman) Small var. *pinetorum* (Small) Gale – FNA, GW, K, Z]

Rhynchospora pleiantha (Kükenthal) Gale, Coastal Beaksedge. Cp (GA, NC, SC): sandy margins of limesink depression ponds (dolines), typically in shallow water or at the lower margins of pond-shores; rare (GA Special Concern, NC Rare). July-September. Se. NC south to c. and nw. FL and west to se. AL; also in Cuba. [= RAB, FNA, GW, K, Z; *Rh. fusca* – S, misapplied]

Rhynchospora plumosa Elliott, Plumed Beaksedge. Cp (GA, NC, SC): savannas, sandhill-pocosin ecotones, especially where the sandy surface dries out in summer (on Spodosols such as the Leon soil series); common. July-August. NC south to FL and west to se. TX; West Indies (Cuba), Belize, Honduras, Nicaragua. *Rh. pineticola* C.B. Clarke, from dry sandy pinelands of northern FL, is very similar to *Rh. plumosa*, differing in having leaves 2-3 mm wide and achenes 2.0-2.2 mm long. [= RAB, S; < *Rh. plumosa* – FNA, GW, K, Z]

Rhynchospora punctata Elliott, Pineland Beaksedge. Cp (GA): wet savannas, pitcherplant bogs; rare (GA Special Concern). S. GA south to ne. FL. [= FNA, GW, K, S, Z]

Rhynchospora pusilla Chapman ex M.A. Curtis, Dwarf Beaksedge. Cp (GA, NC, SC), Pd (GA): wet savannas, especially in exposed wet sands of disturbed ground, such as roadsides; uncommon. June-September. E. NC south to s. FL and west to e. TX; West Indies, Mexico (Tabasco, Chiapas), Belize, Guatemala, Nicaragua. *Rh. pusilla*, *Rh. divergens*, and *Rh. thornei* are all small, grass-like plants, very similar in appearance to one another. [= FNA, GW, K; = *Rh. intermixta* C. Wright – RAB, S]

Rhynchospora rariflora (Michaux) Elliott, Few-flower Beaksedge. Cp, Pd (GA, NC, SC, VA): wet savannas, seepage bogs in the Sandhills, bogs in the Piedmont; common, rare in Piedmont (VA Watch List). July-September. S. NJ south to s. FL and west to e. TX; inland in ec. TN; West Indies, Belize, Honduras, Nicaragua. Resembling *Rh. breviseta* and *Rh. oligantha*, but the spikelets conspicuously smaller. A plant tentatively considered distinct from *Rh. rariflora* has been found in wet savannas and pocosin ecotones in Carteret County, NC; it differs most notably in its distinctly larger achenes and longer tubercles and bristles. It can be distinguished from *Rh. rariflora* as follows: achene 1.36-1.8 mm long, 1.4-1.5 mm wide; tubercle 0.6-1.0 mm long; bristles 2/3-4/5 as long as the achene body (vs. 1.3-1.5 (-1.7) mm long, 1.1-1.4 mm wide; tubercle 0.3-0.6 (-0.7) mm long; bristles 1/3-1/2 (-2/3) as long as the achene body). [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora recognita (Gale) Kral, Cymose Beakrush. Cp, Pd, Mt (GA, NC, SC, VA): wet to dry low grounds, diabase glades, ditches, powerline corridors, savannas, moist seepage on rock outcrops, other wet areas; common. June-September. NJ south to FL, west to TX, north in the interior to nc. TN and around the Great Lakes; CA; West Indies; and Central America. As explained by Kral (1999), this taxon appears to warrant specific status. [= FNA, K; = *Rh. globularis* (Chapman) Small var. *recognita* Gale – C, F, G, Z; < *Rh. globularis* – RAB, W; < *Rh. globularis* var. *globularis* – GW; *Rh. cymosa* Elliott – S, misapplied]

Rhynchospora saxicola Small. Pd (GA, SC), Cp (GA): seepages on granitic outcrops and Altamaha Grit glades; rare. W. SC south into the Piedmont and rarely Coastal Plain of c. GA and ne. and ec. AL (Kral 1999). [= S; = *Rh. globularis* (Chapman) Small var. *saxicola* (Small) Kükenthal – FNA, K]

Rhynchospora scirpoides (Torrey) A. Gray, Long-beak Beaksedge. Cp (GA, NC, SC, VA): limesink ponds, usually at the lower margins of pond-shores, wet savannas, beaver ponds, and other wetlands with "drawdown" hydrology; rare (GA Special Concern, NC Rare, VA Rare). July-September. Se. MA south to Panhandle FL and s. MS (Sorrie & Leonard 1999), se. OK and TX (Singhurst, Bridges, & Holmes 2007); disjunct in the lowlands around the Great Lakes. [= C, FNA, K; = *Psilocarya scirpoides* Torrey – RAB, GW, S; > *Psilocarya scirpoides* var. *grimesii* Fernald & Griscom – F, G]

Rhynchospora solitaria R.M. Harper, Autumn Beaksedge. Cp (GA, SC): wet, sandy/peaty depressions; rare (GA Special Concern). Known from a few sites in the Gulf Coastal Plain of GA (Colquitt, Irwin, Tift, and Turner counties) (Sorrie 1998b) and SC (Berkeley County) (McMillan, pers.comm. and specimen at NCU). It resembles a delicate *Rh. ciliaris*; its distinctiveness is well described in Bridges & Orzell (1992). It should be sought in seepage bogs in the fall-line sandhills and in wet savannas of the outer Coastal Plain. [= FNA, GW, K, S, Z]

Rhynchospora stenophylla Chapman, Coastal Bog Beaksedge. Cp (GA, NC, SC, VA): peaty seepage bogs, streamhead pocosins, savanna-pocosin ecotones, usually growing in *Sphagnum*, especially where frequently burned; rare (GA Special Concern, NC Watch List, SC Rare). July-September. Se. NC south to nw. FL and west to s. MS; disjunct in se. VA (Southampton Co.) (Belden et al. 2004). Reported for GA by Sorrie (1998b). [= RAB, FNA, GW, K, S, Z]

Rhynchospora sulcata Gale, Grooved Beaksedge. Cp (GA, SC): limesink ponds (dolines); rare. June-July. Se. SC south to GA (Jones & Coile 1988) and FL. Perhaps not distinct from *Rh. microcarpa*. [= RAB, GW, Z; < *Rh. microcarpa* Baldwin ex A. Gray – K]

Rhynchospora thornei Kral, Thorne's Beaksedge. Cp (GA, NC, SC), Mt (GA): in open sands in savannas underlain by marl, and nearby roadsides, moist limestone barrens and prairies (GA); rare (GA Special Concern, NC Endangered). Known from about 35 locations, in Cp of NC, SC, GA, FL, and AL; also in Ridge and Valley region of AL and GA, and Black Belt region of AL. *Rh. thornei*, *Rh. divergens*, and *Rh. pusilla* are all small, grass-like plants, very similar in appearance to one another, and they frequently co-occur. Recently discovered in SC (Georgetown Co.) by McMillan (2003). [= FNA, K]

Rhynchospora torreyana A. Gray, Torrey's Beaksedge. Cp (GA, NC, SC, VA): savannas, seepage bogs, often weedy; common, uncommon in VA, rare in GA (GA Special Concern). July-September. Se. MA south to GA. [= RAB, C, F, G, GW, K, S, Z]

Rhynchospora tracyi Britton, Tracy's Beaksedge. Cp (GA, NC, SC): cypress savannas and graminoid-dominated depressions, in small, clay-based Carolina bays or shallow limesink ponds (dolines), typically in shallow water or at the lower margins of pond-shores; rare (NC Rare, SC Rare). June-September. A Southeastern Coastal Plain endemic: s. NC south to FL, west to s. MS (Sorrie & Leonard 1999); disjunct in sw. LA; West Indies, Belize. [= RAB, FNA, K, GW, S]

Rhynchospora wrightiana Böckler, Wright's Beaksedge. Cp (GA, NC, SC, VA): wet savannas; rare (NC Watch List, VA Rare). July-September. Se. VA south to c. FL and west to s. AL; West Indies. Appearing to merge with *Rh. fascicularis* var. *distans* on the outer Coastal Plain of NC. Leaves are most frequently filiform and < 1 mm wide; rarely flat and to 1.3 mm wide. [= RAB, FNA, GW, K, Z; < *Rh. wrightiana* – S (also see *Rh. brachychaeta*)]

Rhynchospora brachychaeta C. Wright. Cp (SC): cypress ponds, other depressions; rare. AL, FL, MS, and SC. Reported for SC by P. McMillan (pers. comm.). Kral in FNA considers this species possibly adventive. [= FNA, K, Z; < *Rh. wrightiana* – S]

Rhynchospora curtissii Britton has been reported from SC by Kral (1996) and for NC and SC by Kartesz (1999), but specimens so annotated are misidentified. An East Gulf Coastal Plain endemic, in Panhandle FL, AL, and s. MS (Sorrie & Leonard 1999). [= FNA, GW, K, S, Z]

Rhynchospora fusca (Linnaeus) Aiton f., circumboreal, ranges south in North America to NJ, e. PA (Rhoads & Klein 1993), MD, DE, and WV (FNA, Kartesz 1999). [= C, F, FNA, G, K, Z]

Rhynchospora knieskernii Carey. Pinelands. Endemic in NJ and DE. It has been reported, in error, from SC. [= C, F, FNA, G, K, Z]

Rhynchospora semiplumosa A. Gray, in Coastal Plain of GA. [= S; < *Rh. plumosa* – FNA, GW, K, Z] {needs evaluation}

Rhynchospora species 1. Mt (GA): Coosa Valley prairies; rare. Research by Jim Allison. {not yet keyed}

***Schoenoplectus* (Reichenbach) Palla 1888 (Bulrush)**

A genus of about 50 species, herbs, cosmopolitan in distribution. Micromorphologic and anatomic studies have confirmed earlier opinions based on morphology that *Schoenoplectus* is not closely related to *Scirpus* (Strong 1994, Smith 1995, Schuyler, pers. comm.). Most investigators now also favor the separation of *Bolboschoenus* from *Schoenoplectus* (Pignotti & Mariotti 2004). References: Strong (1994)=Z; Smith (1995)=Y; Smith in FNA (2002b); Goetghebeur in Kubitzki (1998b); Pignotti & Mariotti (2004). [also see *Bolboschoenus*]

- 1 Main involucre bracts 2-8, spreading and foliaceous (the inflorescence thus appearing terminal); rhizomes bearing ovoid tubers; bristles persistent on the achene; achenes 2.5-5 mm long (including body and apiculus) [***Bolboschoenus***]

- 1 Main involucre bract 1 (rarely with an additional 1-2 lateral bracts), erect and terete or triangular, appearing as a continuation of the culm (the inflorescence thus appearing lateral, though in some species the longer inflorescence branches may overtop the bract); rhizomes not bearing tubers; bristles falling from the achene; achenes 1.0-4.5 mm long (including body and apiculus).
- 2 Spikelets on stalks of varying lengths, at least some clearly not sessile.
 - 3 Culms distinctly triangular in cross-section, more sharply so above than below, nearly terete near the base; [section *Malacogeton*] *Sch. etuberculatus*
 - 3 Culms terete throughout, or obscurely triangular above; [section *Schoenoplectus*].
 - 4 Spikelets appearing dull gray-brown, the scales copiously covered with red-brown dots (as seen at 10×) 6-15 mm long; lower and middle scales (3.0-) 3.5-4.0 mm long; culms firm, not easily compressed *Sch. acutus* var. *acutus*
 - 4 Spikelets appearing reddish-brown, the scales not obviously dotted (as seen at 10×), 6-11 mm long; lower and middle scales (2.0-) 2.5-3.0 (-3.5) mm long; culms soft, easily compressed.
 - 5 Perianth bristles plumose; spikelets acute; culms obscurely triangular near the inflorescence *Sch. californicus*
 - 5 Perianth bristles retrorsely barbed; spikelets obtuse; culms terete throughout their length *Sch. tabernaemontani*
 - 2 Spikelets all sessile, in a cluster at one point (rarely with 1 or 2 short branches to 5 mm long).
 - 6 Spikelet solitary; leaves numerous; plant usually aquatic, the culms and leaves flaccid, supported by the water; [section *Malacogeton*]... *Sch. subterminalis*
 - 6 Spikelets (1-) 2-several; leaves 1-4; usually of wet places, but the culms stiff and erect, not floating.
 - 7 Rhizomatous perennial; culms triangular in cross-section, usually 5-20 dm tall.
 - 8 Leaves elongate, > ½ as long as the culms; achenes trigonous; styles 3-branched; [section *Malacogeton*] *Sch. torreyi*
 - 8 Leaves short, < ½ as long as the culms; achenes plano-convex; styles 2 (-3) branched; [*Schoenoplectus pungens* complex of section *Schoenoplectus*].
 - 9 Main involucre bract 1-2.5 (-6) cm long, with no other reduced, scale-like bracts present; mature culms 4-10 mm wide; sides of the culm strongly concave, wing-angled; [strictly of brackish situations in the outer Coastal Plain] *Sch. americanus*
 - 9 Main involucre bract (1-) 3-18 cm long, with 1-2 additional, reduced, scale-like bracts present (resembling enlarged scales but lacking a flower); mature culms 1-6 mm wide; sides of the culm flat, slightly concave, or slightly convex; [of inland fresh and salty situations, widespread in our area] *Sch. pungens* var. *pungens*
 - 7 Cespitose annual or perennial; culms terete, 1-6 dm tall.
 - 10 Perianth bristles absent; achenes 1.2-1.6 mm long, transversely rugose; [section *Supini*].
 - 11 Achenes biconvex to obscurely trigonous, the faces convex *Sch. erectus* ssp. *raynalii*
 - 11 Achenes biconvex, with a planar or concave area on the adaxial surface *Sch. hallii*
 - 10 Perianth bristles 5-6; achenes 1.5-2.0 mm long, smooth, finely pitted, or finely papillose; [section *Actaeogeton*].
 - 12 Achenes 1.75-2.0 mm long, unequally biconvex (rounded on both faces, but less so on one than the other), rounded-obovate, broadly cuneate at the base, rounded at the apex *Sch. purshianus*
 - 12 Achenes 1.5-1.8 mm long, planoconvex (nearly flat on 1 face), obovate, cuneate at the base, subtruncate at the apex *Sch. smithii*

Schoenoplectus acutus (Muhlenberg ex Bigelow) Á. Löve & D. Löve var. *acutus*, Hardstem Bulrush, Great Bulrush. Cp (NC), Mt (VA), Pd (VA): marshes; rare (NC Rare, VA Rare). June-early August; August-October. The species is widespread in temperate North America; var. *acutus* is restricted to e. North America. [= FNA, K, Y; = *Scirpus acutus* Muhlenberg ex Willdenow – RAB, C, F, G, GW, W; ? *Schoenoplectus lacustris* Linnaeus ssp. *glaucus* (Smith) Hartman]

Schoenoplectus americanus (Persoon) Volk ex Schinzus & R. Keller, Olney Threesquare. Cp (GA, NC, SC, VA): tidal freshwater to brackish marshes; rare (NC Watch List). Late May-June; June-September. Nova Scotia west to WA, south to South America. Schuyler (1974) discusses the need to replace the name *S. olneyi* (as traditionally applied) with *S. americanus*, traditionally applied to what must now be called *S. pungens*. Because of this nomenclatural change, the interpretation of much some information and records is now uncertain. [= FNA, K, Z; = *Scirpus americanus* Persoon – C; = *Scirpus olneyi* – RAB, F, G, GW, S]

Schoenoplectus californicus (C.A. Meyer) J. Soják, Giant Bulrush, Southern Bulrush, Tule. Cp (GA, NC, SC): marshes; rare. SC south to FL, west to TX, and extending s. into the New World tropics; on the west coast, from CA southward. [= FNA, K; = *Scirpus californicus* (C.A. Meyer) Steudel – GW, S]

Schoenoplectus erectus (Poiret) Palla ex J. Raynal ssp. *raynalii* (Schuyler) K. Lye. Cp (GA, SC): sandy or peaty, seasonally wet soils (such as on pond shores); rare (GA Special Concern, SC Rare). September-October. Apparently ranging from SC south to n. FL, c. peninsular FL and sw. GA; also in the tropics of both hemispheres. [= FNA, K; < *Scirpus hallii* A. Gray – RAB, misapplied; ? *Scirpus erismaniae* Schuyler – GW; < *Scirpus erectus* Poiret]

Schoenoplectus etuberculatus (Steudel) J. Soják, Swamp Bulrush, Canby's Bulrush. Cp (GA, NC, SC, VA): beaver ponds, on peat in small depression ponds, in flowing blackwater streams; rare (GA Special Concern, NC Rare, VA Rare). July-August; August-September. DE south to n. FL and west to e. TX (the distribution rather discontinuous); substantially disjunct in s. MO and RI. [= FNA, K, Z; = *Scirpus etuberculatus* (Steudel) Kuntze – RAB, C, F, G, GW, S]

Schoenoplectus hallii (A. Gray) S.G. Smith, Sharpshale Bulrush. Cp (GA): pond shores in peaty sands; rare (GA Special Concern). It has also been reported for our area by RAB, and is apparently included in our area by C, as *Scirpus supinus* Linnaeus var. *hallii* (A. Gray) A. Gray, and by others; at least some of these reports are misidentifications of the similar *Sch. erectus*. It is reported for sw. GA by Jones & Coile (1988) and Smith in FNA (2002b). It is very similar to *Sch. erectus*, differing in having the spikelet scales yellow brown (vs. reddish brown) and achenes concave on the ventral surface (vs. bulging on the ventral surface). [= FNA, K; = *Scirpus supinus* Linnaeus var. *hallii* (A. Gray) A. Gray – C; = *Scirpus hallii* A. Gray]

Schoenoplectus pungens (Vahl) Palla var. *pungens*, Common Threesquare, Chairmaker's Rush, Swordgrass. Cp (NC, SC, VA), Pd (NC, VA), Mt (VA), {GA}: marshes, rocky river beds; common. Mid May-June; June-September. The species is circumboreal, ranging in North America from Newfoundland west to AK, south to South America; var. *pungens* is widespread. This taxon has traditionally had the name *Scirpus americanus* applied to it; this name, however, is properly applied to the traditional *Scirpus olneyi*. *Scirpus pungens* (or *Schoenoplectus pungens*) becomes the correct name for this plant (Schuyler

1974). [= FNA, K, Y; < *Scirpus americanus* – RAB, F, G, GW, S, W, misapplied; = *Scirpus pungens* Vahl var. *pungens* – C; < *Schoenoplectus pungens* – Z]

Schoenoplectus purshianus (Fernald) M.T. Strong, Bluntscale Bulrush. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (NC, VA): marshes; common. Late June-August; July-October. ME west to MN, south to nc. GA (Jones & Coile 1988), AL, MS, TN, and KY. [= FNA, K, Z; = *Scirpus purshianus* Fernald – RAB, C, F, GW, W; ? *Scirpus smithii* var. *williamsii* (Fernald) Beetle – G; ? *Scirpus debilis* Pursh – S, misapplied; ? *Scirpus juncoides* Roxburg var. *dignus* (Böckler) T. Koyama; ? *Scirpus juncoides* var. *williamsii* (Fernald) T. Koyama]

Schoenoplectus smithii (A. Gray) J. Soják, Smith's Bulrush, Bluntscale Bulrush. Cp (VA): gravelly intertidal beach; rare (VA Rare). July; Late July-August. Québec west to MN, south to NJ, DE, ne. VA, PA, n. OH, and IL. Reported from mountains of sw. VA. The varieties recognized by Smith in FNA (2002b) are of uncertain value; all three are in or approach our area. Var. *smithii* (south to DE, NJ, and PA) has perianth bristles absent or rudimentary. Var. *levisetus* (with a historic occurrence in VA) has 1-4 perianth bristles, much shorter than to equalling the achene, the bristles smooth or sparsely retrorsely barbed. Var. *setosus* (with records from NC, DE, and MD) has 4-6 perianth bristles, as long as or longer than the achene, and densely retrorsely barbed. [= K, Z; = *Scirpus smithii* A. Gray – C, F; ? *Scirpus smithii* var. *smithii* – G; > *Schoenoplectus smithii* var. *smithii* – FNA; > *Schoenoplectus smithii* var. *setosus* (Fernald) S.G. Smith – FNA; > *Schoenoplectus smithii* var. *levisetus* (Fernald) S.G. Smith – FNA]

Schoenoplectus subterminalis (Torrey) J. Soják, Swaying Rush, Water Bulrush. Cp (GA?, NC, SC, VA), Mt (VA): beaver ponds, bogs, in highly acid water; rare (NC Rare, SC Rare, VA Rare). May-June; June-August. Newfoundland west to s. AK, south to se. NC, nc. SC, GA, panhandle FL, MO, UT (?), and n. CA (the distribution discontinuous, especially southward). [= FNA, K, Z; = *Scirpus subterminalis* Torrey – RAB, C, F, G, GW, S, W]

Schoenoplectus tabernaemontani (C.C. Gmelin) Palla, Softstem Bulrush, Great Bulrush. Cp (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Pd (NC, SC, VA): marshes, sedge meadows, streambeds, riverbeds, calcareous fens; common. June-September. Newfoundland west to AK, south to South America; also in Europe. [= FNA, K, Y; ? *Scirpus validus* Vahl – RAB, C, F, G, GW, S; > *Scirpus validus* var. *validus* – F; *Scirpus validus* var. *creber* Fernald – F; = *Scirpus tabernaemontani* K.C. Gmelin – W; ? *Schoenoplectus validus* (Vahl) A. & D. Löve – Z; ? *Schoenoplectus lacustris* Linnaeus ssp. *validus* (Vahl) T. Koyama var. *validus*; = *Scirpus lacustris* Linnaeus var. *tabernaemontani* (C.C. Gmelin) Döll]

Schoenoplectus torreyi (Olney) Palla, Torrey's Bulrush, Torrey's Threesquare. Mt (VA): sinkhole ponds; rare (VA Rare). New Brunswick west to Manitoba, south to NJ, PA, WV, w. VA, MO, and NE. Known in VA only from natural ponds in Augusta and Rockingham counties. [= FNA, K, Z; = *Scirpus torreyi* Olney – C, F, G, W]

Schoenoplectus deltarum (Schuyler) J. Soják, Delta Bulrush. Brackish marshes and other wetlands, AL and FL west to KS and TX. [= FNA, K; = *Scirpus deltarum* Schuyler] {not yet keyed}

* *Schoenoplectus mucronatus* (Linnaeus) Palla, Rough-seed Bulrush. Weed (native of Eurasia) in rice fields and other disturbed situations, known from old collections in PA, NJ, NY and more recently from KY and TN. [= FNA, K; = *Scirpus mucronatus* Linnaeus] {not yet keyed}

The hybrid *Schoenoplectus etuberculatus* × *subterminalis* has been collected in Hoke Co, NC and Lexington County, SC. It has sterile, malformed achenes.

Scirpus Linnaeus 1753 (Bulrush)

A genus of about 20 species, herbs, of circumboreal distribution, also with species in Australia, Malaysia, and South America. The complex of species including *Sc. atrovirens*, *Sc. georgianus*, *Sc. hattorianus*, *Sc. flaccidifolius* are difficult to identify, and some have doubted their validity. Although further work on this group is needed, they do generally appear to behave as biological species despite their morphological similarity. Schuyler (1967) writes that "the remaining species in the key differ in minute characteristics and often the most satisfactory means of identification is by carefully comparing specimens of them. Despite the close morphological similarity of these species, their characteristics are reasonably constant even in areas where they coexist and occasionally hybridize." References: Whittemore & Schuyler in FNA (2002b); Schuyler (1967)=Z; Strong (1994)=Y; Goetghebeur in Kubitzki (1998b). Key adapted from C, GW, and Z. [also see *Bolboschoenus*, *Isolepis*, *Oxycaryum*, *Schoenoplectus*, and *Trichophorum*]

- 1 Bristles smooth, without teeth along the margins, strongly contorted and greatly exceeding the achenes when extended.
- 2 Scales usually with inconspicuous midribs; mature bristles exceeding the scales and giving the inflorescence a woolly appearance; achenes 0.6-0.9 mm long, yellowish-gray to nearly white *Sc. cyperinus*
- 2 Scales usually with prominent green midribs; mature bristles mostly contained within the scales; achenes 1.0-1.3 mm long, brown to purplish-brown when mature.
- 3 Perianth bristles (extended) shorter than, equal to, or slightly exceeding the achene; mature culms lax, the inflorescences lopping over to (or nearly to) the ground, with 2-3 lateral inflorescences in addition to the terminal one; rays of the inflorescence scabrous, ascending to divergent, with axillary bulblets..... *Sc. lineatus*
- 3 Perianth bristles (extended) exceeding the achene by 2-3×; mature culms rigid, nearly upright, with 0-2 lateral inflorescences in addition to the terminal one; rays of the inflorescence glabrous, ascending, lacking axillary bulblets..... *Sc. pendulus*
- 1 Bristles with retrorse or antrorse teeth along the margins, strongly contorted to nearly straight, shorter than to greatly exceeding the achenes when extended (or bristles absent or nearly so in *Sc. georgianus*).
- 4 Spikelets all solitary with distinct pedicels; mature scales with broad green midribs; achenes with protruding angles and concave sides *Sc. divaricatus*
- 4 Spikelets all or mostly in glomerules with the pedicels scarcely developed; mature scales with midribs not usually green; achenes less sharply trigonous, the sides convex, flat, or slightly concave.
- 5 Culms with 10-20 leaves; spikelets broadly ovate; scales reddish-brown and, excluding the tips, about as wide as long.... *Sc. polyphyllus*

- 5 Culms with 2-10 leaves; spikelets broadly ovate to narrowly ovate; scales brown or black and, excluding the tips, mostly longer than wide.
- 6 Bristle teeth thick-walled and sharp-pointed, densely arranged almost to the base of the bristle.
- 7 Plants cespitose with short, brownish rhizomes; leaf sheaths green throughout; scales broadest above the middle; achenes with well-developed receptacles and firmly attached bristles *Sc. ancistrochaetus*
- 7 Plants spreading with long, reddish rhizomes having conspicuous nodes and internodes; lower leaf sheaths red-tinged near their bases; scales usually broadest below the middle; achenes with poorly-developed receptacles from which the bristles readily detach *Sc. expansus*
- 6 Bristle teeth thin-walled and with rounded tips, mostly restricted to the upper 2/3 of the bristle (or bristles absent or nearly so in *Sc. georgianus*).
- 8 Bristles 0-3, shorter than the achenes; teeth, if present, concentrated near the tips of the bristles *Sc. georgianus*
- 8 Bristles usually 5-6, shorter than to slightly longer than the achenes; teeth extending basally from the tips of all or at least some of the bristles.
- 9 Mature culms lax and reclining with the inflorescences lopping over to (or nearly to) the ground; glomerules usually with < 15 spikelets; lower scales of spikelets slightly mucronate, blackish *Sc. flaccidifolius*
- 9 Mature culms upright or nearly so; glomerules frequently with > 15 spikelets; lower scales of spikelets mucronate, blackish or brownish.
- 10 Lower leaf blades and sheaths usually nodose-septate; spikelets ovate or narrowly ovate; scales mostly brownish; longer bristles frequently exceeding the achenes; achenes 1.0-1.3 mm long *Sc. atrovirens*
- 10 Lower leaf blades and sheaths nearly smooth; spikelets broadly ovate or ovate; scales mostly blackish; longer bristles usually shorter than or about equalling the achenes; achenes 0.8-1.1 mm long *Sc. hattorianus*

Scirpus ancistrochaetus Schuyler, Northeastern Bulrush. Mt (VA): mountain ponds; rare (US Endangered, VA Endangered). July-September. VT, MA, and NY south to PA, e. WV, and w. VA. See Bartgis (1992) and Schuyler (1962) for additional information on this species. [= FNA, K, Z; < *Sc. atrovirens* var. *atrovirens* – C]

Scirpus atrovirens Willdenow, Black Bulrush. Pd, Mt, Cp (GA?, NC, SC, VA): marshes; common. July-September. Newfoundland west to MN, south to GA and TX; disjunct in AZ. [= FNA, K, Z; < *Scirpus atrovirens* – RAB, GW, S, W; < *Sc. atrovirens* var. *atrovirens* – C, F, G]

Scirpus cyperinus (Linnaeus) Kunth, Woolgrass Bulrush. Cp, Mt, Pd (GA, NC, SC, VA): marshes, disturbed wet ground; common. July-September. Newfoundland west to British Columbia, south to FL, e. TX, and OR. The varieties may be worthy of recognition. [= RAB, FNA, GW, K, W; < *Scirpus cyperinus* – C; > *Scirpus cyperinus* var. *cyperinus* – F; > *Scirpus cyperinus* var. *pelius* Fernald – F; > *Scirpus rubricosus* Fernald – F; > *Scirpus cyperinus* – G, S; > *Scirpus eriophorum* Michaux – G, S]

Scirpus divaricatus Elliott. Cp (GA, NC, SC, VA): swamp forests; common, uncommon in VA (VA Watch List). July-September. Se. VA south to n. FL, west to e. TX, s. TN, and s. MO. [= RAB, C, F, FNA, G, GW, K, S, Z]

Scirpus expansus Fernald, Woodland Bulrush. Mt (NC, SC, VA), Pd (GA, NC, SC, VA), Cp (VA): bogs, marshes, streambeds; common (GA Special Concern). July-September. ME west to MI, south to ne. GA and OH. [= RAB, C, F, FNA, G, GW, K, W, Z; < *Scirpus sylvaticus* Linnaeus – S, misapplied]

Scirpus flaccidifolius (Fernald) Schuyler, Reclining Bulrush. Cp (NC, VA): bottomlands; rare (US Species of Concern, NC Rare, VA Rare). July-September. Endemic to se. VA and ne. NC. A recent status survey (Ludwig 1993) found the following characters to be most useful in distinguishing *Sc. flaccidifolius* from *Sc. georgianus* growing in the same region: bristles 1.2-1.4 mm long (vs. absent or mostly < 0.2, rarely to 1.0 mm long in *Sc. georgianus*), spikelets 1.5-2.1 mm wide (vs. 1.1-2.2 mm wide), spikelets 3-9 (-12) per glomerule (vs. 4-23), and inflorescence rays 5.5-17.9 cm long (vs. 3.5-13.5 cm long). Bristle length was the only character which consistently separated the 2 species; other characters showed overlapping values of possibly statistical value. [= FNA, K, Z; < *Scirpus atrovirens* var. *atrovirens* – C; = *Scirpus atrovirens* Willdenow var. *flaccidifolius* Fernald – F]

Scirpus georgianus R.M. Harper, Georgia Bulrush. Mt, Pd (GA, NC, SC, VA): marshes, wet areas, ditches; common. July-September. Prince Edward Island west to NE, south to GA and e. TX. [= FNA, K, S, Z; < *Scirpus atrovirens* – RAB, GW, W; < *Scirpus atrovirens* var. *atrovirens* – C; = *Scirpus atrovirens* Willdenow var. *georgianus* (R.M. Harper) Fernald – F, G]

Scirpus hattorianus Makino, Northern Bulrush. Mt (NC, VA): seepages, ditches, marshes, mostly at moderate to high elevations; uncommon (VA Watch List). July-September. Newfoundland to w. Ontario and WI, south to MD, NC, OH, and IN. [= FNA, K, Z; < *Scirpus atrovirens* – RAB, GW, W; < *Scirpus atrovirens* var. *atrovirens* – C, F, G]

Scirpus lineatus Michaux. Cp (GA, NC, SC, VA): swamp forests over coquina limestone ("marl"); rare (NC Rare, VA Watch List). May-July. Se. VA south to c. FL, west to LA. [= C, FNA, GW, K, Z; = *Scirpus fontinalis* R.M. Harper – RAB, F, S; > *Scirpus fontinalis* var. *virginiana* Fernald – G]

Scirpus pendulus Muhlenberg. Mt (GA, VA), Pd, Cp (NC, SC, VA): wet ground over limestone, diabase, or other circumneutral rocks; rare (NC Rare). June-July. ME west to MN, SD, and CO, south to NC, ne. FL, NM, and n. Mexico. [= C, FNA, GW, K, W, Z; = *Sc. lineatus* – RAB, F, G, S, misapplied]

Scirpus polyphyllus Vahl. Mt, Pd (GA, NC, SC, VA), Cp (VA): marshes, mountain bogs; common. July-September. MA and VT west to IL and s. MO, south to nc. GA (Jones & Coile 1988) and AL. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Scirpus atrocinctus Fernald ranges south to WV (Grant, Hampshire, Harrison, Pendleton, Pocahontas, Randolph, and Tucker counties). It is a northern relative of *Sc. cyperinus*, by some not considered distinct. It differs in having spikelets mostly solitary with distinct pedicels (vs. solitary with distinct pedicels or in glomerules with pedicels scarcely developed), scales usually blackish (vs. reddish-brown to brownish, or rarely blackish), and flowering and maturing achenes roughly a month earlier than nearby *Sc. cyperinus*. [= FNA, K; < *Scirpus cyperinus* (Linnaeus) Kunth – C] {synonymy incomplete; not yet keyed}

Scirpus longii Fernald has been reported as occurring in e. NC by Radford, Ahles, & Bell (1968) and Fernald (1950). This report is in error. It does range south to NJ (Kartesz 1999). [= FNA, C, F, K] {synonymy incomplete; not yet keyed}

Scirpus microcarpus J. & K. Presl ranges south to WV (Monongalia, Pocahontas, Randolph, and Tucker counties). It should key straightforwardly to key lead 21, differing however from all later species in the key in having the styles mostly 2-parted (vs. 3-parted) and the achenes 2-angled (vs. 3-angled). [= FNA, C, K] {synonymy incomplete; not yet keyed}

Scirpus pallidus (Britton) Fernald ranges south to se. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999). [= FNA, K; = *Scirpus atrovirens* Willdenow var. *pallidus* Britton – C] {synonymy incomplete; not yet keyed}

Scirpus pedicellatus Fernald, south to NJ, PA, OH, and KY (Kartesz 1999). [= FNA, K; < *Scirpus cyperinus* (Linnaeus) Kunth – C] {synonymy incomplete; not yet keyed}

Scleria P.J. Bergius 1765 (Nutrahus)
(by Richard J. LeBlond)

A genus of about 250 species, herbs, pantropical, and locally extending into warm temperate regions. This treatment attempts to recognize the stablest and most distinctive *Scleria* entities. Intermediate and otherwise difficult-to-classify specimens are occasionally encountered within some species groups, suggesting hybridization or incomplete speciation. This is particularly true within the *S. ciliata/pauciflora* group (here boldly treated as four species and two varieties). This complex genus likely will continue to challenge and exasperate those who study it. References: Kessler (1987)=Z; Fairey (1967)=Y; Reznicek, Fairey, & Whittemore in FNA (2002b); Core (1936); Goetghebeur in Kubitzki (1998b).

Identification notes: *Scleria* superficially resembles *Rhynchospora* in the field, but mature specimens are readily recognized by the terete white, gray, or black bony achenes. Hardened achenes are necessary for reliable identification to species. In the key, achene length includes hypogynium when present. The scale character applies only to the ultimate bracteate structure clasping the achene.

- 1 Base of achene without hypogynium (a circular, angular, lobed, or tuberculate disk differing in texture and structure from the achene body), the achene base constricted, pitted, and/or ribbed, but appearing as a continuation of the achene body.
 - 2 Inflorescence of 2-9 sessile clusters along an axis up to 13 cm long, the individual spikelets 2-5 mm long; bracts (at least above proximal cluster) setaceous.
 - 3 Plants perennial with rhizomes; leaf blades usually pubescent, 1.5-5 mm wide; bract and scale margins long-ciliate; spikelets 4-5 mm long; achenes smooth *S. distans*
 - 3 Plants annual with fibrous roots; leaf blades glabrous, 0.5-2 mm wide; bract and scale margins eciliate; spikelets 2-3 (-4) mm long; achenes reticulate-papillose to reticulate-verrucose *S. verticillata*
 - 2 Inflorescence of a single cluster, the individual spikelets 4-10 mm long; bracts foliaceous.
 - 4 Triangular base of achene lacking pits in the three concave sides; achene 3-4 mm long *Scl. baldwinii*
 - 4 Triangular base of achene with a pair of pits on each of the three sides; achene 2-3 mm long *Scl. georgiana*
- 1 Base of achene with hypogynium.
 - 5 Achene body smooth (often longitudinally ribbed); hypogynium with 0, 8, or 9 tubercles.
 - 6 Hypogynium with 8 or 9 minutely papillate tubercles *Scl. oligantha*
 - 6 Minutely papillate portion of hypogynium continuous, not divided into separate tubercles.
 - 7 Achene 1-2 mm long; culm 1-2 mm wide at base; leaves 1-3 mm wide *Scl. minor*
 - 7 Achene 2-4 mm long; culm 2.5-6 mm wide at base; leaves 5-9 mm wide.
 - 8 Plants long-rhizomatous to cespitose; sheaths purple to reddish, the ventral surface uniformly pubescent; achenes 2.8-4.0 mm long, 1.35-1.54× as long as wide (averaging 1.45); mostly of dry to dry-mesic habitats *Scl. nitida*
 - 8 Plants cespitose to short-rhizomatous; sheaths brown or stramineous to reddish, glabrous to glabrate on the ventral surface except for a pubescent and often thickened summit; achenes 2.0-3.3 mm long, 1.12-1.38× as long as wide (averaging 1.24); of wet to mesic habitats *Scl. triglomerata*
 - 5 Achene reticulate or papillose, rarely smooth (most often from apparent abortion or abnormal development); hypogynium with 3 tongue-shaped lobes, or 3 or 6 tubercles.
 - 9 Hypogynium of 3 tongue-shaped lobes appressed to the underside of the achene (appearing nearly bract-like); achene reticulate, the pits generally squarish or rectangular and arranged regularly in rows, rarely smooth (apparently by abortion or abnormal development).
 - 10 Achene pubescent (occasionally becoming glabrate); lower lateral inflorescences on long, filiform, usually drooping peduncles; bract of the uppermost lateral inflorescence usually reaching from 1/3-3/4 the length of the terminal internode; terminal internode 6-30 cm long *Scl. muehlenbergii*
 - 10 Achene glabrous; lower lateral inflorescences sessile or on short-erect peduncles; bract of the uppermost lateral panicle usually reaching 3/4 the length of to exceeding the terminal internode; terminal internode 3-8 cm long *Scl. reticularis*
 - 9 Hypogynium with 3 or 6 tubercles; achene papillose, sometimes reticulate (if so, the pits generally variable in shape and not forming regular rows), or rarely smooth.
 - 11 Achenes 1.5-2 mm long, the hypogynium with 6 paired but distinctly separate tubercles.
 - 12 Culms, leaves, and bracts copiously villous-ciliate with spreading hairs 0.5-1 mm long *Scl. pauciflora* var. *caroliniana*
 - 12 Culms, leaves, and bracts glabrous or sparsely hirtellous, but not copiously villous-ciliate *Scl. pauciflora* var. *pauciflora*
 - 11 Achenes 2.0-3.6 mm long, the hypogynium with 3 tubercles, these often 2-lobed, the lobes united (becoming separate in *S.* species 1 with achenes smoothish and > 2.5 mm long).
 - 13 Achenes 2-2.5(-3) mm long, 1.5-2.0(-2.3) mm wide; larger leaves 1-3.5 mm wide; culms, sheaths, blades, and bracts glabrous to moderately pubescent or ciliate.
 - 14 Culms and/or sheaths hairy; blades and bracts ciliate; plants of loamy sands (e.g., ultisols) *Scl. ciliata* var. *ciliata*
 - 14 Culms, sheaths, blades, and bracts glabrous; plants of sandy soils (e.g., spodosols) *Scl. ciliata* var. *glabra*
 - 13 Achenes 2.6-3.3(-3.6) mm long, 2.0-2.6 mm wide; larger leaves 3-7 mm wide; culms, sheaths, blades, and bracts moderately to densely pubescent and/or ciliate; plants usually of loamy soils (e.g., ultisols and alfisols).
 - 15 Herbage pubescent between as well as along primary sheath and adaxial leaf surface nerves and culm angles; most pistillate scales pubescent with appressed hairs 0.1 (-0.2) mm long, the keel similarly pubescent or ciliate with hairs (0.1-)0.2 mm long; achene body distinctly papillose, 2.0-2.4 (-2.5) mm wide, averaging 2.2 mm, the length:width ratio 1.2-1.5 (-1.7); hypogynium with 3 usually lobed tubercles *Scl. elliottii*

- 15 Herbage pubescence restricted to primary sheath and leaf surface nerves and culm angles; pistillate scales glabrous, the keel ciliate with glutinous hairs, the longer 0.5-1.0 mm; achene body smoothish, uneven with low, broad non-papillose rises, (2.3-) 2.4-2.6 mm wide, averaging 2.5 mm, the length:width ratio 1.1-1.25; hypogynium with 3 deeply lobed tubercles, or 6 paired but separate tubercles..... *Scl. species 1*

Scleria baldwinii (Torrey) Steudel, Baldwin's Nutrush. Cp (GA, NC, SC): wet savannas, under *Pinus serotina*, *P. palustris*, and/or *Taxodium ascendens*; rare (NC Rare, SC Rare). June-July. Se. NC south to FL and west to se. TX; also in Cuba and the Bahamas (Sorrie & LeBlond 1997). *S. baldwinii* is a more robust plant, with larger achenes, than *S. georgiana*. [= RAB, FNA, K, GW]

Scleria ciliata Michaux var. *ciliata*, Hairy Nutrush. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC): wet to dry sandy thickets and flatwoods, typically on sandy soil; frequent, rare in the mountains, rare in VA (VA Rare). May-August. VA south to FL, west to MO and TX, and in the West Indies, Mexico, and Central America. [= FNA, S, Y; < *S. ciliata* – RAB, C, F, G, GW, W; < *S. ciliata* var. *ciliata* – K]

Scleria ciliata Michaux var. *glabra* (Chapman) Fairey, Smooth Nutrush. Cp (GA, NC, SC, VA?): savannas and flatwoods; frequent in the outer Coastal Plain of NC and SC. NC (VA?) south to FL, west to TX. *S. ciliata* var. *curtissii* (Britton) Kessler (= *S. pauciflora* Muhl. ex Willd. var. *curtissii* (Britton) Fairey) is currently of uncertain taxonomic standing. It is distinguished by its reticulate, non-papillose achenes, but such a condition has been observed in achenes with the hypogynium lobing of both *S. ciliata* and *S. pauciflora* (as suggested by the synonymy), and may only represent a form or condition. [= FNA, Y, K; > *S. brittonii* Core ex Small – S; < *S. ciliata* – RAB, C, F, G, GW, W; > *S. ciliata* var. *glabra* – K; > *S. ciliata* var. *curtissii* (Britton) Kessler – Z; > *S. pauciflora* Muhl. ex Willd. var. *curtissii* (Britton) Fairey – K]

Scleria distans Poiret in J. Lamarck et al., Riverswamp Nutrush. Cp (GA): moist sandy or peaty soil of pine savannas and flatwoods, boggy areas, and wet openings along roads; rare. May-October. GA and FL west to TX, and in West Indies, Mexico, Central and South America; Africa. [= FNA; ? *S. hirtella* Swartz – GW, K, S, Y, Z, misapplied]

Scleria elliottii Chapman, Broad-leaved Hairy Nutrush. Cp (GA, NC, SC, VA): savannas, flatwoods, pine-oak woodlands, meadows, bogs, and clay-based Carolina bays, typically on loamy sands; occasional. May-September. VA south to FL, west to TX, MO, OK. The descriptions of *S. elliottii* in S and of *S. ciliata* Michaux var. *elliottii* (Chapman) Fernald in F do not include the entity here treated as *S. species 1*. [= S; = *S. ciliata* Michaux var. *elliottii* (Chapman) Fernald – F, FNA, Y; < *S. ciliata* var. *ciliata* – K; < *S. ciliata* – RAB, C, G, GW, W]

Scleria georgiana Core, Georgia Nutrush. Cp (GA, NC, SC): pine savannas, cypress savannas, depression meadows, mostly on the outer coastal plain; rare (NC Rare). June-August. NC south to s. FL, west to TX; and in the West Indies, Central and South America. See note under *S. baldwinii*. [= RAB, FNA, GW, K; = *S. gracilis* Elliott – S (name preoccupied)]

Scleria minor W. Stone, Slender Nutrush. Cp, Mt (NC, SC, VA): wet savannas and peaty seepages in the Coastal Plain and Sandhills, bogs in the Mountains; rare (NC Watch List, VA Rare). June-August. NJ south to FL, west to se. TX. [= RAB, C, F, FNA, G, K, W; < *S. triglomerata* – GW, S]

Scleria muehlenbergii Steudel, Pitted Nutrush. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): open wet sand, pine savannas and flatwoods, depression meadows, cypress savannas, limesink ponds, bogs; common. June-September. NY (Long Island), NJ, and NC south to FL, west to TX, north in the interior to MO and IN; also in the West Indies, Bahamas (Sorrie & LeBlond 1997), Mexico, and Central America. *S. muehlenbergii* is adapted to a variety of freshwater wetland habitats, while *S. reticularis* is primarily restricted to the drawdown zones of limesink (doline) ponds and clay-based Carolina bays. Also see notes under *S. reticularis*. In normal specimens, the achene reticulation ridges are sharp-edged and steeply sloped (compare *S. reticularis*). The achene pubescence is often tawny, and achenes appearing superficially glabrous often have a tawny residue under magnification. [= FNA, K; < *S. reticularis* Michaux – RAB, C, GW, W; = *S. muehlenbergii* – F, orthographic variant; = *S. reticularis* var. *pubescens* Britton – G; = *S. setacea* Poiret – S]

Scleria nitida Willdenow, Shining Nutrush. Cp, Mt, Pd (NC, SC, VA) {GA?} (complete distribution by province by state has yet to be determined): dry sandy or rocky soil of pine/scrub oak woodlands, ridgetop forests at lower elevations in the Mountains such as pine/oak heaths, and heath balds. May-October. MA, VA, and KY south to FL, west to LA and MO (also see note under *S. triglomerata*). *S. flaccida* Steudel, here synonymized because of achene and sheath characters, is a poorly known entity with pendulous capillary axillary peduncles and swamp habitat as in *S. oligantha*, but with an unlobed hypogynium; F gives a range of se. VA to FL and LA. [= G; < *S. triglomerata* Michaux – RAB, C, FNA, GW, K, S, W; > *S. flaccida* Steudel – F; > *S. nitida* – F]

Scleria oligantha Michaux, Few-flowered Nutrush. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): dry to moist forests and woodlands, swamp forests; common. June-September. NJ and MO south to FL and TX, also in Puerto Rico, Mexico, and Central America. The long, filiform, arching lateral peduncles are distinctive. [= RAB, C, F, FNA, G, GW, K, S, W]

Scleria pauciflora Muhlenberg ex Willdenow var. *caroliniana* A. Wood, Carolina Nutrush. Cp (GA, NC, SC, VA?): savannas; uncommon. June-September. NH west to MI, south to n. FL, TN, and MO. [= F, FNA, G, K; < *S. pauciflora* – RAB, C, GW, S, W]

Scleria pauciflora Muhlenberg ex Willdenow var. *pauciflora*, Papillose Nutrush. Cp, Pd, Mt (GA, NC, SC, VA): wet to dry pine flatwoods, pine savannas, depression meadows; common. June-September. NJ west to KS, south to FL and TX, also in Cuba. Typification of *S. pauciflora* is controversial and unresolved at this time (Fairey & Whittemore 1999). [= F, FNA, G, K; < *S. pauciflora* – RAB, C, GW, S, W]

Scleria reticularis Michaux, Netted Nutrush. Cp (GA, NC, SC): limesink ponds, clay-based Carolina bays; rare (NC Rare). June-September. MA south to FL, west to TX, north to IN, MI, and WI. Reports from Mexico are based on *S. muehlenbergii*. See notes under *S. muehlenbergii*. In normal specimens, the achene reticulation ridges are soft-edged and obliquely sloped. Occasional stipitate-capitate fungal growth on the achene has been mistaken for pubescence (a condition perhaps restricted to herbarium specimens), apparently contributing to the unwarranted agglomeration of this distinctive taxon and *S. muehlenbergii*.

There is controversy about typification of the name *Scleria reticularis* (Camelbeke, Reznicek, & Goetghebeur 2003). [= F, FNA, K, S; < *S. reticularis* – RAB, C, GW, W (also see *S. muehlenbergii*); = *S. reticularis* var. *reticularis* – G]

Scleria species 1, Smooth-seeded Hairy Nutrush. Cp, Pd (NC): wet savannas shallowly underlain by coquina limestone in the Coastal Plain, and apparently in diabase glades and barrens in the Piedmont. May-September. Currently known only from Granville, Onslow, and Pender counties, NC. On the Coastal Plain, it is associated with other narrow endemics such as *Thalictrum cooleyi*, *Allium* sp. 1, and *Carex lutea*.

Scleria triglomerata Michaux, Tall Nutrush. Cp, Mt?, Pd (GA, NC, SC, VA): wet to mesic flatwoods, savannas, and hardwood forests; frequent. May-September. VT and Ontario west to MN, south to FL and TX. *S. triglomerata* sensu lato also occurs in Puerto Rico and Mexico, and may include *S. nitida*. [= F, G; < *S. triglomerata* – RAB, C, FNA, GW, K, S, W]

Scleria verticillata Muhlenberg ex Willdenow, Savanna Nutrush. Cp (GA, NC, SC, VA), Mt (VA): wet calcareous savannas of the outer coastal plain, freshwater marshes and maritime wet grasslands on barrier islands influenced by salt spray and shell deposits, wet calcareous or mafic fens or seepages in the mountains, calcareous grasslands; rare (NC Rare, VA Rare). July-September. MA and Ontario west to MN, south to FL and TX, also in the West Indies, Mexico, Central and South America. This species is a distinct calciphile, with only scattered occurrences in or near our area. The roots are strongly fragrant. [= RAB, C, F, FNA, G, GW, K, S]

***Trichophorum* Persoon (Deergrass)**

A genus of about 10 species, herbs, primarily circumboreal, but with disjunct occurrence in montane tropical Asia and montane tropical South America. *Trichophorum* has long been recognized as distinct from *Scirpus* by many authors (especially in Europe and Asia). Molecular and other studies have clearly confirmed that these species are more closely allied to *Eriophorum* than to *Scirpus*, and their removal from *Scirpus* creates a more natural classification (Strong 1994). *Trichophorum* resembles *Eriophorum* in most morphologic characters, and shares with it a generally boreal and north temperate distribution. *Trichophorum alpinum* (Linnaeus) Persoon demonstrates previous confusion over the affinities of the group; it has been variously treated (by those who do not recognize *Trichophorum*) as *Eriophorum alpinum* Linnaeus or *Scirpus hudsonianus* (Michaux) Fernald. References: Crins in FNA (2002b); Strong (1994)=Z; Goetghebeur in Kubitzki (1998b).

- 1 Culms terete or nearly so, smooth; [(in our area) of moderate to high elevation cliffs] ***Tr. caespitosum* ssp. *caespitosum***
 1 Culms sharply triangular in cross-section, the angles scabrous; [plants of low to moderate elevation forests, woodlands, and bluffs] ***Tr. planifolium***

Trichophorum caespitosum (Linnaeus) Schur ssp. *caespitosum*, Deergrass, Deerhair Bulrush. Mt (GA, NC, SC): cliffs receiving fog/cloud deposition and seepage, mostly at high elevations, over amphibolite, granite, gneiss, or schist, notably at Grandfather Mountain, Roan Mountain, Whiteside Mountain, and Chimney Rock; rare (GA Special Concern, NC Rare). July-September. A circumboreal tundra species, south in North America to the mountains of New England and fens in NY, and to n. IL, MN, montane UT, and OR, common in wet tundra and on alpine summits, disjunct (from NY) to about a dozen sites in the Southern Appalachians of w. NC, e. TN, sw. SC, and ne. GA (Jones & Coile 1988). The disjunct southern occurrences are certainly relicts of a more widespread distribution during the Pleistocene. Reported for South Carolina by Hill & Horn (1997) and Hill (1999). [< *Trichophorum caespitosum* – K; > *Scirpus caespitosus* var. *callosus* Bigelow – RAB, F, G; < *Scirpus caespitosus* Linnaeus – C, W; < *Trichophorum caespitosum* – FNA, orthographic variant; < *Scirpus caespitosus* – S; ? *Baeothryon caespitosum* (Linnaeus) A. Dietrich]

Trichophorum planifolium (Sprengel) Palla. Pd, Mt (VA): woodlands, bluffs, forests; uncommon. ME west to Ontario, south to sc. VA, e. WV, KY, OH, and se. MO. See Crins (1989a) for an interesting discussion of this species. [= FNA, K, Z; = *Scirpus verecundus* Fernald – C, F, G, W; = *Scirpus clintonii* – S, misapplied]

DIOSCOREACEAE R. Brown 1810 (Yam Family)

A family of about 3-20 genera and 600-880 species, of tropical and warm temperate regions. References: Raz in FNA (2002a); Huber in Kubitzki (1998a).

***Dioscorea* Linnaeus 1753 (Yam)**

A genus of about 575-850 species, vines, of tropical and warm temperate regions of the Old World and New World. Huber in Kubitzki (1998a) advocates the division of the large and unwieldy *Dioscorea* into separate genera. *Dioscorea* (broadly defined) has a wide variety of economic uses, especially in the tropics, where it is most diverse. Various species are cultivated for their edible tubers (yams, not to be mistaken for sweet potatoes, *Ipomoea batatas*, often referred to colloquially as "yams" in the southern United States), especially in Africa. Oral contraceptives were developed from extracts of *Dioscorea*. Many other uses are described in Al-Shehbaz & Schubert (1989). References: Raz in FNA (2002a); Al-Shehbaz & Schubert (1989)=Y; Ward (1977c)=Z; Huber in Kubitzki (1998a).

- 1 Leaves halberd-shaped or sagittate, the sides with a concave portion (*D. polystachya*) or continuously convex (*D. alata*); aerial tubers often present in the leaf axils; perennial from large, vertically-oriented tubers; [non-native species, usually in disturbed areas, especially in bottomlands]; [section *Enantiophyllum*].

- 2 Stems broadly winged; leaf margins sagittate, the sides continuously convex *D. alata*
- 2 Stems terete, not winged; leaf margins halberd-shaped, the sides with a concave portion *D. polystachya*
- 1 Leaves cordate-ovate, the sides of the leaves continuously convex; aerial tubers never present; perennial from rhizomes < 1.5 cm in diameter; [native species, usually of forests and woodlands]; [section *Macropoda*].
- 3 Staminate inflorescences usually of 1 large and 1-2 smaller secondary panicles in each axil (of upper stem leaves); filaments inwardly curved, ca. 0.4 mm long; anther lobes connate; tepals oblong; [of SC south] *D. floridana*
- 3 Staminate inflorescence a single panicle in each axil (of median or upper leaves); filaments straight, ca. 0.2 mm long; anther lobes separate; tepals ovate; [widespread in our area].
- 4 Lower leaves in whorls of 4-7, upper leaves alternate; stem terete in cross-section; rhizomes 10-15 mm in diameter, often contorted and much-branched *D. quaternata*
- 4 All leaves alternate (rarely the lowermost approximate, with short internodes, and appearing nearly whorled); stem polygonal in cross-section, with 8-14 narrowly-winged ribs; rhizomes 5-10 mm in diameter, usually relatively straight and little-branched *D. villosa*

* *Dioscorea alata* Linnaeus, White Yam, Great Yam. Cp (FL, GA): disturbed areas, in moist soils; rare, native of se. Asia. [= FNA, K, WH, Y, Z]

* *Dioscorea bulbifera* Linnaeus, Air Yam. Cp (FL, LA, MS): disturbed forests, thickets, and banks; uncommon, native of Africa and Asia. [= FNA, K, WH] {add to key; add to synonymy}

Dioscorea floridana Bartlett, Florida Wild Yam. Cp (FL, GA, SC): mesic to dry forests, swampy forests; uncommon. June-July; August-November. SC south to n. FL, on the Coastal plain. *D. floridana* is "the most distinctive of North American species" (Al-Shehbaz & Schubert 1989). [= FNA, K, S, WH, Y, Z; = *D. villosa* Linnaeus var. *floridana* (Bartlett) Ahles – RAB]

* *Dioscorea polystachya* Turczaninow, Cinnamon Vine, Chinese Yam. Mt, Pd (GA, NC, SC, VA), Cp (LA, NC, SC, VA): thickets, disturbed areas, bottomland forests; uncommon, native of China. June-August. [= FNA; = *D. batatas* Decaisne – RAB, C, F, G, W, Z; = *D. oppositifolia* Linnaeus – K, Y, misapplied]

Dioscorea quaternata J.F. Gmelin, Whorled Wild Yam. Mt, Pd (GA, NC, SC, VA), Cp (FL): moist forests; common. April-June; September-October. This species has been shown to be quite distinct from *D. villosa*. It has a more northern and montane range than *D. villosa*, ranging from NJ, NY, s. Ontario, WI, MN, and IA south to n. FL and LA, centered, and most abundant, in the Appalachians. The status of *D. glauca* requires further investigation (see Ward 1977c). [= C, F, G, K, S, Y, Z; < *D. villosa* var. *villosa* – RAB; *D. glauca* Muhlenberg ex Bartlett – S; < *D. villosa* – FNA, W, WH]

Dioscorea villosa Linnaeus, Common Wild Yam. Cp (FL, GA, NC, SC, VA), Pd, Mt? (GA, NC, SC, VA): moist forests and woodlands; uncommon. April-June; September-November. MA and RI south to n. FL, primarily in the Coastal Plain. Various specific and infraspecific taxa are here combined. Ward (1977c) states that "a recent study at Duke University by Shu-fun Au, unfinished due to the death of its author, tentatively recognized *D. hirticaulis* and *D. floridana* but combined all other entities without distinction under *D. villosa*." Further study is needed. Al-Shehbaz & Schubert (1989) indicate that the lectotype of *D. villosa* has pubescent stems; nomenclatural changes are apparently needed, if varietal status of the 2 varieties here recognized proves warranted. [= Y; > *D. villosa* var. *villosa* – C; >< *D. villosa* var. *villosa* – RAB (also see *D. quaternata*); < *D. villosa* – FNA, K, WH; > *Dioscorea villosa* Linnaeus var. *hirticaulis* (Bartlett) Ahles – RAB, C; > *D. hirticaulis* Bartlett – F, G, S, Z; > *D. villosa* – F, G, S, W, Z]

ERIOCAULACEAE Palisot de Beauvois 1828 (Pipewort Family)

A family of about 10 genera and 1100 species, of tropical and warm temperate regions (few in cold temperate regions), especially America, and most diverse in n. South America. References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b).

- 1 Scape glabrous, 10-110 cm tall at maturity; roots thickened, septate (not requiring magnification), unbranched; leaves with obvious air spaces; petals 2, fused below; stamens (3-) usually 4 (-6), the anthers black at maturity *Eriocaulon*
- 1 Scape pubescent (in our species, or very rarely nearly glabrous), 6-40 cm tall at maturity; leaves lacking obvious air spaces; roots fibrous or spongy, not septate; petals 3 or absent; stamens 2-3, the anthers yellow at maturity.
- 2 Scape pubescent with glandular hairs; roots fibrous, branched, dark; heads white, gray, or brown; leaves bright green, tapering gradually through most of their lengths, herbaceous in texture *Lachnocaulon*
- 2 Scape pubescent with glandular hairs (or a mixture of glandular and eglanular hairs); roots spongy, unbranched, pale; heads yellowish-tan or gray; leaves bluish green, narrowly linear to the abruptly flared base, stiff in texture *Syngonanthus*

Eriocaulon Linnaeus 1753 (Pipewort)

A genus of about 400 species, of tropical and warm temperate regions (few in cold temperate areas). References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b). Key based on Kral in FNA (2000).

- 1 Receptacle and/or base of flowers copiously hairy; some or most of perianth parts with chalk white hairs; heads overall appearing white, 5-20 mm in diameter when in full flower or fruit.
- 2 Heads hard (little compressed by a plant press and feeling hard and knotty when squeezed between finger and thumb); leaves dark green, the tip acute to obtuse; scape sheaths shorter than most leaves; involucre bracts straw-colored, the apex acute; receptacular bracteoles pale, the apex narrowly acuminate; pistillate flower petals adaxially glabrescent; terminal cells of club-shaped hairs of the perianth whitened, the basal cells often uncongested and transparent.
- 3 Leaves to 1 cm wide, with acute to rounded tip; heads 7-15 mm in diameter; [widespread in our area] *E. decangulare* var. *decangulare*
- 3 Leaves to 2 cm wide, with rounded tip; heads 13-20 mm in diameter; [of the East Gulf Coastal Plain, known from Panhandle FL and s. AL] *E. decangulare* var. *latifolium*

- 2 Heads soft (much flattened by a plant press, and easily compressed when fresh between finger and thumb); leaves pale green, the tip attenuate-subulate; scape sheaths longer than most leaves; involucre bracts gray or dark, the apex rounded or obtuse; receptacular bracteoles gray to dark gray, the apex acute; pistillate flower petals adaxially villous; all cells of club-shaped hairs on perianth white.
- 4 Mature heads 10-20 mm in diameter; leaves 5-30 cm long; petals of staminate flowers conspicuously unequal; [plants primarily of seasonally flooded ponds] *E. compressum*
- 4 Mature heads 5-10 mm in diameter; leaves (1-) 2-5 (-7) cm long; petals of staminate flower nearly equal *E. texense*
- 1 Receptacle and/or base of flowers glabrous or sparingly hairy; receptacular bracteoles and/or perianth parts glabrous or hairy, the hairs club-shaped, clear or white; heads dark gray or white, 3-4 mm (*E. koernickianum*, *E. parkeri*, and *E. ravenelii*), or 4-10 mm (*E. aquaticum* and *E. lineare*) in diameter when in full flower or fruit.
- 5 Stamens 6; pistil 3-carpellate *E. cinereum*
- 5 Stamens 4; pistil 2-carpellate.
- 6 Heads 4-10 mm in diameter when in full flower or fruit; outer involucre bracts usually reflexed, obscured by bracteoles and flowers.
- 7 Inner involucre bracts, receptacular bracts, and sepals darkened, usually gray to nearly black; young heads dark; seeds very faintly reticulate, not papillate; [of ne. North America] *E. aquaticum*
- 7 All bracts of staminate and pistillate flowers straw-colored or pale with grayish midzone, sepals of pistillate flowers basally pale, darkening toward the tip to grayish, gray-green, or gray-brown; heads (young and mature) pale; seeds faintly rectangular-reticulate, often papillate in lines; [of the se. Coastal Plain] *E. lineare*
- 6 Heads 3-4 mm in diameter when in full flower or fruit; outer involucre bracts neither reflexed nor obscured by bracteoles and flowers.
- 8 Bracts straw-colored, greenish, or light gray to gray, dull, the margins often erose or lacerate, the apex blunt to obtuse; [of tidal waters and large natural lakes of the outer Coastal Plain] *E. parkeri*
- 8 Bracts dark, gray to blackish, very shiny, the margins all nearly entire, the apex acute; [of moist acidic sites].
- 9 Bracts orbicular or broadly oblong, the apex rounded or apiculate; bract margins and apex hairy; perianth hairy; seed not pale-reticulate *E. koernickianum*
- 9 Bracts narrowly ovate to oblong or spatulate, the apex acute; bracts and perianth parts (except sometimes the petals) glabrous; seed conspicuously pale-reticulate *E. ravenelii*

Eriocaulon aquaticum (Hill) Druce, Seven-angled Pipewort. Cp (NC, VA), Mt (VA): ponds, lakes; uncommon. July-October. New Brunswick and Newfoundland west to Ontario and MN, south to e. NC, VA, AL, and IN; also Great Britain and Ireland. The name *E. septangulare* is invalid. *E. aquaticum* is the correct name if the species is interpreted to include both northern European and northeastern North American plants. If North American plants are distinct from European, the correct name is *E. pellucidum*. [= C, FNA, K; > *E. pellucidum* Michaux – RAB; = *E. septangulare* Withering – F, G, GW, W, Z, invalid name]

* *Eriocaulon cinereum* R. Brown, Ashy Pipewort. Pd (SC): drawdown shore of manmade lake; rare, native of Australasia. See Kilpatrick & McMillan (2003). [= FNA, GW, K, Z]

Eriocaulon compressum Lamarck. Cp (FL, GA, NC, SC, VA), Pd (NC), Mt (NC, VA): ponds, lakes, other depressions, wetter places in pine flatwoods and pine savannas; common. June-October. NJ south to s. FL, west to e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, WH, Z]

Eriocaulon decangulare Linnaeus var. *decangulare*, Common Ten-angled Pipewort. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC, SC): wet savannas and pine flatwoods, bogs, seasonally flooded ponds; common. June-October. NJ south to s. FL, west to sw. AR and e. TX; Mexico, Central America. [= FNA, K; < *E. decangulare* – RAB, C, F, G, GW, S, W, WH, Z]

Eriocaulon decangulare Linnaeus var. *latifolium* Chapman ex Moldenke, Panhandle Pipewort. Cp (AL, FL): seepage bogs; rare. Restricted to Panhandle FL, s. AL, and s. MS. It appears to warrant taxonomic status, but needs additional study. [= FNA, K; < *E. decangulare* – GW, S, WH, Z]

Eriocaulon koernickianum van Heurck & Mueller-Aargau, Dwarf Pipewort. Pd (GA): seepage areas on granite flatrocks; rare (GA Special Concern). W. AR and e. OK south to e. TX; disjunct in c. GA. See Watson et al. (2002) for information on variation within the species. [= FNA, K; = *E. koernickianum* – GW, orthographic variant]

Eriocaulon lineare Small. Cp (FL, GA): seepage bogs; rare. Sw. GA south to c. peninsular FL, west to s. AL. It has been reported for NC (Kral in FNA 2000), but this is apparently in error. Kral & Sorrie (1998) proposed the conservation of the name *E. lineare* with a conserved type, as the designated type actually represents *E. texense*; this course was accepted by Brummitt (2005). [= FNA, GW, K, S, WH]

Eriocaulon parkeri B.L. Robinson, Estuary Pipewort. Cp (NC, VA): natural lakes, tidal marshes; uncommon. S. Canada south to e. NC. [= C, F, FNA, G, GW, K, Z]

Eriocaulon ravenelii Chapman. Cp (FL, GA, SC): wet pine savannas; rare. July-September. SC south to s. peninsular and Panhandle FL. [= RAB, FNA, GW, K, S, WH, Z]

Eriocaulon texense Körnick, Texas Hatpins. Cp (FL, GA, NC, SC): sandhill seepage bogs, Altamaha Grit outcrops; rare (GA Special Concern). Sc. NC south to w. Panhandle FL, west to e. TX. [= FNA, GW, K, WH, Z]

Eriocaulon nigrobracteatum E.L. Bridges & Orzell, Dark-headed Hatpins. Cp (FL): seepage bogs; rare. Endemic to the FL Panhandle (Bay, Calhoun, and Gulf counties). [= K, WH] {not yet keyed; add to synonymy}

Lachnocaulon Kunth 1841 (Bogbuttons)

A genus of 7 species, herbs, of se. North America and Cuba. References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b).

- 1 Trichomes at the tips of the receptacular bracts milky white, opaque, the head therefore appearing gray to white, obscuring the brown color of the bractlets.
- 2 Mature heads 4-7 mm across; seeds obviously longitudinally striate (as seen at 10× magnification) *L. anceps*

- 2 Mature heads 3.5-4.0 mm across; seeds not obviously longitudinally striate, the striations obscure and very fine (not visible at 10× magnification).....*L. beyrichianum*
- 1 Trichomes at the tips of the receptacular bracts translucent, the head therefore showing the brown color of the bractlets.
- 3 Scape with ascending hairs..... *L. minus*
- 3 Scape glabrous.
- 4 Leaves 0.5-1 (-2) cm long; head light brown, usually globose; carpels 2.....*L. digynum*
- 4 Leaves 2-3 cm long; head reddish- or dark brown, usually elongate-cylindric; carpels 3.....*L. engleri*

Lachnocaulon anceps (Walter) Morong, Common Bogbuttons. Cp (FL, GA, NC, SC, VA), Pd (GA, NC?), Mt? (GA?): moist to dry sands, moist peats, in pinelands, sometimes locally abundant in open disturbed areas where competition has been removed; common (rare in VA). May-October. S. NJ south to s. FL, west to se. TX; disjunct in ec. TN. [= RAB, C, F, FNA, G, GW, K, WH, Z; > *L. anceps* – S; > *L. floridanum* – S; > *L. glabrum* Körnick – S]

Lachnocaulon beyrichianum Sporleder ex Körnick, Southern Bogbutton. Cp (FL, GA, NC, SC): upper margins of Coastal Plain doline ponds (sometimes under scrub oaks), flatwoods; rare. May-September. Se. NC south to Panhandle FL and s. peninsular FL. [= RAB, FNA, GW, K, S, WH, Z]

Lachnocaulon digynum Körnick, Pineland Bogbutton. Cp (AL, FL, LA, MS): pine savannas, bogs; rare. Panhandle FL and s. AL west to TX. [= FNA, GW, K, S, WH, Z]

Lachnocaulon engleri Ruhland, Engler's Bogbutton. Cp (AL, FL): pondshores, pine savannas; uncommon. N. FL peninsula south to s. FL; Panhandle FL and s. AL. [= FNA, GW, K, S, WH, Z]

Lachnocaulon minus (Chapman) Small, Brown Bogbutton. Cp (FL, GA, NC, SC): upper margins of Coastal Plain doline ponds, other pineland situations; common (uncommon north of FL). May-October. E. NC south to s. peninsular FL, west to Panhandle FL and se. AL. [= RAB, FNA, GW, K, WH, Z; > *L. minus* – S; > *L. eciliatum* Small – S]

Syngonanthus Ruhland 1900 (Yellow Hatpins)

A genus of about 200 species, primarily of tropical America, but some in Africa and Madagascar; ours is the only temperate species. References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b).

Syngonanthus flavidulus (Michaux) Ruhland, Yellow Hatpins, Bantam-buttons. Cp (FL, GA, NC, SC): pine savannas, pine flatwoods, borders of pineland ponds, and adjacent ditches; common (uncommon in GA and SC, rare in NC). May-October. Se. NC south to s. FL, west to s. MS. [= RAB, FNA, GW, K, S, WH, Z]

HAEMODORACEAE R. Brown 1810 (Bloodwort Family)

A family of about 14 genera and 100 species, herbs, of semicosmopolitan distribution, but centered in Australia. The Haemodoraceae is primarily a family of the Southern Hemisphere; *Lachnanthes* is the only member native to e. North America. *Lophiola* has often been treated in the Haemodoraceae; recent evidence, however, indicate that it is better placed in the Nartheciaceae (or Liliaceae *sensu lato*); see *Lophiola* (Nartheciaceae) for additional details. References: Robertson (1976)=Z; Simpson in Kubitzki (1998b); Robertson in FNA (2002a). [also see MELANTHIACEAE]

Lachnanthes Elliott 1816 (Redroot)

A monotypic genus, an herb, of se. North America and the West Indies. References: Simpson in Kubitzki (1998b); Robertson in FNA (2002a); Gandhi (1999)=Y.

Identification notes: A very distinctive plant when in flower, with its densely woolly inflorescence and flowers. When not in flower, recognizable by its equitant (iris-like) base and bright red roots.

Lachnanthes caroliniana (Lamarck) Dandy, Redroot. Cp (FL, GA, NC, SC, VA), Mt (VA): wet savannas, pocosin edges, shores of Coastal Plain depression ponds (and similar ponds in the mountains of Virginia), ditches, wet disturbed ground; common (rare in Mountains, rare in VA). June-early September; September-November. The range is almost strictly on the Coastal Plain, and rather disjunct: s. Nova Scotia, from MA to DE, from se. VA south to s. FL and west to LA, with inland disjunctions in w. VA and se. TN (Coffee County); also in Cuba. The correct spelling of the specific epithet has been disputed; the original spelling was "*caroliniana*," and Gandhi (1999) argues convincingly that it is a correctable typographic error. [= RAB, C, FNA, GW, W, Y; = *Lachnanthes caroliniana* – K, WH, Z, orthographic variant; = *L. tinctoria* (J.F. Gmelin) Elliott – F, G; = *Gyrotheca tinctoria* (J.F. Gmelin) Salisbury – S]

HEMEROCALLIDACEAE R. Brown 1810 (Day-lily Family)

A family of about 13 genera and 50 species, herbs, of temperate, subtropical, and tropical regions. The circumscription of this family is uncertain; it is often treated as monotypic, excluding (for instance) the Phormiaceae. References: Zomlefer (1998, 1999); Clifford, Henderson, & Conran in Kubitzki (1998a).

Hemerocallis Linnaeus 1753 (Day-lily)

A genus of about 15-30 species, temperate, of e. Asia. References: Zomlefer (1998)=Z; Straley & Utech in FNA (2002a).

- 1 Flowers tawny-orange (or many variants thereof), not fragrant; inner tepal margins wavy.....*H. fulva*
 1 Flowers lemon-yellow, fragrant; inner tepal margins planar.....*H. lilioasphodelus*

* *Hemerocallis fulva* (Linnaeus) Linnaeus, Orange Day-lily, Tawny Day-lily. Cp (FL, NC, SC, VA), Pd, Mt (NC, SC, VA), {GA}: commonly cultivated, frequently escaping to forests, streambanks, suburban woodlands, lawns, waste places; common (rare in FL), native of Asia. Late May-early July. [= RAB, C, FNA, G, K, W, WH, Z; > *H. fulva* var. *fulva* – F; > *H. fulva* var. *kwanso* Regel – F]

* *Hemerocallis lilioasphodelus* Linnaeus, Yellow Day-lily, Lemon Day-lily. Pd (NC): less commonly cultivated, only rarely escaping; rare, native of Asia. May-July. [= C, FNA, K, Z; = *H. flava* (Linnaeus) Linnaeus – F, G]

HOSTACEAE B. Mathew 1988 (Hosta Family)

A family of a single genus, of about 25 species, of temperate e. Asia. This family is closely related to the Agavaceae, and its inclusion there may prove warranted. References: Kubitzki in Kubitzki (1998a).

Hosta Trattinick 1812 (Hosta, Plantain-lily)

A genus of about 25-40 herbs, of temperate Asia, widely cultivated (since at least the 8th century), and with numerous cultivars. References: Kubitzki in Kubitzki (1998a); Utech in FNA (2002a). Key based on Utech in FNA (2002a).

- 1 Flowers long-tubular, to 13 cm long, white, fragrant.....*H. plantaginea*
 1 Flowers campanulate to urceolate, 4-5.5 cm long, blue or purplish, not fragrant.
 2 Leaves lanceolate to oblong, 10-17 cm long, 5-7.5 cm wide, with 5-6 lateral veins on each side of the midvein; flowers purplish violet; anthers purple.....*H. lancifolia*
 2 Leaves ovate to cordate, the blade 20-30 cm long, 15-20 cm wide, with 7-9 lateral veins on each side of the midvein; flowers bluish purple; anthers spotted purple.....*H. ventricosa*

* *Hosta lancifolia* Engler, Narrowleaf Plantain-lily. {distr.}: widely planted as a shade ornamental, rarely persistent; common in cultivation, rarely persistent, "native" of Japan (probably only of garden origin). [= FNA, K]

* *Hosta plantaginea* (Lamarck) Ascherson, Fragrant Plantain-lily. {distr.}: widely planted as a shade ornamental, rarely persistent; common in cultivation, rarely persistent, native of China. [= FNA, K]

* *Hosta ventricosa* (Salisbury) Stearn, Blue Plantain-lily. Mt (NC, VA), Pd (VA), {distr.}: widely planted as a shade ornamental, rarely persistent; common in cultivation, rarely persistent, native of China. [= FNA, K]

HYACINTHACEAE Batsch 1786 (Hyacinth Family)

A family of about 67 genera and 900 species, herbs, nearly cosmopolitan. References: Speta in Kubitzki (1998a); Pfosser et al. (2003). [also see *AGAVACEAE*]

- 1 Tepals united into a perianth tube longer than the free portion; [subfamily *Hyacinthoideae*, tribe *Hyacintheae*].
 2 Perianth tube <2 × as long as the lobes; corolla spreading and open at the mouth.....*Hyacinthus*
 2 Perianth tube >2 × as long as the lobes; corolla contracted at the mouth.....*Muscari*
 1 Tepals free or fused only at the extreme base.
 3 Bracts 2 per flower; tepals fused at the extreme base; tepals blue (less commonly white or pink); [subfamily *Hyacinthoideae*, tribe *Hyacintheae*].....*Hyacinthoides*
 3 Bracts 0-1 per flower; tepals free; tepals white, with a greenish stripe on the outer surface; [subfamily *Ornithogaloideae*].....*Ornithogalum*

Hyacinthoides Medikus 1791 (Bluebell)

A genus of 3-4 species, herbs, of se. Europe and n. Africa. The narrow circumscription of *Scilla* (excluding *Hyacinthoides*) is supported by molecular phylogenetic studies (Pfosser et al. 2003). References: Stace (1997)=Z; McNeill in FNA (2002a); Speta in Kubitzki (1998a). Key based on Stace (1997).

- 1 Racemes erect; perianth campanulate; anthers blue.....*H. hispanica*
 1 Racemes pendant at apex; perianth tubular; anthers cream.....*H. nonscripta*

* *Hyacinthoides hispanica* (P. Miller) Rothm., Spanish Bluebell. Pd (NC, VA): persistent after cultivation; rare, native of Europe. [= FNA, K, Z; = *Endymion hispanicus* (P. Miller) Chouard]

* *Hyacinthoides non-scripta* (Linnaeus) Choard ex Rothm., English Bluebell. Pd (VA): persistent after cultivation; rare, native of Europe. [= K, Z; = *Scilla non-scripta* (Linnaeus) Hoffmannsegg & Link – C, G; = *Scilla non-scripta* (Linnaeus) Hoffmannsegg & Link – F; = *Hyacinthoides non-scripta* – FNA, orthographic variant; = *Endymion non-scripta* (Linnaeus) Garcke]

***Hyacinthus* Linnaeus 1753 (Hyacinth)**

A genus of 3 species, herbs, of w. Asia. References: Stace (1997)=Z; Speta in Kubitzki (1998a).

* *Hyacinthus orientalis* Linnaeus, Hyacinth. Pd (VA): persistent after cultivation; rare, native of w. Asia. [= K, Z]

***Muscari* P. Miller 1754 (Grape-hyacinth)**

A genus of about 50 species, herbs, of Europe, Mediterranean areas, and w. Asia. References: Stace (1997)=Z; Straley & Utech in FNA (2002a); Speta in Kubitzki (1998a).

- 1 Raceme 10-20 cm long; pedicels of the terminal flowers > 5 mm long; flowers brown (the lower and fertile) and blue (the upper and sterile); leaves flat, mostly 8-20 mm wide *M. comosum*
- 1 Raceme 1-5 cm long in flower (somewhat longer in fruit); pedicels < 5 mm long; flowers all blue to blue-black; leaves flat, channeled, or terete, mostly 1-8 mm wide.
 - 2 Leaves flat or channeled, 3-8 mm wide..... *M. botryoides*
 - 2 Leaves nearly terete, 1-3 mm wide..... *M. neglectum*

* *Muscari botryoides* (Linnaeus) P. Miller, Compact Grape-hyacinth. Pd (NC, VA), Mt, Cp (VA): cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas; uncommon, native of Europe. March-April; May-June. [= RAB, C, F, FNA, G, K, S, Z]

* *Muscari comosum* (Linnaeus) P. Miller, Tassel Grape-hyacinth. Pd (GA, NC, VA), Cp (VA): cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas; rare, native of Europe. March-April; May-June. [= C, F, FNA, G, K, Z]

* *Muscari neglectum* Gussoni ex Tenore, Grape-hyacinth. Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA), Mt (GA, VA): cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas; common (rare in FL), native of Europe. March-April; May-June. [= FNA, K, WH, Z; = *M. racemosum* (Linnaeus) Lamarck & A.P. de Candolle – RAB, C, F, G, S; ? *M. atlanticum* Boissier & Reuter – W]

***Ornithogalum* Linnaeus 1753 (Star-of-Bethlehem)**

A genus of about 50 species, herbs, of Mediterranean s. Europe, n. Africa, east to w. Asia. References: Straley & Utech in FNA (2002a); Speta in Kubitzki (1998a).

- 1 Lower pedicels < 1 cm long, about as long as the upper pedicels (and shorter than the perianth segments); leaves mostly 8-15 mm wide; scape 2-5 dm tall..... *O. nutans*
- 1 Lowest pedicels 2-6 cm long, longer than the upper pedicels (and longer than the perianth segments); leaves mostly 2-5 mm wide; scape 1-3 dm tall..... *O. umbellatum*

* *Ornithogalum nutans* Linnaeus, Drooping Star-of-Bethlehem. Pd (NC, VA), Cp, Mt (VA): lawns and suburban woodlands; cultivated and rarely naturalized or persistent, native of w. Asia. March-April. [= RAB, C, F, FNA, G, K]

* *Ornithogalum umbellatum* Linnaeus, Star-of-Bethlehem, Snowflake, Nap-at-noon. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (GA, NC, VA): lawns, old fields, bottomlands, forests; commonly cultivated and persistent and naturalizing, native of Europe. March-May. [= RAB, C, F, FNA, G, K, S, W]

HYDROCHARITACEAE A.L. de Jussieu 1789 (Frog's-bit Family)

A family of about 17 genera and 80 species, aquatic herbs, cosmopolitan. The Hydrocharitaceae is here circumscribed traditionally; it should perhaps include *Najas*, as suggested by Haynes, Holm-Nielsen, & Les in Kubitzki (1998b). References: Haynes in FNA (2000), Cook in Kubitzki (1998b).

- 1 Leaves in a basal rosette, either elongate with parallel sides, or petiolate with a leaf blade.
 - 2 Leaves differentiated into petiole and blade, the blade ovate to orbicular *Limnobium*
 - 2 Leaves straplike, elongate, linear, the sides parallel and not differentiated into petiole and blade..... *Vallisneria*
- 1 Leaves in whorls along the stem.
 - 3 Leaves in whorls of 2-3 (no whorls with > 4 leaves)..... *Elodea*
 - 3 Leaves in whorls of 3-8 (some or most whorls with 4 or more leaves).
 - 4 Leaves mostly 2-3 cm long, finely toothed with slender, weak teeth on the margins and rarely also the midrib beneath; fresh leaves not noticeably rough to the touch; leaf whorls generally crowded on all stems; petals white, 9-11 mm long..... *Egeria*

- 4 Leaves mostly 1-2 cm long, toothed with stout, sharp teeth on the margins and also on conical bases along the midrib beneath; fresh leaves noticeably rough to the touch; leaf whorls crowded on terminal portions of stems, remote on older stems; petals translucent, 2-5 mm long..... *Hydrilla*

***Egeria* Planchon 1849 (South American Waterweed)**

A genus of 2 species, aquatic herbs, native of tropical America (now subcosmopolitan in tropical and warm temperate regions by naturalization). References: Haynes in FNA (2000), Cook in Kubitzki (1998b).

* ***Egeria densa*** Planchon, Brazilian Waterweed, "Elodea," "Anacharis." Cp (FL, GA, NC, SC, VA), Mt (GA, NC, SC, VA), Pd (GA, VA): ponds and stagnant water of streams or rivers; uncommon, native of South America. May-November. This is the "Elodea" or "Anacharis" of the aquarium trade. [= RAB, FNA, GW, K, W, WH; = *Elodea densa* (Planchon) Caspary – F; = *Anacharis densa* (Planchon) Victorin – G; = *Philotria densa* (Planchon) Small & St. John – S]

***Elodea* Michaux 1803 (Waterweed)**

A genus of about 5-12 species, aquatic herbs, native of temperate America. References: Haynes in FNA (2000); Cook in Kubitzki (1998b).

- 1 Flowers perfect, with 3 stamens..... [*E. schweinitzii*]
 1 Flowers unisexual, the staminate with 9 stamens.
 2 Well-developed leaves (1-) avg. 2 (-5) mm wide, mostly 2-5× as long as wide; staminate spathe 4-8 (-15) mm long, the flower at anthesis on an elongated, very slender, flexuous stalk; sepals of pistillate flowers 2-4.5 mm long..... *E. canadensis*
 2 Well-developed leaves (0.3-) avg. 1.3 (-2) mm wide, mostly 5-10× as long as wide; staminate spathe 2-3 mm long, the flower at anthesis separating from the spathe (and plant) at maturity; sepals of pistillate flowers 1-1.5 mm long..... *E. nuttallii*

Elodea canadensis Michaux, Common Waterweed. Cp (FL, NC, VA), Pd, Mt (NC, VA), {SC}: lakes, ponds, stagnant waters of streams; common (rare in FL and NC). July-September. Québec west to Saskatchewan, south to NC, Panhandle FL, OK, NM, and CA. [= RAB, C, F, FNA, GW, K, W, WH, WV; = *Anacharis canadensis* (Michaux) Planchon – G; < *Philotria canadensis* (Michaux) Britton – S (also see *E. nuttallii*)]

Elodea nuttallii (Planchon) St. John, Nuttall's Waterweed, Free-flowered Waterweed. Cp, Mt (NC, VA), Pd (VA): lakes, ponds, stagnant waters of streams; uncommon. July-September. ME and Québec west to MN and ID, south to NC, TN, OK, and NM. [= RAB, C, F, FNA, GW, K, W, WV; = *Anacharis nuttallii* Planchon – G; >< *Philotria canadensis* – S; > *Philotria linearis* Rydberg – S]

Elodea schweinitzii (Planchon) Caspary, Schweinitz's Waterweed, is known only from eighteenth century collections in e. PA and NY. Haynes in FNA (2000) rejects it as a valid taxon. [= C, G, K]

***Hydrilla* L.C. Richard 1814 (Hydrilla)**

A monotypic genus, an aquatic herb, native to the Old World. References: Haynes in FNA (2000); Cook in Kubitzki (1998b).

* ***Hydrilla verticillata*** (Linnaeus f.) Royle, Hydrilla. Pd (NC, SC, VA), Cp (GA, NC, VA), Mt (NC, VA): ponds, lakes, rivers; uncommon (but locally very abundant), native of the Old World. June-August. This species has become a serious aquatic weed. Reported for SC by Nelson & Kelly (1997). [= C, FNA, GW, K]

***Limnobiium* L.C. Richard 1814 (Frog's-bit)**

A genus of 1-2 species, of se. North America and tropical America. References: Haynes in FNA (2000); Cook in Kubitzki (1998b).

Limnobiium spongia (Bosc) L.C. Richard ex Steudel, American Frog's-bit. Cp (GA, NC, SC, VA): swamps, marshes, ponds, pools; uncommon. June-September. NJ and MD south to n. FL, west to e. TX, north in the interior in the Mississippi Embayment to s. MO and s. IL; disjunct around the Great Lakes (as in n. IN and w. NY); also in tropical America. Often free-floating, the leaves with prominently large cells below. [= RAB, C, F, FNA, G, GW, K, S]

***Vallisneria* Linnaeus 1753 (Eelgrass)**

A genus of ca. 15 species, aquatic herbs, of tropical and warm temperate regions of the Old and New World. References: Les et al. (2008)=Z; Haynes in FNA (2000); Frère Marie-Victorin (1943)=Y; Cook in Kubitzki (1998b).

- 1 Sepals 2-3 mm long; leaves 5-6 (-10) mm wide; leaves lacking red-purple longitudinal stripes..... *V. americana*

- 1 Sepals 4-5.5 mm long; leaves 15-20 mm wide; leaves with red or purple longitudinal stripes..... *V. neotropicalis*

Vallisneria americana Michaux, Eelgrass, Water-celery, Tapegrass. Cp (FL, GA, NC, SC, VA), Pd (VA), Mt (GA, VA): lakes, rivers, estuaries, sounds; common. July-October. Nova Scotia and Québec west to ND, south to FL, TX, NM, AZ; south into tropical America {or is this all or partly *V. neotropicalis*?}. [= Y, Z; < *V. americana* – FNA, GW, K, WH; ? *V. americana* – RAB, F, G, S, W, WV; ? *V. americana* var. *americana* – C] {add and check synonymy}

Vallisneria neotropicalis Marie-Victorin, Large Eelgrass. Cp (FL): spring runs; other aquatic habitats; uncommon. FL Panhandle, s. FL; Cuba. The distinctiveness of this taxon has been defended by Les et al (2008) on morphological and molecular grounds. [= Y, Z; < *V. americana* – FNA, GW, K, WH] {add synonymy}

HYPOXIDACEAE R. Brown 1814 (Stargrass Family)

A family of about 9 genera and 100-220 species, herbs, subcosmopolitan (though not well distributed in the northern hemisphere of the Old World, and especially diverse in South Africa). The recognition of Hypoxidaceae at the family level is supported by a variety of authors, on morphologic and molecular grounds (see Judd 2000 for summary). References: Nordal in Kubitzki (1998a); Herndon in FNA (2002a); Judd (2000).

Hypoxis Linnaeus 1759 (Stargrass)

A genus of about 50-150 species, herbs, of tropical and warm temperate regions of the Old and New World, with a center of diversity in South Africa. References: Judd (2000)=Z; Herndon in FNA (in prep.); Nordal in Kubitzki (1998a). Key based on Herndon in FNA (2002a).

- 1 Leaves glabrous, or with a few trichomes near the base; seeds black.
- 2 Leaves filiform, 0.3-1.0 mm wide, stiff; floral bracts much smaller than pedicel, often < 1 mm; ovaries densely pubescent; seeds with truncated pebbling..... *H. juncea*
- 2 Leaves over 2 mm wide, soft and flexible; seeds coarsely muricate.
- 3 Ovaries longer than broad, cylindric, with scattered trichomes; floral bracts usually exceeding pedicels; tepals equaling or shorter than ovaries..... *H. curtissii*
- 3 Ovaries as broad as long or nearly so, deltate, densely pubescent; pedicels much longer than bracts or flowers; tepals much longer than ovaries..... *H. hirsuta*
- 1 Leaves evenly pubescent, at least near the base; seeds black or brown.
- 4 Pedicels much longer than bracts or flowers; seeds black.
- 5 Leaves flattened, > 1 mm wide; seeds coarsely muricate..... *H. hirsuta*
- 5 Leaves filiform, 0.3-12.0 mm wide; seeds with truncated pebbling *H. juncea*
- 4 Pedicels < 2× as long as subtending bracts; seeds black or brown.
- 6 Anthers greater than 2 mm long; flowers much longer than pedicels; floral bracts exceeding pedicels; seeds with round pebbling, black .
..... *H. rigida*
- 6 Anthers < 2 mm long; {floral bracts character}; seeds muricate and brown, **or** with rounded pebbling and black-iridescent.
- 7 Tepals 1.5-2× as long as ovaries; seeds pebbled, black but with iridescent membranous coats..... *H. sessilis*
- 7 Tepals ca. 1 (-1.5)× the length of the ovaries; seeds minutely muricate, dark brown..... *H. wrightii*

Hypoxis curtissii Rose in Small, Swamp Stargrass. Cp (FL, GA, NC, SC): swamp forests, alluvial forests, water courses, wet hammocks; common (uncommon north of FL). March-June; May-July. E. NC south to c. peninsular FL, west to e. TX. [= FNA, K, WH, Z; = *H. hirsuta* (Linnaeus) Coville var. *leptocarpa* (Engelmann & A. Gray) Fernald – RAB; < *H. hirsuta* – C; = *H. leptocarpa* (Engelmann & A. Gray) Small – GW]

Hypoxis hirsuta (Linnaeus) Coville, Common Stargrass. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of dry to moist forests; common. March-June; May-July. S. ME west to Saskatchewan and ND, south to GA and e. TX. [= FNA, GW, Z; = *H. hirsuta* var. *hirsuta* – RAB; < *H. hirsuta* – C, K]

Hypoxis juncea Sm., Fringed Stargrass. Cp (FL, GA, NC, SC): wet pine savannas; common (rare north of FL). April-May (-later, especially in response to fire); May-June. (-later, especially in response to fire). Se. NC south to s. FL, west to s. AL. [= RAB, FNA, GW, K, WH, Z]

Hypoxis rigida Chapman, Savanna Stargrass. Cp (FL, GA, NC, SC): wet pine savannas; rare. April (-later, especially in response to fire); May. (-later, especially in response to fire). Se. NC south to Panhandle FL, west to e. TX. [= RAB, FNA, GW, WH, Z; < *H. hirsuta* – K]

Hypoxis sessilis Linnaeus, Glossy-seed Stargrass. Cp (FL, GA?, NC, SC, VA): wet pine savannas; rare. April (-later, especially in response to fire); May (-later, especially in response to fire). NC south to s. FL, west to e. TX, s. AR, and se. OK. [= RAB, FNA, GW, K, WH, Z; > *H. longii* Fernald – C; > *H. sessilis* – C]

Hypoxis wrightii (Baker) Brackett, Bristleseed Stargrass. Cp (FL, GA, NC, SC, VA): wet pine savannas; common (uncommon in FL). March-April (-later, especially in response to fire); April-May (-later, especially in response to fire). Se. VA south to s. FL, west to TX; disjunct in the West Indies (Cuba, Bahamas, Jamaica, Hispaniola, Puerto Rico). [= FNA, K, Z; = *H. micrantha* Pollard – RAB, C, GW, misapplied]

IRIDACEAE A.L. de Jussieu 1789 (Iris Family)

A family of about 65-82 genera and 1700-1810 species, herbs, of cosmopolitan distribution (most diverse in s. Africa).

References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

- 1 Inflorescence a spike or panicle of spikes; plants from corms; flowers slightly zygomorphic.
 - 2 Stem usually branched, the inflorescence appearing paniculate; tepals orange to red *Crocsmia*
 - 2 Stem unbranched, the inflorescence a spike; tepals any of a wide range of colors (including orange and red)
 - 3 Inflorescence bent at its base, the inflorescence axis more-or-less horizontal, the flowers facing upwards *Freesia*
 - 3 Inflorescence erect, the flowers facing outwards *Gladiolus*
- 1 Inflorescence an umbellate 1-sided cyme; plants from rhizomes or bulbs; flowers actinomorphic.
 - 4 Leaves planar; plants from rhizomes (or indistinct) or a bulb (in *Iris xiphium*).
 - 5 Style branches broad, petaloid, terminating in paired crests *Iris*
 - 5 Style branches not broad or petaloid.
 - 6 Tepals 16-35 mm long, orange or red; seeds 4-6 mm in diameter *Iris domestica*
 - 6 Tepals 6-15 mm long, blue, purple, lavender, pink, magenta, white, or yellowish-white; seeds 0.6-1.3 mm in diameter .. *Sisyrinchium*
 - 4 Leaves plicate; plants from bulbs.
 - 7 Tepals unequal, the inner whorl < ½ as long as the outer whorl *Herbertia*
 - 7 Tepals nearly equal in length.
 - 8 Style recurved, with 3 flat branches that are < 2 mm long *Calydorea*
 - 8 Style straight, each of the 3 branches further divided into slender lobes
 - 9 Style branches divided for ca. ½ their length; style arms arching over or between the anthers; tepals dark purple [*Alophia*]
 - 9 Style branches divided nearly to base; style arms extending horizontally between the anthers; tepals blue, white in the center [*Nemastylis*]

Alophia Herbert (Propellor-flower)

A genus of ca. 5 species, of sc. North America, Mexico, Central America, and South America. References: Goldblatt in FNA (2002a).

Alophia drummondii (Graham) R.C. Foster, Propellor-flower. MS west to TX and OK; Mexico; Guyana. [= FNA, K; = *Herbertia drummondii* (Graham) Small]

Calydorea Herbert 1843 (Ixia)

A genus of about 8 species, of warm temperate and tropical America. The circumscription relative to *Nemastylis* is uncertain. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Calydorea coelestina (Bartram) Goldblatt & Henrich, Bartram's Ixia. Cp (FL): pine flatwoods; rare. Endemic to ne. FL (Chafin 2000); the single GA record is by P.O. Schallert, a notoriously sloppy collector, and should therefore be discounted unless additional information comes to light. [= FNA, K; = *Salpingostylis coelestina* (Bartram) Small – S; = *C. coelestina* – WH, orthographic variant; = *Nemastylis coelestina* (Bartram) Nuttall; = *Sphenostigma coelestinum* (Bartram) R.C. Foster; = *Ixia coelestina* Bartram]

Crocsmia Planchon 1851 (Montbretia)

A genus of 8-9 species, herbs, native of sub-Saharan Africa. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Dunlop (2004); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

* *Crocsmia xrocsmiiflora* (V. Lemoine) N.E. Brown [*C. aurea* × *pottsii*], Montbretia. Cp (FL, NC, SC): disturbed areas, especially in moist to wet sites, including salt marshes; rare, the parents of the hybrid both native to sub-Saharan Africa. Late June-July. [= FNA, K, WH; = *C. xrocsmiiflora* – RAB, orthographic variant]

Crocus Linnaeus 1753 (Crocus)

A genus of about 80 species, herbs, from Mediterranean Europe to w. China. References: Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Various species of *Crocus* are cultivated and are long-persistent at old house sites. {not keyed or otherwise treated}

Freesia Eklon ex Klatt 1865 (Freesia)

A genus of about 15 species, perennials, natives of s. Africa. References: Goldblatt in FNA (2002a).

* *Freesia alba* (G.L. Meyer) Gumbleton, *Freesia*. Cp (FL): disturbed areas; rare, native of s. Africa. [= FNA, WH; ? *F. corymbosa* (Burmamm f.) N.E. Brown -- K]

***Gladiolus* Linnaeus 1754 (Gladiolus)**

A genus of about 255 species, largely of Africa. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a). Key based on FNA.

- 1 Inner tepals 60-70 mm long *Gl. ×gandavensis*
- 1 Inner tepals < 60 mm long.
 - 2 Tepals white, cream, orange, or red; perianth tube plus dorsal sepal 60-95 mm long [*Gl. dalenii* ssp. *dalenii*]
 - 2 Tepals pink, reddish, or light purple, with white markings on the outer 3 tepals.
 - 3 Anthers 10-13 mm long; capsules oblong, 18-24 mm long; seeds winged *Gl. communis*
 - 3 Anthers ca. 15 mm long; capsules globose, 10-12 mm long; seeds not winged [*Gl. italicus*]

* *Gladiolus communis* Linnaeus, False Corn-flag. Cp (NC, SC), Pd (GA): cultivated as ornamentals; commonly cultivated, rarely persisting or weakly spreading; native of Mediterranean s. Europe and n. Africa. Introduced in TN and KY, as well. [= FNA; > *G. papilio* Hooker – RAB, K, misapplied; > *Gladiolus communis* Linnaeus ssp. *byzantinus* (P. Miller) A. Hamilton – K; > *G. byzantinus* P. Miller]

* *Gladiolus ×gandavensis* Van Houtte [*G. dalenii* × *oppositiflorus*]. Cp (FL, GA, NC, SC, VA), Pd, Mt (NC): cultivated as ornamentals; commonly cultivated, rarely persisting or weakly spreading, native of s. Africa. Goldblatt suggests that as many as 5 species are involved in the origin of the large-flowered garden gladiolus. [= RAB, FNA, K, WH; ? *G. hortulanus* Bailey]

* *Gladiolus dalenii* Van Geel ssp. *dalenii*. Introduced in AL and LA. [= FNA]

* *Gladiolus italicus* P. Miller. Introduced in TN. [= FNA, K; ? *G. segetum* Ker-Gawler]

***Herbertia* Sweet 1827 (Pleat-leaf Iris)**

A genus of about 5 species, herbs, in se. North America and temperate South America. References: Goldblatt in FNA (2002a).

Herbertia lahue (Molina) Goldblatt, Prairie-nymph. Cp (FL, LA, MS): prairies and marshes; rare. AL and FL west to TX; central South America. [= FNA, WH; > *H. lahue* ssp. *caerulea* (Herbert) Goldblatt – K; > *H. caerulea* Herbert – S]

***Iris* Linnaeus 1753 (Iris, Flag, Blackberry-lily)**

A genus of about 225 species, herbs, of Eurasia, n. Africa, and North America. Wilson (2004) suggests that *Belamcanda* is phylogenetically nested within *Iris* and should be included there; Goldblatt & Mabberley (2005) make the appropriate nomenclatural combination. References: Henderson in FNA (2002a); Goldblatt in FNA (2002a); Goldblatt & Mabberley (2005)=Z; Wilson (2004); Goldblatt, Manning, & Rudall in Kubitzki (1998a). Key based on Henderson in FNA (2002a).

Identification notes: the **petals** are usually erect, smaller than the petaloid **sepals** (which are brightly colored, generally reflexed, and marked with a "signal"). The **styles** are also petaloid, arched over the sepals, and 2-cleft at the tip (except in *I. domestica*).

- 1 Plant from an ovoid bulb; [subgenus *Xiphium*] [*I. xiphium*]
- 1 Plant from short to elongate rhizomes.
 - 2 Style branches not broad, petaloid, or crested; seeds black, shiny, exposed at maturity in a blackberry-like cluster *I. domestica*
 - 2 Style branches broad, petaloid, terminating in paired crests; seeds tan to brown, in a capsule.
 - 3 Sepal "signal" (see above) of multicellular hairs (the "beard"), along the midrib of the the claw and the base of the blade; [subgenus *Iris*].
 - 4 Spathes green (or purplish) and herbaceous, with scarios margins *I. germanica*
 - 4 Spathes scarios, silvery-white *I. pallida*
 - 3 Sepal "signal" consisting of contrasting color, ridges, small unicellular hairs, and/or a cockscomb-like crest; [subgenus *Linniris*].
 - 5 Rhizome branches cord-like, with scale-like leaves, enlarging at the apex to produce vegetative leaves, additional branches, and flowering stems.
 - 6 Stems 30-80 cm tall; leaves 30-60 cm long, 0.2-0.7 cm wide; cordlike portions of rhizomes to 4 dm long; [of wetlands]; [section *Linniris*, series *Prismatica*] *I. prismatica*
 - 6 Stems 2-15 cm tall; leaves 10-45 cm long, 0.3-2.5 cm wide; cordlike portions of rhizomes to 2 dm long; [of dry to mesic uplands].
 - 7 Sepals crested with a 3-ridged, toothed crest; leaves 10-25 mm wide, green, falcate; flowers not or only slightly fragrant; rhizomes surficial (one can "pull" them off the ground by gently tugging on the leaves); [generally of mesic and fertile soils]; [section *Lophiris*] *I. cristata*
 - 7 Sepals not crested; leaves 3-13 mm wide, blue-green, straight or nearly so; flowers strongly fragrant; rhizomes deeply buried (not easily "pulled"); [generally of dry and acid soils]; [section *Linniris*, series *Vernae*].
 - 8 Leaves 5-13 mm wide; rhizomes 1-3 cm between offshoots, thus forming clumps; capsules 1.7-3.2 cm long; [primarily of the Mountains, and upper Piedmont, extending into the Coastal Plain in sw. GA and panhandle FL]... *I. verna* var. *smalliana*

- 8 Leaves 3-8 mm wide; rhizomes 5-15 cm between offshoots, thus hardly clump-forming; capsules 1.2-1.8 cm long; [of the Coastal Plain and lower Piedmont, from e. GA northward]..... *I. verna* var. *verna*
- 5 Rhizome branches like the primary rhizome, not as above.
- 9 Petals 1-2 cm long; [section *Linniris*; series *Tripetalae*]..... *I. tridentata*
- 9 Petals 2-9.5 cm long.
- 10 Stems hollow; [section *Linniris*; series *Sibirica*].
- 11 Spathes herbaceous at flowering time; capsule 3.5-5.5 cm long..... *I. sanguinea*
- 11 Spathes scarious at flowering time; capsule 2-3.5 cm long..... *I. sibirica*
- 10 Stems solid.
- 12 Capsules 3-angled or nearly round in cross-section; [section *Linniris*; series *Laevigatae*].
- 13 Perianth yellow *I. pseudacorus*
- 13 Perianths blue-violet (rarely white).
- 14 Flowers 8-15 cm in diameter; leaves 0.5-1.5 cm wide; [alien, cultivated, rarely escaped]..... *I. ensata*
- 14 Flowers 6-8 cm in diameter; leaves 1-4 cm wide; [native].
- 15 "Signal" a greenish-yellow, papillate patch, surrounded by an area of heavily veined purple-on-white; [of VA northward] *I. versicolor*
- 15 "Signal" a bright yellow, pubescent patch.
- 16 Plants to 10 dm tall, usually with 1-2 well-developed branches; capsule 7-11 cm long *I. virginica* var. *shrevei*
- 16 Plants to 6 dm tall, little or not at all branched; capsule 4-7 cm long *I. virginica* var. *virginica*
- 12 Capsules 6-angled or ridged in cross-section; [section *Linniris*; series *Hexagonae*].
- 17 Perianths dull copper or orange-brown (or dark yellow) (fading in nature or drying in the herbarium to a bluish or purplish color); petals spreading or declining *I. fulva*
- 17 Perianths blue-violet (rarely white); petals erect to spreading.
- 18 Stems declining or semi-erect, sharply zigzag *I. brevicaulis*
- 18 Stems erect, slightly if at all zigzag.
- 19 Capsules 2.5-3.5 cm long, hexagonal in cross-section, 3 sides flat, the alternating sides with 2 rounded ridges separated by a shallow groove *I. hexagona*
- 19 Capsules 6-10 cm long, slightly to strongly hexagonal in cross-section.
- 20 Capsules with 6 broad rounded lobes, indehiscent..... [*I. giganteaerulea*]
- 20 Capsules with 6 sharp, winglike ridges, dehiscent..... *I. savannarum*

Iris brevicaulis Rafinesque, Short-stem Iris, Lamance Iris. Cp (FL), {AL, GA, KY, TN}: swamps, bottomlands, bogs, seeps, marshes; rare. OH west to KS, south to Panhandle FL and TX. [= C, F, FNA, G, GW, K, WH; > *I. foliosa* Mackenzie & Bush – S; > *I. mississippiensis* Small – S]

Iris cristata Aiton, Dwarf Crested Iris. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): April-May; June-July. MD west to IN and MO, south to NC, AL, MS, AR, and e. OK. [= RAB, C, F, FNA, G, K, W; = *Neubeckia cristata* (Aiton) Alefani – S]

* *Iris domestica* (Linnaeus) Goldblatt & Mabberley, Blackberry-lily. Pd (GA, NC, SC, VA), Mt (NC, SC, VA), Cp (FL, GA): dry woodlands, forests, edges of granitic flatrocks, suburban areas; rare, native of e. Asia. June-August. [= Z; = *Belamcanda chinensis* (Linnaeus) de Candolle – RAB, C, F, FNA, G, K, S, W, WH]

* *Iris ensata* Thunberg, Japanese Iris. Mt (NC): roadsides; rare, cultivated and rarely escaped, native of Japan, n. China, and Sakhalin. Also reported from se. PA (Rhodes & Klein 1993). [= K; *I. kaempferi* Siebold ex Lamarck]

*? *Iris fulva* Ker-Gawler, Red Flag, Copper Iris. Cp (FL, GA): swamp forests, wet hammocks; rare. S. IL, MO, and TN south to GA, w. Panhandle FL, AL, and LA (introduced elsewhere). [= C, F, FNA, G, GW, K, S, WH]

* *Iris germanica* Linnaeus, German Iris, Fleur-de-Lys. Pd (NC, SC, VA), Cp (FL?, VA), Mt (VA), {GA}: roadsides, old homesites, ditches; uncommon, cultivated and rarely persistent or escaped, native of Europe. April-May. [= RAB, C, F, FNA, G; > *I. flavescens* Delile – K; > *I. xgermanica* – K]

Iris hexagona Walter, Anglepod Blue Flag. Cp (FL, GA, SC): swamps; uncommon (rare in GA and SC). May-June. SC south to s. FL. [= RAB, FNA, GW, S, WH; = *I. hexagona* var. *hexagona* – K; > *I. hexagona* – S; > *I. kimballiae* Small – S; > *I. alabamensis* Small – S]

* *Iris pallida* Lamarck in J. Lamarck et al., Sweet Iris. Cultivated and persistent around buildings in GA and elsewhere (FNA). [= F, FNA, K]

Iris prismatica Pursh ex Ker-Gawler, Slender Blue Iris, Slender Blue Flag. Cp (NC, SC, VA), Pd (VA), Mt (GA, NC): bogs and marshes; rare. May-June; June-July. Nova Scotia south to GA, disjunct in w. NC (Henderson County) and sc. TN (Coffee County). [= RAB, C, FNA, G, GW, K, S, W; > *I. prismatica* var. *prismatica* – F; > *I. prismatica* var. *austrina* Fernald – F]

* *Iris pseudacorus* Linnaeus, Water Flag, Yellow Flag. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (FL, NC, VA): swamps, marshes, streams, ponds; uncommon (rare in FL), cultivated as a water plant, native of Eurasia and Africa. May-June; August-October. [= RAB, C, F, FNA, G, GW, K, S, W, WH]

* *Iris sanguinea* Hornemann ex Donn, Japanese Iris. Mt (NC): roadsides; rare, cultivated and rarely escaped, native of Japan, n. China, Korea, Japan, and w. Russia. [= K]

Iris savannarum Small. {GA}. In GA and FL. [= FNA, S; = *I. hexagona* Walter var. *savannarum* (Small) R.C. Foster – K]

* *Iris sibirica* Linnaeus, Siberian Iris. Pd (VA): cultivated and escaping or persisting near plantings; rare, native of Eurasia (c. and e. Europe west to Lake Baikal). [= FNA, K]

Iris tridentata Pursh. Cp (FL, GA, NC, SC): wet savannas, pine flatwoods, margins of pineland pools; rare. Late May-June; August-October. Se. NC south to ne. FL and Panhandle FL. [= RAB, FNA, GW, K, WH; ? *I. tripetala* – S, misapplied]

Iris verna Linnaeus var. *smalliana* Fernald ex M.E. Edward, Upland Dwarf Iris. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (FL, GA): dry, rocky or sandy woodlands and forests; common (rare in FL). April-May; June-early August. Sc. PA and WV

south to w. NC, e. TN, n. GA, se. GA, Panhandle FL, and AL. [= RAB, F, FNA, K, W, WH; < *I. verna* – C, G; < *Neubeckia verna* (Linnaeus) Alefani – S]

Iris verna Linnaeus var. ***verna***, Coastal Plain Dwarf Iris, Sandhill Iris. Cp, Pd (GA, NC, SC, VA): longleaf pine sandhills, dry, rocky forests and woodlands; common. March-May; May-June. MD south to se. SC and e. GA, primarily on the Coastal Plain, but extending into the Piedmont. [= RAB, F, FNA, K; < *I. verna* – C, G; < *Neubeckia verna* (Linnaeus) Alefani – S]

Iris versicolor Linnaeus, Northern Blue Flag, Poison Flag. Mt, Pd, Cp (VA): {habitat}; uncommon. May-July. Reported as occurring as far south as VA in C, F, and W. [= C, FNA, G, K, S?, W]

Iris virginica Linnaeus var. ***shrevei*** (Small) E. Anderson. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): marshes, swamps, streams; uncommon. May; July-September. Sw. Québec to MN, south to w. NC, n. AL, e. TN, AR, and e. KS. [= C, F, K; < *I. virginica* – RAB, FNA, W; = *I. shrevei* Small – G, S]

Iris virginica Linnaeus var. ***virginica***, Southern Blue Flag. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): marshes, swamps, streams; common (uncommon in FL). April-May; July-September. Se. VA south to c. peninsular FL, west to e. TX, north in the interior to w. TN; disjunct in sc. TN. [= C, F, K; < *I. virginica* – RAB, FNA, W; = *I. virginica* – G, S]

Iris giganticaerulea Small, Giant Blue Iris, in AL, MS, and LA. [= FNA, K; *I. rivularis* Small – S]

* *Iris xiphium* Linnaeus, introduced in c. TN. {investigate} [= K]

Nemastylis Nuttall 1835 (Celestial-lily)

A genus of about 5 species, herbs, of s. North America and Central America. The circumscription relative to *Calydorea* is uncertain. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Nemastylis geminiflora Nuttall, Prairie Celestial, Prairie Pleatleaf. MO and KS south to w. LA and TX; disjunct eastward in AI and MS. [= FNA, K; *Ixia acuta* Bartram; *Nemastylis acuta* Herbert]

Sisyrinchium Linnaeus 1753 (Blue-eyed-grass, Irisette)

A genus of about 80 species, herbs, of the Americas. *Sisyrinchium* is a very difficult genus, with a number of taxonomic questions remaining in our area. References: Cholewa & Henderson in FNA (2002a); Hornberger (1991)=Y; Bicknell (1896, 1899a, 1899b); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

- 1 Perianth urceolate-campanulate, the segments widely flaring; annual; flowers lavender, pink, magenta, white, or yellowish-white; [plants usually occurring in distinctly weedy habitats, such as roadsides and lawns].....***S. rosulatum***
- 1 Perianth stellate-rotate; perennial; flowers blue, violet, or white; [plants occurring in various habitats].
- 2 Inflorescences paired (rarely solitary) and sessile (rarely the outer inflorescence with a peduncle to 7 mm long), closely subtended by a leaf-like bract; outer spathe bract connate 0-1 (-1.5) mm.
 - 3 Stems 1.5-3.4 mm wide, flattened, obviously winged; outer spathe bract 14-30 mm long; capsule 2.8-4.0 mm long; [mainly of the Piedmont and Mountains] ***S. albidum***
 - 3 Stems 0.5-1.0 mm wide, wiry, not winged; outer spathe bract 12-15 mm long; capsules 2.0-3.3 mm long; [of Coastal Plain pinelands]... .. ***S. capillare***
- 2 Inflorescences solitary, terminating the stem or branch, not paired; outer spathe bract connate (0.7-) 2-6 mm.
 - 4 Stems mostly simple, unbranched (sometimes some plants in a population slightly branched).
 - 5 Stems (1.5-) 2.0-3.7 mm wide; capsule 4.0-6.8 mm long ***S. montanum* var. *crebrum***
 - 5 Stems 0.5-1.0 (-2.0) mm wide; capsule 3.2-5.5 mm long ***S. mucronatum***
 - 4 Stems mostly branched, with 1-5 nodes.
 - 6 Stems with 2-5 nodes, the branching dichotomous; tepals white, recurved at maturity (like a miniature, white *Lilium superbum*); [endemic to low to medium elevation forests in the Blue Ridge Escarpment region of sw. NC and nw. SC] ***S. dichotomum***
 - 6 Stems with 1-3 nodes, the branching uneven; tepals violet to blue (rarely white), not notably recurved at maturity; [widespread].
 - 7 Widest stems (0.5-) 0.8-1.9 mm wide.
 - 8 Leaf bases not persistent as a fibrous tuft; capsules dark brown to black, 2.0-4.1 mm long ***S. atlanticum***
 - 8 Leaf bases persistent as a fibrous tuft; capsules light to medium brown, 2.9-4.3 mm long ***S. fuscatum***
 - 7 Widest stems 2.3-5.7 mm wide.
 - 9 First internode equal to or shorter than the longest leaves, or if equalling the leaves then the hyaline margin on the inner spathe bract acute to acuminate; upper stem scabrous [***S. xerophyllum***]
 - 9 First internode equalling or longer than the longest leaves, if equalling the leaves then the hyaline margin of the inner spathe bract broadly obtuse or acute at the apex; upper stem generally glabrous.
 - 10 Leaf bases not persistent or not fibrous; outer spathe bract 18-38 mm long, the margins connate 4-6 mm; capsules dark brown to black, 4.0-7.0 mm long ***S. angustifolium***
 - 10 Leaf bases persistent as a basal tuft of fibers; outer spathe bract 18-26 mm long, the margins basally connate 2-4 mm; capsules tan, 2.5-4.8 mm long ***S. nashii***

Sisyrinchium albidum Rafinesque. March-May. Pd (GA, NC, SC), Mt (GA, NC, SC, VA), Cp (NC), {GA}: woodlands, savannas?, mesic sandhills, open limestone barrens; uncommon (VA Rare). March-May; May-June. S. NY west to s. WI, south to Panhandle FL, and LA. [= C, F, FNA, G, K, Y; < *S. albidum* – RAB, W (also see *S. capillare*); > *S. albidum* – S; > *S. scabrellum* E.P. Bicknell – S]

Sisyrinchium angustifolium P. Miller. March-June. Mt, Pd, Cp (NC, SC, VA), {GA}: woodlands, forests, meadows, sandhill swales; common. March-June; May-July. VT, NH, and s. Ontario west to WI, e. KS, and OH, south to GA, AL, LA, and TX. [= RAB, C, F, FNA, GW, K, W, Y; > *S. angustifolium* – G, S; > *S. graminoides* E.P. Bicknell – G, S]

Sisyrinchium atlanticum E.P. Bicknell, Atlantic Blue-eyed-grass. Cp, Pd, Mt (NC, SC, VA), {GA}: dry, sandy or rocky places; common. March-June; June-August. Nova Scotia and ME west to OH, IN, and MO, south to FL and LA. [= C, F, FNA, G, GW, K, S, W, Y; = *S. mucronatum* var. *atlanticum* (E.P. Bicknell) Ahles – RAB]

Sisyrinchium capillare E.P. Bicknell, Wiry Blue-eyed-grass. Cp (GA, NC, SC, VA): wet pine savannas and flatwoods; uncommon. March-June; May-June. Se. VA south to GA (and FL?), west to AL. [= C, F, FNA, G, GW, K, S; < *S. albidum* – RAB, W]

Sisyrinchium dichotomum E.P. Bicknell, White Irisette, Isothermal Irisette. Mt, Pd (NC, SC): dry to mesic woodlands and forests, usually over mafic rocks (such as amphibolite), at low to moderate elevations (400-1000 m) in the Blue Ridge escarpment; rare (US Endangered, NC Endangered, SC Rare). May-June; June-August. Endemic to Henderson, Polk, and Rutherford counties, NC, and Greenville County, SC. [= FNA, K, W]

Sisyrinchium fuscatum E.P. Bicknell. Cp, Pd (GA, NC, SC, VA): wet pine savannas, marshy areas; common (VA Watch List). Late April-June; June-October. E. VA (or extreme se. PA?) south to FL, west to MS. [= C, FNA, K; > *S. arenicola* E.P. Bicknell – RAB, F, G, GW; > *S. fuscatum* – S; > *S. incrustatum* E.P. Bicknell – S; > *S. rufipes* E.P. Bicknell – S]

Sisyrinchium montanum Greene var. *crebrum* Fernald. Mt (NC?, VA?): {habitat in our area not known}; rare. May-July. Newfoundland and Ontario south to NY. The status of this taxon in our area is not clear. *S. montanum* var. *crebrum* is reported for VA by F, and *S. montanum* (variety not specified) is reported for NC and VA by C and G. FNA considers var. *crebrum* to range south only to NY, and var. *montanum* south only to OH and PA. Herbarium documentation is needed. [= F, K; < *S. montanum* – G; ? *S. angustifolium* – S, misapplied]

Sisyrinchium mucronatum Michaux. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (NC, VA): forests, woodlands, fields; common. April-June; June-July. ME west to Saskatchewan, south to SC, GA, MI, MN. [= C, F, FNA, GW, G, K, S, W; = *S. mucronatum* var. *mucronatum* – RAB]

Sisyrinchium nashii E.P. Bicknell, Nash's Blue-eyed-grass. Cp, Pd (GA, NC, SC), Mt (GA, VA?): woodlands and forests; uncommon. April-June. NC and TN (sw. VA?) south to FL and MS. [= FNA, K, W; > *S. fibrosum* E.P. Bicknell – S]

*? *Sisyrinchium rosulatum* E.P. Bicknell, Lawn Blue-eyed-grass. Cp (GA, NC, SC, VA), Pd (GA, SC): lawns, roadsides; uncommon. April-May; May-June. Se. VA south to FL, west to e. TX. Perhaps only adventive in our area. [= RAB, FNA, GW, K, S, Y; > *S. exile* E.P. Bicknell]

Sisyrinchium campestre E.P. Bicknell, Prairie Blue-eyed-grass. MS and MI west to SD and NM. [= FNA, K] {not yet keyed}

Sisyrinchium corymbosum E.P. Bicknell. Cp (GA): pinelands; rare. Se. GA and ne. FL west to s. AL. See Ward (2005a) for its resurrection. [< *S. atlanticum* Bicknell – FNA, K] {not yet keyed}

Sisyrinchium langloisii Greene ranges east to AL, GA, and TN. It will key to couplet 8, where difficulties will be encountered. Like *S. atlanticum*, its leaf bases are not persistent in a fibrous tuft, but it differs in having the dark ovary and capsules not contrasting strongly with the much lighter foliage. [= FNA; < *S. langloisii* – K (also see *S. pruinosum*)] {not yet keyed}

Sisyrinchium miamiense E.P. Bicknell, reported for SC (Kartesz 1999) and GA, AL, MS, and FL (FNA). {investigate} [= FNA, K] {not yet keyed}

Sisyrinchium pruinosum E.P. Bicknell, ranges east to AL. [= FNA; < *S. langloisii* – K] {not yet keyed}

Sisyrinchium sagittiferum E.P. Bicknell, ranges east to AL (FNA). [= FNA, K] {not yet keyed}

Sisyrinchium xerophyllum Greene, Florida Blue-eyed-grass, occurs in FL and allegedly s. GA; it is also alleged to occur in NC (FNA) but this report does not seem plausible. [= FNA, K, S]

JUNCACEAE A.L. de Jussieu 1789 (Rush Family)

A family of about 8 genera and 350-440 species, herbs (and a few shrubs), largely of temperate regions of the Old and New World. References: Brooks & Clemants in FNA (2000); Balslev in Kubitzki (1998b); Drábková et al. (2003).

- 1 Leaves terete or flat, glabrous (or scabrous); capsule with > 3 seeds; [often in wetlands]..... **Juncus**
 1 Leaves flat, pubescent; capsule with 3 seeds; [rarely in wetlands]..... **Luzula**

Juncus Linnaeus 1753 (Rush)

(by B.A. Sorrie, B. van Eerden, and W.M. Knapp)

A genus of about 250-300 species, herbs, of cosmopolitan distribution. Drábková et al. (2003) indicate that *Juncus trifidus* may not be part of *Juncus*, and may be as closely related to *Luzula*. References: Brooks & Clemants in FNA (2000); Kirschner et al. (2002b, 2002c)= Y; Clemants (1990); Balslev in Kubitzki (1998b); Zika (2003)=Z; Drábková et al. (2003); F; GW; RAB. The key based, in part, on those references.

subgenus *Juncus*, section *Juncus*: *acutus* ssp. *leopoldii*, *roemerianus*

subgenus *Juncus*, section *Graminifolii*: *filipendulus*, *marginatus*, *biflorus*, *longii*, *repens*

subgenus *Juncus*, section *Iridifolii*: *polycephalus*

subgenus *Juncus*, section *Ozophyllum*: *abortivus*, *acuminatus*, *brachycephalus*, *brevicaudatus*, *caesariensis*, *canadensis*, *megacephalus*, *militaris*, *nodosus*, *pelocarpus*, *subcaudatus*, *torreyi*, *trigonocarpus*, *validus* var. *validus*

subgenus *Agathryon*, section *Tenageia*: *bufonius* var. *bufonius*

subgenus *Agathryon*, section *Steirochloa*: *gerardii*, *coriaceus*, [*brachyphyllus*], *georgianus*, *secundus*, *dichotomus*, *tenuis*, *anthelatus*, *interior*, *dudleyi*

subgenus *Agathryon*, section *Juncotypus*: *gymnocarpus*, [*filiformis*], *inflexus*, *effusus* var. *solutus*, *pylaii*, *balticus*

UNCERTAIN placement (probably not a *Juncus*): *trifidus*

Identification Notes: For identification of most rushes, it is important to collect plants with mature capsules and seeds. Care must also be taken to collect specimens with uninjured heads, especially for the group of rushes in Key D; the long beaks of the capsules are often fragile and easily broken off.

- 1 Inflorescence appearing lateral; inflorescence bract erect, appearing to be a continuation of the culm..... **Key A**
- 1 Inflorescence appearing terminal; inflorescence bract not appearing to be a continuation of the culm.
 - 2 Leaf blades non-septate **Key B**
 - 2 Leaf blades septate (sometimes obscure in dried specimens; if so, rest leaf on hard surface and run fingernail over it lengthwise).
 - 3 Mature seeds distinctly tailed with elongate appendages at each end (may be obscure in *J. subcaudatus*), seeds 0.7-2.5 mm long; [subgenus *Juncus*, section *Ozophyllum*] **Key C**
 - 3 Mature seeds without appendages, < 0.7 mm long.
 - 4 Flowers solitary (rarely up to 3) along branches of inflorescence; flowers often aborted; inflorescence diffuse, with slender flexuous branches; [subgenus *Juncus*, section *Ozophyllum*] **Key D**
 - 4 Flowers in heads (glomerules) of 3 or more; flowers seldom aborted; inflorescence various.
 - 5 Heads spherical or nearly so, usually 15-60 flowered **Key E**
 - 5 Heads turbinate to hemispherical, 3-15 flowered; [subgenus *Juncus*, section *Ozophyllum*] **Key F**

KEY A

- 1 Flowers borne in heads (glomerules) of 2-6; leaves spine-tipped; single bracteole subtending glomerule present at base of pedicel; [subgenus *Juncus*, section *Juncus*] ***J. roemerianus***
- 1 Flowers borne singly on branches of inflorescence; leaves not spine-tipped; each flower subtended by two bracteoles in addition to bracteole at base of pedicel.
 - 2 At least a few sheaths at base of plant with well developed blades; inflorescence bract channeled on one side; [subgenus *Agathryon*, section *Steirochloa*] ***J. coriaceus***
 - 2 Sheaths at base of plant bladeless; bract not channeled; [subgenus *Agathryon*, section *Juncotypus*].
 - 3 Culms well spaced along creeping rhizomes.
 - 4 Anthers shorter than filaments.
 - 5 Rhizomes 1.5-2 mm diameter; culms 1 mm diameter; inflorescence 3-12 flowered; [boreal, south to ne. WV] [***J. filiformis***]
 - 5 Rhizomes 2-4 mm diameter; culms 1.5-2.5 mm diameter; inflorescence 8-30+ flowered; [rare montane plant in NC and SC] ***J. gymnocarpus***
 - 4 Anthers longer than filaments ***J. balticus* var. *littoralis***
 - 3 Culms cespitose or tufted on short branching rhizomes.
 - 6 Perianth much shorter than capsule (about 1/2 as long); stamens 6; [rare montane plant in NC and SC] ***J. gymnocarpus***
 - 6 Perianth > 3/4 length of capsule; stamens 6 or 3.
 - 7 Capsules 3-4 mm long; stamens 6; [rare alien in piedmont and mountains of VA] ***J. inflexus***
 - 7 Capsules 1.5-3.2 mm long; stamens 3; [widespread native].
 - 8 Stems coarsely grooved, with 10-20 ridges just below inflorescence, firm; perianth 2.7-3.6 mm long, sepals slightly exceeding petals and capsule ***J. pylaei***
 - 8 Stems finely grooved, with 25-30 striations just below inflorescence, soft, easily compressed; perianth 1.9-2.8 mm long, sepals equaling petals ***J. effusus* ssp. *solutus***

KEY B

- 1 Flowers borne in heads (glomerules) of 2 or more, individual flowers not subtended by two bracteoles (in addition to the bracteole at the base of the pedicel); [subgenus *Juncus*, section *Graminifolii*].
 - 2 Perianth 6-10 mm long; plant aquatic, submersed and sterile or emersed/stranded and fertile; stems weak, creeping, mat-forming ***J. repens***
 - 2 Perianth < 6 mm long; plant of uplands or wetland margins, never submersed; stems erect, never creeping or mat-forming.
 - 3 Rhizomes 5-20 cm long, slender (1-1.5 mm wide), flexuous; inflorescence compact (usually < 5 cm long); heads 2-5 flowered ***J. longii***
 - 3 Rhizomes < 5 cm long (usually < 3 cm), thick (2-4 mm wide) or thin or absent (< 2 mm wide); inflorescence various; heads 2-15 flowered.
 - 4 Heads 2-5 flowered; rhizomes thick (2-4 mm); inflorescence elongate (usually 8-20 cm); seeds narrowly ellipsoid, coarsely ribbed, both ends tailed ***J. biflorus***
 - 4 Heads 5-15 flowered; rhizomes thin or absent (< 2 mm); inflorescence < 8 cm long; seeds plump, finely ribbed, both ends apiculate (but without tails).
 - 5 Perianth straw colored with green midstripe; capsules tan to reddish brown; heads 1-5 (-10) per culm; [calcareous glades inland, east to GA and TN] ***J. filipendulus***
 - 5 Perianth dark brown; capsules brown; heads > 10 per culm; [widespread] ***J. marginatus***
 - 1 Flowers borne singly on branches of inflorescence, individual flowers subtended by two bracteoles (in addition to the bracteole at the base of the pedicel).
 - 6 Plants annual, without coarse roots or persistent leaf bases; [subgenus *Agathryon*, section *Tenageia*] ***J. bufonius***
 - 6 Plants perennial, with coarse roots or persistent leaf bases.
 - 7 Leaves finely serrulate or scabrid; auricles deeply lacerate; [rare and local in high elevation "alpine" situations] ***J. trifidus***
 - 7 Leaves entire; auricles not lacerate; [subgenus *Agathryon*, section *Steirochloa*].

- 8 Auricles 3-6 mm long at summit of leaf sheath.
- 9 Capsules < 3/4 length of perianth, borne widely spaced along the usually diffuse branches of the inflorescence*J. anthelatus*
- 9 Capsules > 3/4 length of perianth, borne congested on branches with internodes about as long as perianth*J. tenuis*
- 8 Auricles < 2 mm long or absent.
- 10 Cauline leaves present in addition to basal leaves; blades flat*J. gerardii*
- 10 Cauline leaves absent.
- 11 Leaf blades terete or channeled*J. dichotomus*
- 11 Leaf blades flat.
- 12 Perianth obtuse apically; capsule chestnut brown or darker; [alien, ranging south to MD]*J. compressus*
- 12 Perianth acute to acuminate; capsule light brown or tan; [native].
- 13 Inflorescence bract shorter than inflorescence; capsules 3-locular.
- 14 Perianth usually 2.5-3.5 mm long; flowers secund; capsules globose to ellipsoid*J. secundus*
- 14 Perianth usually 4.0-5.5 mm long; flowers not secund; capsules ellipsoid or narrowly so; restricted to granite flatrocks .
.....*J. georgianus*
- 13 Inflorescence bract longer than inflorescence; capsules 1-locular to falsely 3-locular.
- 15 Auricles yellowish, glossy; perianth spreading in fruit*J. dudleyi*
- 15 Auricles whitish or straw colored, dull; perianth not spreading.
- 16 Mature capsules pale brown or darker; [of the Coastal Plain]*J. dichotomus*
- 16 Mature capsules pale tan or darker; [of prairies and plains, east to KY, se TN]*J. interior*

KEY C

- 1 Culms and leaves scabrid, gray-green or blue-green; seeds 2.0-2.5 mm long*J. caesariensis*
- 1 Culms and leaves smooth, green; seeds 0.7-2.2 mm long.
- 2 Seeds 1.2-2.2 mm long, seed body < 1/2 length of seed.
- 3 Mature capsules 3.0-4.0 mm long, < 1.5 mm longer than perianth, light reddish brown to light brown; heads 5-50 flowered
.....*J. canadensis*
- 3 Mature capsules 4.0-5.0 mm long, 2 mm longer than perianth, dark reddish purple; heads 3-7 flowered*J. trigonocarpus*
- 2 Seeds 0.7-1.2 mm long, seed body > 1/2 length of seed.
- 4 Perianth obtuse to subacute, with wide scarious margins*J. brachycephalus*
- 4 Perianth acuminate, with narrow scarious margins.
- 5 Inflorescence narrow, the branches erect; mature capsules dark brown; heads 2-7 flowered*J. brevicaudatus*
- 5 Inflorescence open, the branches widely spreading; mature capsules dark straw colored; heads 5-20 flowered*J. subcaudatus*

KEY D

- 1 Rhizomes 2-6 mm thick; perianth acute; culms erect, 3-8.5 dm tall; [southeastern, ranging north to Isle of Wight and City of Suffolk Counties, VA]*J. abortivus*
- 1 Rhizomes about 1 mm thick; perianth obtuse; culms ascending to erect, < 5 dm tall; [northeastern, ranging south to Accomack County, VA] ..
.....*J. pelocarpus*

KEY E

- 1 Leaves flattened, narrowly elliptic in cross-section.
- 2 Leaves with incomplete septae; heads about 10 mm diameter; tips of dehisced capsules united; [subgenus *Juncus*, section *Iridifolii*]
.....*J. polycephalus*
- 2 Leaves with complete septae; heads about 12 mm diameter; tips of dehisced capsules split; [subgenus *Juncus*, section *Ozophyllum*]
.....*J. validus* var. *validus*
- 1 Leaves terete, not at all flattened; [subgenus *Juncus*, section *Ozophyllum*].
- 3 Stamens 6.
- 4 Plants caespitose, lacking rhizomes*J. acuminatus*
- 4 Plants rhizomatous.
- 5 Heads 6-20 flowered, 6-9 mm diameter; auricles cartilaginous, 0.5-1.0 mm long*J. nodosus*
- 5 Heads 25-100 flowered, 10-14 mm diameter; auricles membranous, 2.5-4.0 mm long*J. torreyi*
- 3 Stamens 3.
- 6 Plants caespitose, lacking rhizomes; tepals lanceolate*J. acuminatus*
- 6 Plants rhizomatous; tepals lance-subulate.
- 7 Mature capsules included, < 1/2 length of perianth*J. brachycarpus*
- 7 Mature capsules exserted or slightly included.
- 8 Uppermost stem leaf and/or inflorescence bract > inflorescence; capsule valves separating at apex during dehiscence*J. nodosus*
- 8 Uppermost stem leaf and/or inflorescence bract < inflorescence; capsule valves remaining united.
- 9 Uppermost cauline leaf blade non-septate, much shorter than its sheath; Outer tepals significantly longer than the inner tepals ...
.....*J. megacephalus*
- 9 Uppermost cauline leaf blade septate, longer than its sheath; outer tepals and inner tepals of similar length.
- 10 Heads lobulate; mature capsule 2.0-3.0 mm long*J. scirpoides* var. *compositus*
- 10 Heads spherical, not lobulate; mature capsule 3.0-4.5 mm long*J. scirpoides* var. *scirpoides*

KEY F

- 1 Mature capsules 2 mm or more longer than perianth, 4.0-5.2 mm long *J. diffusissimus*
- 1 Mature capsules < 1.5 mm longer than perianth, or subequal.
- 2 Stamens 6.
- 3 Proximal culm leaf overtopping inflorescence; culms well spaced along creeping rhizomes; plants often exceed 8 dm tall; [northeastern, south to DE, MD, disjuncts in ne. NC] *J. militaris*
- 3 Proximal culm leaf shorter than inflorescence; plants caespitose; plants < 8 dm tall.
- 4 Mature capsules slightly shorter than to slightly longer than perianth (< 0.5 mm longer); perianth 2.6-3.9 mm long; inflorescence 4-16 cm long; [widespread] *J. acuminatus*
- 4 Mature capsules exceeding perianth by about 1 mm (> 0.5 mm longer); perianth 1.7-3.0 mm long; inflorescence 2-8 cm long; [northern, in our region montane] *J. articulatus*
- 2 Stamens 3.
- 5 Mature capsules about 1/3 longer than perianth (roughly 1-1.5 mm longer) *J. debilis*
- 5 Mature capsules equaling or barely exceeding perianth.
- 6 Heads 5-50; capsules 2.8-3.5 mm long *J. acuminatus*
- 6 Heads 30-250; capsules 1.9-2.9 mm long.
- 7 Capsules deep chestnut brown; roots with terminal tubers; inner tepals usually > 2.4 mm long; [plants southeastern] *J. elliotii*
- 7 Capsules straw colored; roots without terminal tubers; inner tepals usually 1.7-2.3 mm long; [plants midwestern, east to nw. FL and se. TN] *J. nodatus*

Juncus abortivus Chapman. Cp (GA, NC, SC, VA): ditches, along pond and stream margins, seepage slopes, disturbed open areas; uncommon. July-October. Se. VA to FL Panhandle. The septae along the narrow leaf blades of *J. abortivus* are often difficult to detect. [= RAB, F, GW, K, S; = *J. pelocarpus* E. Meyer var. *crassicaudex* Engelm. – C, G; < *J. pelocarpus* – FNA, Y]

Juncus acuminatus Michaux. Cp, Pd, Mt (GA, NC, SC, VA): throughout, in damp soils; common. June-August. ME and N.S. to Ont. and MN, south to n. FL, TX and n. Mexico; British Columbia to CA. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Juncus anhelatus (Wiegand) R.E. Brooks. Mt (NC, VA), Pd (NC): moist or wet sites; uncommon. July-September. New Brunswick and ME west to MN, south to GA and AR. [= FNA, Y; < *J. tenuis* Willdenow – RAB, G, GW, K, S, W; < *J. tenuis* var. *tenuis* – C; = *J. tenuis* var. *anhelatus* Wiegand – F]

Juncus articulatus Linnaeus, Jointleaf Rush. Mt (VA), Cp (NC): marshes, wet open ground; rare (NC Watch List). July-September. Nearly cosmopolitan; in North America from Newfoundland to AK, south to e. NC (Cape Hatteras, Dare County) and CA. [= RAB, C, FNA, G, K; > *J. articulatus* var. *articulatus* – F; > *J. articulatus* var. *obtusatus* Engelm. – F; = *J. articulatus* ssp. *articulatus* – Y]

Juncus balticus Willdenow var. *littoralis* Engelm. Mt (VA): open calcareous wetlands; rare. The species is circumboreal; var. *littoralis* is North American: Labrador west to British Columbia, south to NY (Long Island), NJ, PA, w. VA, OH, IN, MO, and KS. [= F, G, K; = *J. arcticus* Willdenow var. *littoralis* (Engelm.) Boivin – C; < *J. arcticus* Willdenow var. *balticus* (Willdenow) Trautvetter – FNA; = *J. balticus* ssp. *littoralis* (Engelm.) Snogerup – Y]

Juncus biflorus Elliott. Cp, Pd, Mt (GA, NC, SC, VA): pine savannas, pine flatwoods, mesic areas in sandhill-pocosin ecotones, roadsides, low fields in the Piedmont; common (uncommon in the Mountains). June-October. MA to MI and MO, south to TX and FL. The characters used to split this species from *J. longii* and *J. marginatus* (rhizome length and thickness, glomerule number, seed size and shape) are somewhat variable, and intermediates between these three taxa are frequent, particularly in se. United States. Due to this intergradation, *J. biflorus* and *J. longii* are sometimes treated as synonyms or varieties of *J. marginatus*, but Knapp (2004) supports their recognition. Since all three taxa in this group, fitting the typical species descriptions, are found in our area, they are here recognized at the species level. It is interesting to note that most of the plants in our area displaying typical taxonomic characters are found in natural, or undisturbed habitats; many of the confusing intermediates appear to occur in disturbed wetlands (roadside ditches, cleared areas). Further investigation of these disturbed-area populations is necessary. [= RAB, F, K, W; < *J. biflorus* – C, G (also see *J. longii*); < *J. marginatus* – FNA, GW, Y (also see *J. biflorus* and *J. longii*); = *J. aristulatus* Michaux var. *biflorus* (Elliott) Small – S]

Juncus brachycarpus Engelm. Short-fruited Rush. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (GA): wet, sandy soil; rare (NC Watch List). June-September. MA to IL, south to SC, w. GA, and TX. [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus brachycephalus (Engelm.) Buchenau. Mt (GA, VA), Pd, Cp (GA): calcareous wetlands. Nova Scotia west to ND, south to MA, OH, and IL; disjunct southward in VA, n. GA, TN, and CO. [= C, F, FNA, G, K, Y]

Juncus brevicaudatus (Engelm.) Fernald, Short-tailed Rush. Mt (NC, VA): bogs and seeps at high elevations; rare (NC Watch List). July-September. Newfoundland to Manitoba south to MN, PA, and in mountains south to NC. [= RAB, C, F, FNA, G, K, W, Y]

Juncus bufonius Linnaeus var. *bufonius*, Toad Rush. Cp, Pd (GA, NC, SC, VA), Mt (NC, VA): wet, open ground, roadsides, dried pools, drawdown shores; common (rare in upper Piedmont, Sandhills, and Mountains). June-November. Cosmopolitan. [= C, F, G, K; < *J. bufonius* – RAB, FNA, GW, S, W, Y]

Juncus caesariensis Coville, New Jersey Rush. Cp (VA), Mt (NC): sphagnum seepages in the Coastal Plain of VA, seeps and bogs at low to moderate elevations in the Mountains of NC; rare (US Species of Concern, NC Rare). July-October. Found in 1992 from a seepage bog in Clay County, NC, and in 1993 from a bog in Henderson County, NC, where associated with northern disjuncts. Rare throughout its range, it is known only from several sites in NJ, MD, VA, NC, and Nova Scotia (Newell & Newell 1994). The scabrid leaf blades and large seeds quickly separate this species from the other long-tailed rushes. It should be looked for along seepage slopes and bogs in the fall-line sandhills and the outer Coastal Plain. [= C, F, FNA, G, K, Y]

Juncus canadensis J. Gay ex Laharpe, Canadian Rush. Cp (GA, NC, SC, VA), Pd, Mt (NC, VA): lake, pond and stream margins, swamps, bogs, seepage slopes, wet meadows, ditches; common (rare in Piedmont and Mountains). July-October. Newfoundland to MN, south to c. peninsular FL, TN, and LA. *J. canadensis* is here treated as a single, polymorphic species. Fernald and others have described up to 5 forms and varieties of *J. canadensis*, based on variation in flower and capsule size

(from 2.5 mm to nearly 4.0 mm), shape of the glomerules (densely flowered and subglobose to few-flowered and turbinate), and structure and size of the inflorescence (congested to open). Further study is necessary to determine whether any of these taxa should be recognized. [= RAB, C, FNA, G, GW, K, S, W, Y; > *J. canadensis* var. *canadensis* – F; > *J. canadensis* var. *euroauster* Fernald – F]

Juncus coriaceus Mackenzie. Cp, Pd, Mt (GA, NC, SC, VA): stream and pond margins, swamps, flatwoods depressions, roadside ditches; common (rare in Mountains). June-September. S. NJ to n. FL, west to e. TX, north in the interior KY, AR, and OK. [= RAB, C, F, FNA, G, GW, K, W, Y; = *J. setaceus* Rostkovius – S, misapplied]

Juncus debilis A. Gray, Weak Rush. Cp, Pd, Mt (GA, NC, SC, VA): marshy shores, stream and pond margins, along puddles in wet, disturbed clearings, ditches; common (uncommon in Piedmont). May-August. RI to MO, south to n. FL and e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Juncus dichotomus Elliott. Cp, Pd, Mt (GA, NC, SC, VA): often in disturbed, open, wet areas, ditches, wet meadows; common (rare in western Piedmont and Mountains). June-October. MA to c. peninsular FL, west to OK and TX. The character used to separate *J. platyphyllus* (Wiegand) Fernald from *J. dichotomus* (flat leaf blade vs. terete leaf blade) does not appear to be reliable; leaf blades from culms in the same clump may vary from flat to slightly involute to completely terete. [= FNA, GW, W, Y; > *J. dichotomus* – RAB, F; > *J. platyphyllus* (Wiegand) Fernald – RAB, F; = *J. tenuis* var. *dichotomus* (Elliott) A. Wood – C; > *J. dichotomus* var. *dichotomus* – G, K, S; > *J. dichotomus* var. *platyphyllus* Wiegand – G, K, S]

Juncus diffusissimus Buckley, Diffuse Rush, Slim-pod Rush. Cp, Pd, Mt (GA, NC, SC, VA): low, wet open areas, ditches, margins of ponds and streams; uncommon (rare in Piedmont). May-September. Mostly Coastal Plain from se. VA to n. FL, west to e. and nc. TX; also s. IN to MO, KA, OK, TN, and KY. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Juncus dudleyi Wiegand, Dudley's Rush. Mt (NC, VA), Pd (VA), Cp (SC, VA): calcareous seepages and fens, river-scours; rare. Labrador to Nunavut, south at least to FL, TX, and CA. First reported for South Carolina by Hill & Horn (1997) and for NC by Tom Govus (pers. comm., 2005). [= F, FNA, K, S, W, Y; = *J. tenuis* Willdenow var. *dudleyi* (Wiegand) F.J. Hermann – C; < *J. tenuis* – G, GW]

Juncus effusus Linnaeus ssp. *solutus* (Fernald & Wiegand) Hämet-Ahti, Common Rush, Soft Rush. Cp, Pd, Mt (GA, NC, SC, VA): moist soil, marshes, margin of streams, ponds, lakes and swamps, low meadows; common. June-September. Newfoundland to MN, south to FL and Mexico. Ssp. *effusus* is European, and also occurs (allegedly introduced) in the ne. United States. [= Y, Z; < *J. effusus* – RAB, FNA, GW, S, W (also see *J. pylaei*); = *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – C; > *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – F, K; > *J. griseomii* Fernald – F, G; > < *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – G (also see *J. pylaei*); > *J. effusus* var. *compactus* – G, misapplied; > *Juncus effusus* Linnaeus var. *conglomeratus* (Linnaeus) Engelman – K]

Juncus elliotii Chapman, Elliott's Rush. Cp (GA, NC, SC, VA), Pd (GA, NC): margins of ponds and lakes, depressions in savannas and flatwoods, wet, disturbed clearings, roadside ditches; uncommon (rare in Piedmont). May-September. Coastal Plain, DE to cen. penin. FL, west to se. TX. Capsules of *J. elliotii* are similar in shape to *J. acuminatus*, but the presence of tubiferous roots, shorter perianth (2.0-2.5 mm long vs. 2.5-3.5 mm) and fewer-flowered glomerules (3-8 flowered vs. 5-many flowered) clearly distinguishes *J. elliotii* from *J. acuminatus*. [= RAB, C, F, FNA, G, GW, S, Y; < *J. elliotii* var. *elliotii* – K]

Juncus filipendulus Buckley, Texas Plains Rush. Mt (GA): prairies, limestone barrens; rare (GA Special Concern). KY, TN, and AL west to OK and TX. [= FNA, GW, K, S, Y]

Juncus georgianus Coville. Pd (GA, NC, SC): shallow depressions in granitic outcrops; rare (NC Watch List). June-August. An endemic of the Southeastern Piedmont, restricted to granitic flatrocks of NC, SC, GA, and ec. AL. [= RAB, FNA, K, S, W, Y]

Juncus gerardii Loiseleur, Blackfoot Rush, Blackgrass. Cp, Mt (VA): {habitat}; rare. [= C, FNA, W; > *J. gerardii* var. *gerardi* – F; = *J. gerardii* – G, orthographic variant; > *J. gerardii* var. *gerardii* – K; > *J. gerardii* ssp. *gerardii* – Y]

Juncus gymnocarpus Coville, Seep Rush. Mt (GA, NC, SC): bogs, seeps, streambanks; rare. July-September. Local, mountains of e. PA, w. NC, e. TN, nw. SC and ne. GA, Coastal Plain of se. AL, s. MS (Sorrie & Leonard 1999), and n. cen. Panhandle FL. In our area, *J. gymnocarpus* is scattered in mountain bogs and seeps throughout the mountain region; it reaches its most general occurrence in the escarpment gorge region of Transylvania, Macon, and Jackson counties, NC, where it also occurs along streambanks, especially in the vicinity of waterfalls. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

* ***Juncus inflexus*** Linnaeus. Mt (VA): wet meadows, disturbed wet or moist ground; rare, native of Eurasia. Introduced in VA (Virginia Botanical Associates 2006, Kartesz 1999). [= C, F, FNA, G, K, Y]

Juncus longii Fernald. Cp (GA, NC, VA), Pd (GA, NC, SC), Mt? (NC): usually in very wet, often inundated sites, bogs, ditches, rooting in clay or peat; uncommon (NC Watch List). June-August. MD south through VA, NC, SC to MS (Knapp 2004); more extensive distributions are based on misattribution. [= RAB, F, K; < *J. biflorus* – C, G; < *J. marginatus* – FNA, GW, Y (also see *J. biflorus* and *J. longii*); = *J. aristulatus* Michaux var. *aristulatus* – S]

Juncus marginatus Rostkovius. Cp, Pd, Mt (GA, NC, SC, VA): wet meadows, bogs, generally throughout in wet, sandy or peaty soil; common. June-September. Nova Scotia to Ontario, south to FL and TX. [= RAB, C, G, K, S, W; > *J. marginatus* var. *marginatus* – F; > *J. marginatus* var. *setosus* Coville – F; < *J. marginatus* – FNA, GW, Y (also see *J. biflorus* and *J. longii*); > *J. marginatus* – G; *J. setosus* (Coville) Small – G]

Juncus megacephalus M.A. Curtis, Large-headed Rush. Cp (GA, NC, SC, VA): brackish and freshwater marshes, bogs, ditches, wet, open places; uncommon. June-August. Coastal Plain, VA to s. FL, west to se. TX; e. MD (Sorrie, pers. comm.). [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus militaris Bigelow, Bayonet Rush. Cp (NC): lakeshores; rare. Nova Scotia to MD, DE, and ne. PA; inland near the Great Lakes; disjunct at Phelps Lake, NC (Sorrie, pers. comm., 2005). [= C, F, FNA, G, K, Y]

Juncus nodosus Linnaeus. Mt (VA): {habitat}; rare. Newfoundland to British Columbia, south to w. VA, WV, IN, MO, TX, and CA. [= C, F, FNA, G, Y; > *J. nodosus* var. *nodosus* – K] {add to synonymy}

Juncus pelocarpus E. Meyer. Cp (VA): sea-level fens; rare. Labrador west to MN, south to DE, e. VA, n. IN. [= K; = *J. pelocarpus* var. *pelocarpus* – C, G; > *J. pelocarpus* var. *pelocarpus* – F; < *J. pelocarpus* – FNA, Y (also see *J. abortivus*)]

Juncus polycephalus Michaux, Many-headed Rush. Cp (GA, NC, SC): sandy pond margins, ditches, savannas; uncommon. July-September. Coastal plain, NC to s. FL, west to e. TX; TN. [= RAB, F, FNA, GW, K, S, Y]

Juncus pylaei Laharpe, Common Rush. Cp, Pd, Mt? {NC, SC, VA}: moist soil, marshes, margin of streams, ponds, lakes and swamps, low meadows; common {additional checking of herbarium collections needed to determine actual range of this variety in our area; var. *solutus* as well}. June-September. Throughout eastern North America, south to NC. [= C, K, Y, Z; < *J. effusus* – RAB, FNA, GW, S, W; > *J. effusus* var. *costulatus* St. John – F; > *J. effusus* Linnaeus var. *pylaei* (Laharpe) Fernald & Wiegand – F; < *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – G]

Juncus repens Michaux, Creeping Rush. Cp (GA, NC, SC, VA), Pd, Mt (GA): streams, ponds, lakes, ditches, wet depressions in flatwoods, cypress savannas; common (rare in Piedmont and Mountains). June-October. DE to s. FL, west to TX, north into OK and TN. This species commonly forms dense mats – a useful field character. [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus roemerianus Scheele, Black Needle Rush. Cp (GA, NC, SC, VA): coastal tidal marshes, forming dense stands at and above mean high tide, above the *Spartina alterniflora* zone; common. January-June; May-October. MD to s. FL, west to se. TX. See Eleuterius (1977) for additional information on this species. [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus scirpoides Lamarck var. *compositus* R.M. Harper. Cp (GA, NC, SC, VA): roadsides, wet, open, disturbed areas, ?; uncommon. June-October. Coastal Plain: NC, GA, FL, AL, MS, LA, SC, TX, VA. [= S; < *J. scirpoides* – RAB, FNA, GW, K, Y; > < *J. scirpoides* -- K; < ? *J. scirpoides* var. *meridionalis* Buchenau – F, application uncertain; > *J. glomeratus* Batson – K, nomen nudum]

Juncus scirpoides Lamarck var. *scirpoides*. Cp, Pd, Mt (GA, NC, SC, VA): wet, open, disturbed areas, ditches, sandhill pocosin ecotones and seepage bogs, savannas and wet pine flatwoods, wet meadows; common (rare in Mountains). June-October. S. NY to s. FL, mostly Coastal Plain and Piedmont; west to TX; IN to MI, MO, OK. [= F, S; < *J. scirpoides* – RAB, C, FNA, G, GW, K, W, Y]

Juncus secundus Beauvois ex Poir. Pd, Mt (GA, NC, SC, VA), Cp (VA): dry fields, rock outcrops; rare (NC Watch List). June-September. ME to IN, south to e. OK, n. AL, and n. GA. [= RAB, C, F, FNA, G, K, S, W, Y]

Juncus subcaudatus (Engelmann) Coville & Blake, Somewhat-tailed Rush. Mt (GA, NC, SC, VA), Pd, Cp (VA): bogs, mossy woods and other wet places; common. July-October. Nova Scotia to NY, southwest to MO and southeast to GA. *J. subcaudatus* is one of the more difficult rushes to identify. Although it is grouped with *J. canadensis*, *J. brevicaudatus* and the other long-tailed rushes, its seeds lack distinct, long appendages. In general appearance it matches *J. acuminatus* quite well; mature seed size and mature capsule size (*J. subcaudatus* capsules are generally well exerted above the perianth, while *J. acuminatus* capsules are equal to only slightly exerted above the capsule) need to be examined in order not to confuse the two taxa. [= RAB, C, FNA, G, W, Y; > *J. subcaudatus* var. *subcaudatus* – F, K]

Juncus tenuis Willdenow, Path Rush. Cp, Pd, Mt (GA, NC, SC, VA): dry or moist soil along roadsides and paths, fields; common (uncommon in se. Coastal Plain). June-September. Labrador west to AK, south to FL, TX, CA. *J. tenuis* as it is here treated includes *J. tenuis* var. *williamsii* Fernald, which has a more congested inflorescence with arched to recurved inflorescence branches. [= FNA, Y; < *J. tenuis* – RAB, G, GW, K, S, W; < *J. tenuis* var. *tenuis* – C; > *J. tenuis* var. *tenuis* – F; > *J. tenuis* var. *williamsii* Fernald – F]

Juncus torreyi Coville, Torrey's Rush. Mt (GA, VA), Pd (VA), {NC}. June-September. New Brunswick west to British Columbia, south to GA, TX, CA, and n. Mexico. [= FNA, C, F, G, GW, K, S, W, Y]

Juncus trifidus Linnaeus, Highland Rush. Mt (NC, VA): rock crevices at high elevations, on greenstone, mica schist, amphibolite, and hornblende gneiss; rare (NC Endangered). June-September. The species is circumboreal, occurring in arctic-alpine situations in n. Europe and n. North America where it ranges from Newfoundland to Québec, south to s. New England and NY; disjunct in VA (Stony Man, Page County) and NC (Craggy Pinnacle, Craggy Dome, and Craggy Gardens, Buncombe County; Eagle Cliff, Mitchell County; Three Top Mountain, Ashe County), and WV (North Fork Mountain, Pendleton County). As with many circumboreal species of polymorphic nature, there is disagreement over the recognition of infraspecific taxa. Var. *monanthos* (Jacquin) Bluff & Fingerhuth or ssp. *monanthos* (Jacquin) Ascherson & Graebner has often been applied to e. North American *J. trifidus*, but should apply (if considered valid at all) only to *J. trifidus* of limestone areas of Europe. Although Hämet-Ahti (1980) correctly showed that Appalachian *J. trifidus* (from acidic and mafic gneisses and schists) does not belong to *J. monanthos* (*J. trifidus* ssp. *monanthos*, *J. trifidus* var. *monanthos*), her treatment of Appalachian plants as ssp. *carolinianus* Hämet-Ahti has been controversial. This treatment follows Clemants (1990), who concludes that the primarily vegetative characters used to separate Appalachian plants from the European (blade lengths and relative positions) are too variable to warrant recognition of subspecies or varieties in the taxon. Further study is warranted. [= Y; < *J. trifidus* – FNA, S; > *J. trifidus* var. *monanthos* (Jacquin) Bluff & Fingerhuth – RAB, F, G, W, misapplied; > *J. trifidus* ssp. *carolinianus* Hämet-Ahti – C, K]

Juncus trigonocarpus Steudel. Cp (GA, NC, SC), Pd (GA, NC): seepage slopes, bogs, along stream margins, ditches; common, rare in Piedmont. July-October. Coastal plain, NC to FL Panhandle, west to e. TX. Young *J. trigonocarpus* and *J. canadensis* are often confused; once mature, however, the two can usually be separated by capsule color alone. Although *J. canadensis* capsules redden, they never approach the dark reddish-purple tone of *J. trigonocarpus*. Seed and capsule size are also distinct for the two taxa. [= RAB, FNA, GW, K, S, Y]

Juncus validus Coville var. *validus*, Vigorous Rush. Cp (GA, NC, SC, VA), Pd (GA, SC), Mt (GA): stream and pond margins, roadside ditches, wet, open, often disturbed ground; uncommon. July-September. NC to n. FL, west to TX, OK and MO. Var. *fasciatus* M.C. Johnston is endemic to TX. [= FNA, K, Y; < *J. validus* – RAB, C, F, G, GW, S, W]

* ***Juncus acutus*** Linnaeus ssp. *leopoldii* (Parlatore) Snogerup. Cp (GA): {habitat unknown}; rare. Reported for se. GA by Jones & Coile (1988) and Kartesz (1999), but not by FNA. {investigate} [= FNA, K, Y] {not keyed, pending verification}

Juncus brachyphyllus Wiegand. Wet sandy areas. MO and KS, south to TX; MT, ID, and WA south to CA; disjunct in the Coastal Plain of w. TN. [= FNA, C, K, Y]

Juncus compressus Jacquin. Disturbed ground, ditches, in saline or alkaline soils. Nova Scotia to Ontario, south to MD, PA, w. NY, MI, WS, and sporadically distributed westward in high elevations. [= FNA, C, F, G, K] {add to synonymy; not yet keyed}

Juncus filiformis Linnaeus, Thread Rush. Bogs, wet acid areas. Circumboreal, south in North America to e. PA, w. PA, WV, n. MI, and n. MN. [= C, F, FNA, G, K]

Juncus interior Wiegand. Prairies, disturbed sites. OH west to Saskatchewan, south to e. TN, AL, LA, TX, and NM. Also reported for VA and NC (Kartesz 1999); the NC report is based on a misidentified specimen. {investigate} [= FNA, G, S, W, Y; > *J. interior* var. *interior* – K; < *J. tenuis* Willdenow var. *tenuis* – C; < *J. tenuis* – GW]

Juncus nodatus Coville. Shallow water, marshes, sloughs, savannas, bogs. KY west to KS, south to TN, AL, FL, LA, and TX. [= FNA, C, G, GW, K, Y; ? *J. robustus*, preoccupied] {synonymy incomplete}

***Luzula* A.P. de Candolle 1805 (Wood-rush)**

A genus of about 75-115 species, cosmopolitan. References: Coffey Swab in FNA (2000); Kirschner et al. (2002a)=Z; Balslev in Kubitzki (1998b). Key adapted in part from Coffey Swab in FNA (2000), C, and F.

- 1 Flowers borne singly or in small clusters of (1-) 2-4 (-8); inflorescences branched, unbranched, or dichasial.
- 2 Flowers borne in small clusters of (1-) 2-4 (-8); perianth white to pink; inflorescences dichasial; seeds lacking an appendage (or with a inconspicuous appendage); [alien species, naturalized north of our area]; [subgenus *Luzula*, section *Anthelaea*].....[*L. luzuloides* ssp. *luzuloides*]
- 2 Flowers borne singly; perianth tan to brown (the margins of the segments often translucent); inflorescences erect or lax, branching or not; seeds with a conspicuous appendage; [native species, widespread in our area]; [subgenus *Pterodes*].
- 3 Inflorescences simple, with an occasional pedicel branching from the base of a flower; apical appendages of seeds 0.6-1.5 (-2.1) mm long; seed/appendage length ratio 0.8-1.7*L. acuminata* var. *acuminata*
- 3 Inflorescences usually branching, the pedicels commonly paired; apical appendages of seeds 0.4-1.1 mm long; seed/appendage length ratio 1.0-2.8*L. acuminata* var. *carolinae*
- 1 Flowers borne in dense glomerate clusters (glomerules); inflorescences spikelike or umbellate; [subgenus *Luzula*, section *Luzula*].
- 4 Inflorescence branches divergent, at least some widely spreading; glomerules capitate to broadly ovoid, not cylindrical *L. echinata*
- 4 Inflorescence branches erect, none widely spreading; glomerules often cylindrical (less commonly merely capitate).
- 6 Seeds 0.9-1.3 mm long; caruncle 0.5-0.7 mm long; plants producing several basal bulblets (white swollen leaf bases)*L. bulbosa*
- 6 Seeds 1.1-1.7 mm long; caruncle 0.2-0.5 mm long; plants not producing basal bulblets.....*L. multiflora* var. *multiflora*

Luzula acuminata Rafinesque var. *acuminata*. Mt, Pd (NC, SC, VA): moist forests; common. April-August. Newfoundland west to Manitoba, south to SC and AR. [= RAB, C, F, FNA, G, GW, K; = *Juncooides saltuense* (Fernald) Small – S; < *L. acuminata* – W; = *L. acuminata* ssp. *acuminata* – Z]

Luzula acuminata Rafinesque var. *carolinae* (S. Watson) Fernald. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; common. April-August. MA, NY, PA, and se. OH south to n. FL and AR. Perhaps better treated at the species level. [= RAB, C, F, FNA, G, GW, K; = *Juncooides carolinae* (S. Watson) Kuntze – S; < *L. acuminata* – W; = *L. acuminata* ssp. *carolinae* (S. Watson) Z. Kaplan – Z]

Luzula bulbosa (Wood) Smyth & Smyth. Pd, Mt (GA, NC, SC, VA), Cp (NC, VA): dry forests and fields; common. March-August. MA, PA, IN, and NE south to n. FL, LA, and c. TX. [= RAB, C, F, FNA, GW, K, Z; = *L. campestris* (Linnaeus) A.P. de Candolle var. *bulbosa* Wood – G; = *Juncooides bulbosum* – S; < *L. multiflora* – W]

Luzula echinata (Small) F.J. Hermann. Mt, Pd, Cp (GA, NC, SC, VA): forests, bogs; common. Se. MA, se. NY PA, WV, and IA south to GA, AL, MS, and e. TX. March-August. [= RAB, C, FNA, GW, K, Z; > *L. echinata* var. *echinata* – F; > *L. echinata* var. *mesochorea* F.J. Hermann – F; = *L. campestris* (Linnaeus) A.P. de Candolle var. *echinata* (Small) Fernald & Wiegand – G; = *Juncooides echinatum* Small – S; < *L. multiflora* – W]

Luzula multiflora (Ehrhart) Lejeune var. *multiflora*. Mt, Pd, Cp (VA), {NC?, SC?}: forests; common. March-August. Newfoundland and Ontario, south to VA, KY, and MO. [= F; < *L. multiflora* – RAB, C; = *L. campestris* (Linnaeus) A.P. de Candolle var. *multiflora* (Ehrhart) Celak – G; = *L. multiflora* ssp. *multiflora* var. *multiflora* – K; = *L. multiflora* ssp. *multiflora* – FNA, Z; < *L. multiflora* – W]

* *Luzula luzuloides* (Lamarck) Dandy & Wilmott ssp. *luzuloides*, is a native of Europe, naturalized in ne. North America as far south as se. PA (Rhoads & Klein 1993). It may occur in our area. [= FNA, Z; < *L. luzuloides* – C, F, K]

JUNCAGINACEAE L.C. Richard 1808 (Arrowgrass Family)

A family of 3-4 genera and 20 species, of temperate and boreal regions of the Old and New World. References: Haynes & Hellquist in FNA (2000); Thieret (1988); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

***Triglochin* Linnaeus 1753 (Arrowgrass)**

A genus of about 12 species, cosmopolitan. References: Haynes & Hellquist in FNA (2000); Thieret (1988)=Z; Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

- 1 Pistils 6, all fertile; fruits 2-4.5 mm long; central axis between the carpels not winged.....[*T. maritima*]
- 1 Pistils 6, 3 fertile and 3 sterile; fruits either 7-8.3 mm or 1-2 mm long; central axis between broadly winged.
- 2 Fruits elongate, 7-8.3 mm long; tepals 6; [of PA northward].....[*T. palustris*]

- 2 Fruits globose, 1-2 mm long; tepals 3; [of DE and MD southward]..... *T. striata*

Triglochin striata Ruiz & Pavón, Southern Arrowgrass. Cp (GA, NC, SC, VA): brackish to nearly freshwater marshes; uncommon (VA Watch List). May-October. The species has an extensive range, occurring in tropical Central and South America, Africa, and Australia; in North America, it ranges from MD and DE south to FL and west to LA, and also on the west coast in CA and OR. [= F, FNA, G, K; = *T. striatum* – RAB, C, GW, S, Z, orthographic variant]

Triglochin maritima Linnaeus. Brackish coastal habitats and inland bogs. Circumboreal, south in North America to MD, DE, OH, NE, NM, Mexico; also Patagonia. [= F, FNA, G, K; = *T. maritimum* – C, Z, orthographic variant]

Triglochin palustris Linnaeus. Brackish coastal habitats and inland bogs. Circumboreal, south in North America to PA, IN, IA, NE, and NM. [= F, FNA, G, K; = *T. palustre* – C, Z, orthographic variant]

LILIACEAE A.L. de Jussieu 1789 (Lily Family)

As here interpreted narrowly, the Liliaceae constitutes about 11 genera and 550 species, of the Northern Hemisphere. There has been much recent investigation and re-interpretation of evidence regarding the upper-level taxonomy of the Liliales, with strong suggestions that the broad Liliaceae recognized by Cronquist (1981) is artificial and polyphyletic. Cronquist (1993) himself concurs, at least to a degree: "we still await a comprehensive reorganization of the lilies into several families more comparable to other recognized families of angiosperms." Dahlgren & Clifford (1982) and Dahlgren, Clifford, & Yeo (1985) synthesized an early phase in the modern revolution of monocot taxonomy. Since then, additional research, especially molecular (Duvall et al. 1993, Chase et al. 1993, Bogler & Simpson 1995, and many others), has strongly validated the general lines (and many details) of Dahlgren's arrangement. The most recent synthesis (Kubitzki 1998a) is followed as the basis for familial and generic taxonomy of the lilies and their relatives (see summary below). References: Angiosperm Phylogeny Group (1998, 2003); Tamura in Kubitzki (1998a). [also see AGAVACEAE, ALLIACEAE, ALSTROEMERACEAE, AMARYLLIDACEAE, ASPARAGACEAE, COLCHICACEAE, HEMEROCALLIDACEAE, HOSTACEAE, HYACINTHACEAE, HYPOXIDACEAE, MELANTHIACEAE, NARTHECIACEAE, RUSCACEAE, SMILACACEAE, THEMIDACEAE, TOFIELDIACEAE, TRILLIACEAE]

Our "liliaceous" genera (members of orders placed in the Liliales) are therefore divided as shown below, largely following Kubitzki (1998a) and some more recent molecular analyses.

ALISMATALES

TOFIELDIACEAE: *Harperocallis*, *Pleea*, *Tofieldia*, *Triantha*.

LILIALES

ALSTROEMERACEAE: *Alstroemeria*.

COLCHICACEAE: *Colchicum*, *Uvularia*.

LILIACEAE: *Clintonia*, *Erythronium*, *Lilium*, *Medeola*, *Prosartes*, *Streptopus*, *Tricyrtis*, *Tulipa*.

MELANTHIACEAE: *Arianthium*, *Anticlea*, *Chamaelirium*, *Helonias*, *Schoenocaulon*, *Stenanthium*, *Veratrum*, *Toxicoscordion*, *Xerophyllum*, *Zigadenus*.

SMILACACEAE: *Smilax*.

TRILLIACEAE: *Trillium*. (or to be included in MELANTHIACEAE)

ASPARAGALES

AGAVACEAE: *Camassia*, *Manfreda*, *Schoenolirion*, *Yucca*. (or to be included in ASPARAGACEAE)

ALLIACEAE: *Allium*, *Ipheion*, *Nothoscordum*.

AMARYLLIDACEAE: *Crinum*, *Galanthus*, *Hymenocallis*, *Leucojum*, *Lycoris*, *Narcissus*, *Sternbergia*, *Zephyranthes*. (or to be included in ALLIACEAE)

ASPARAGACEAE: *Asparagus*.

HEMEROCALLIDACEAE: *Hemerocallis*. (or to be included in XANTHORRHOACEAE)

HOSTACEAE: *Hosta*. (or to be included in ASPARAGACEAE)

HYACINTHACEAE: *Hyacinthoides*, *Hyacinthus*, *Muscari*, *Ornithogalum*. (or to be included in ASPARAGACEAE)

HYPOXIDACEAE: *Hypoxis*.

IRIDACEAE: *Alophia*, *Calydorea*, *Crocus*, *Crococsmia*, *Gladiolus*, *Herbertia*, *Iris*, *Nemastylis*, *Sisyrinchium*.

ORCHIDACEAE: *Aplectrum*, *Arethusa*, *Bletilla*, *Calopogon*, *Cleistis*, *Coeloglossum*, *Corallorhiza*, *Cypripedium*, *Epidendrum*, *Epipactis*, *Galearis*, *Goodyera*, *Habenaria*, *Hexalectris*, *Isotria*, *Liparis*, *Listera*, *Malaxis*, *Platanthera*, *Pogonia*, *Ponthieva*, *platythelys*, *Pteroglossaspis*, *Sacoila*, *Spiranthes*, *Tipularia*, *Triphora*, *Zeuxine*.

RUSCACEAE: *Convallaria*, *Liriope*, *Maianthemum*, *Nolina*, *Polygonatum*. (or to be included in ASPARAGACEAE)

THEMIDACEAE: *Dichelostemma*. (or to be included in ASPARAGACEAE)

DIOSCOREALES

BURMANNIACEAE: *Apteria*, *Burmannia*.

DIOSCOREACEAE: *Dioscorea*.

NARTHECIACEAE: *Alettris*, *Lophiola*, *Narthecium*.

PANDANALES

STEMONACEAE: *Croomia*.

- 1 Leaves basal; flowers on a leafless scape; tepals yellow or white.
 - 2 Flowers in an umbel at the summit of a leafless scape; fruit a berry; [subfamily *Medeoloideae*] *Clintonia*
 - 2 Flowers solitary and scapose; tepals yellow or white; fruit a capsule; [subfamily *Lilioideae*, tribe *Tulipeae*] *Erythronium*
- 1 Leaves on a stem; flowers not scapose; tepals orange, red, rose, yellow, or white.
 - 3 Leaves whorled at least 1 node.

- 4 Leaves occurring at several nodes, these variously whorled and/or alternate; flowers orange, red, or yellow; [subfamily *Lilioideae*, tribe *Lilieae*]..... *Lilium*
- 4 Leaves occurring in a single whorl, with fertile plants with a second whorl of leaflike bracts subtending the flowers; flowers yellow; [subfamily *Medeoloideae*] *Medeola*
- 3 Leaves alternate at all nodes.
 - 5 Leafy stem branched; fruit a berry.
 - 6 Stems brownish, wiry; inflorescence terminal *Prosartes*
 - 6 Stems green, rather succulent; inflorescence axillary *Streptopus*
 - 5 Leafy stem unbranched; fruit a capsule.
 - 7 Leaves at 1-6 nodes; flowers cup-shaped, the tepals incurved-erect; [subfamily *Lilioideae*, tribe *Tulipeae*] [*Tulipa*]
 - 7 Leaves at 7 or more nodes; flowers with tepals recurved.
 - 8 Flowers orange, red, or yellow (rarely white); leaves unspotted *Lilium*
 - 8 Flowers whitish or lavender with darker spots; leaves often dark-spotted [*Tricyrtis*]

Clintonia Rafinesque 1819

A genus of 5 species, of temperate to subarctic e. Asia and North America. References: Utech in FNA (2002a); Tamura in Kubitzki (1998a).

- 1 Flowers yellow; berry blue (rarely to whitish-blue); leaf margins glabrous or slightly ciliate; [mostly of high elevations] *C. borealis*
- 1 Flowers white (often marked with purple); berry black; leaf margins copiously retrorsely ciliate, the cilia 2-4 mm long; [plants of middle elevations] *C. umbellulata*

Clintonia borealis (Aiton) Rafinesque, Bluebead-lily. Mt (GA, NC, VA): spruce-fir forests, northern hardwood forests, less commonly in red oak forests; common (GA Special Concern). Late May-June; July-September. Labrador west to Manitoba, south to NJ, PA, and n. IN, and in the mountains to w. NC, e. TN, and n. GA (Jones & Coile 1988). [= RAB, C, F, FNA, G, K, S, W]

Clintonia umbellulata (Michaux) Morong, Speckled Wood-lily. Mt (GA, NC, SC, VA): red oak and other oak forests, mesic to dry ridges and slopes, less commonly in northern hardwood forests, generally at lower elevations than *C. borealis*, though the two species can co-occur; common. Mid May-June; August-October. An Appalachian endemic: c. NY west to s. OH, south to n. GA (Jones & Coile 1988). *Clintonia alleghaniensis* Harned, differing from *C. umbellulata* in its ultramarine blue berry (vs. black) is known from a number of sites in VA, MD, and WV. It has been variously interpreted as a species, a hybrid of *C. borealis* and *C. umbellulata*, or merely an odd form of *C. umbellulata*; it needs further study. [= RAB, C, F, FNA, G, K, W; = *Xeniatrum umbellulatum* (Michaux) Small – S; > *C. alleghaniensis* Harned]

Erythronium Linnaeus 1753 (Trout Lily)

A genus of about 25 species, north temperate and subarctic, of North America and Eurasia (especially diverse in w. North America). References: Parks & Hardin (1963)=Z; Mathew (1992)=Y; Allen & Robertson in FNA (2002a); Tamura in Kubitzki (1998a).

Identification notes: Stolons are white shoots produced from the bulb. Most run horizontally, either underground or along the ground surface but beneath leaf litter. Flowering individuals often produce no stolons. The stolon characters in the key below are those of non-flowering individuals and refer to horizontal stolons only.

- 1 Perianth white *E. albidum*
- 1 Perianth yellow.
 - 2 Petals lacking auricles at base; capsule and ovary distinctly indented (umbilicate) at apex (or rarely truncate in *E. umbilicatum* ssp. *monostolum*, or the ovary when young not yet displaying the apical indentation); mature capsules usually reclining on ground, with the apex downward; stolons 0-1 per bulb; anthers usually lavender, brown, cinnamon, or purple (sometimes yellow).
 - 3 Horizontal stolons 1 per bulb; flecking on perianth segments slight to strong; perianth margins slightly irregular (though not auricled); stigma lobes long; pale spot on adaxial side of perianth segments always present, small to large, usually pale yellow; [at high elevations in the Southern Appalachians] *E. umbilicatum* ssp. *monostolum*
 - 3 Horizontal stolons 0 per bulb; flecking on perianth segments absent to slight; perianth margins entire, smooth; stigma lobes short; pale spot on adaxial side of perianth segments usually present, small to medium, usually white; [of lower to mid elevations, widespread in our area] *E. umbilicatum* ssp. *umbilicatum*
 - 2 Petals with auricles at base; capsule and ovary truncate, rounded, apiculate, or beaked at apex; mature capsules usually held well off ground, the apex oriented horizontally or ascending; stolons usually (1-) 2-5 per bulb; anthers usually yellow (rarely brown or lavender).
 - 4 Capsule distinctly beaked at the apex; petals with well-developed auricles at the base, these encircling a filament [*E. rostratum*]
 - 4 Capsule truncate, rounded, or apiculate at the apex; petals with small auricles at the base, which do not encircle a filament.
 - 5 Capsule apiculus absent or poorly developed *E. americanum* ssp. *americanum*
 - 5 Capsule apiculus well developed *E. americanum* ssp. *harperi*

Erythronium albidum Nuttall, White Trout Lily, Blonde Lilian. Mt (GA, VA), Pd (VA): rich, mesic forests, in very nutrient-rich alluvial soils; rare (VA Rare). March-April. S. Ontario west to MN, south to n. VA, nw. GA, KY, sc. TN, MO, and OK. [= C, K, S, W, Y; = *E. albidum* var. *albidum* – F, G]

Erythronium americanum Ker-Gawler ssp. *americanum*, American Trout Lily. Pd (NC, SC, VA), Mt, Cp (NC, VA): moist bottomland or slope forests, especially over mafic rocks; common in VA, much rarer in NC (NC Watch List). February-

April; April-May. New Brunswick west to Ontario and MN, south to sc. NC, c. TN, AR, and OK. It is much rarer than *E. umbilicatum* in NC. *E. americanum* is a tetraploid ($2n = 48$); Parks & Hardin suggest the possibility that it is an allotetraploid involving *E. rostratum* and *E. umbilicatum* as parents. *E. americanum* is larger-flowered, more graceful, and later-blooming (by 1-2 weeks) than *E. umbilicatum* ssp. *umbilicatum*, where they co-occur. [= FNA, GW, K, Y, Z; < *E. americanum* – RAB, F, G, S (also see *E. umbilicatum*); < *E. americanum* – C, W]

Erythronium americanum Ker-Gawler ssp. *harperi* (W. Wolf) Parks & Hardin, Harper's Trout Lily. Mt (GA): moist forests; rare. Ne. TN and nc. TN south to extreme se. TN, nw. GA, and nc. AL. [= FNA, GW, K, Y, Z; < *E. americanum* – S]

Erythronium umbilicatum Parks & Hardin ssp. *monostolum* Parks & Hardin, Southern Appalachian Trout Lily. Mt (NC): high elevation coves, slopes, and grassy balds; uncommon. March-May; April-June. Ssp. *monostolum* is endemic to the high mountains of NC and TN. It approaches the VA border and should be sought, especially in the Grayson Highlands area. *E. umbilicatum* ssp. *monostolum* is a diploid ($2n = 24$). [= FNA, GW, K, Y, Z; < *E. americanum* – RAB, F, G, S; < *E. umbilicatum* – C, W]

Erythronium umbilicatum Parks & Hardin ssp. *umbilicatum*, Dimpled Trout Lily. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist bottomland or slope forests, or in rather dry upland habitats; common (rare in FL). February-April (May?); April-June. VA and e. WV south through NC, SC, and e. TN to c. GA, e. AL, and Panhandle FL. *E. umbilicatum* ssp. *umbilicatum* is a diploid ($2n = 24$). Mathew (1992) suggests the possibility that an earlier name, *E. nuttallianum* Roemer & Schultes, may apply to this taxon; the two locations mentioned on the type, Pennsylvania and Albany, NY, are outside the known range of the species, however. [= FNA, GW, K, Y, Z; < *E. americanum* – RAB, F, G, S; < *E. umbilicatum* – C, W, WH]

Erythronium rostratum W. Wolf, Beaked Trout Lily. C. TN, MO, and se. KS, south to c. AL, wc. LA, and se. OK. [= FNA, GW, K, Y, Z; < *E. americanum* – S]

Lilium Linnaeus 1753 (Lily)

A genus of about 110 species, of temperate northern hemisphere (especially e. Asia). Many taxonomic problems remain in this genus of showy ornamentals. References: Adams & Dress (1982)=Z; Skinner & Sorrie (2002)=X; Wherry (1946)=Y; Skinner in FNA (2002a); Henry (1946); Tamura in Kubitzki (1998a).

- 1 Dark bulblets produced in many leaf axils; [exotic]..... *L. lancifolium*
- 1 Dark bulblets never produced; [native (except *L. philippinense*), though some species also cultivated].
- 2 Flowers white; leaves narrowly linear; [exotic]..... *L. philippinense*
- 2 Flowers orange or yellow; leaves lanceolate, oblanceolate, or obovate; [native].
- 3 Flowers erect, facing upwards; tepals clawed.
- 4 Leaves all alternate; [of the Coastal Plain]..... *L. catesbaei*
- 4 Leaves (at least some of them) whorled or verticillate; [of the Mountains]..... *L. philadelphicum* var. *philadelphicum*
- 3 Flowers nodding or declined, facing downwards or to the side; tepals narrowed to the base, but not clawed.
- 5 Leaves oblanceolate to obovate, alternate and whorled, in many plants 50% or more of nodes bearing a single leaf; flowers 1-4 (rarely more), nodding to pendant, fragrant *L. michauxii*
- 5 Leaves lanceolate or narrowly elliptic, not broader distally, alternate and whorled, in most plants 10-30% of nodes bearing a single leaf; flowers 1-30+, oriented variously, not fragrant.
- 6 Flowers at maturity campanulate (tepals with somewhat recurved tips); style and stamens included or barely exerted.
- 7 Flowers 3-4 cm in diameter; pistil 3-4 cm long; tepals 3-5.5 cm long, deep red, mucronate by extension of the midrib, reflexed < 45 degrees from the flower axis, the terminal third of the tepals generally gently incurved; anthers 4-6 mm long, completely included within the perianth when viewed from the side; [high elevations in the Blue Ridge of w. NC, ne. TN, and sw. VA] *L. grayi*
- 7 Flowers 4.5-9 cm in diameter; pistil 4-6 cm long; tepals 6-8 cm long, yellow, orange to brick-red, acuminate, reflexed 60-120 degrees from the flower axis; anthers 5-10 mm long, exerted to fully included within the perianth when viewed from the side; [low to moderate elevations, more widespread].
- 8 Perianth yellow (rarely orange to red); mid-stem leaves 5-10× as long as wide *L. canadense* var. *canadense*
- 8 Perianth orange to red; mid-stem leaves 2-5× as long as wide *L. canadense* var. *editorum*
- 6 Tepals at maturity recurved fully to form a circular shape; flowers pendant to nodding; style and stamens long-exserted.
- 9 Style reddish, more-or-less the same color as the tepals; [west of the Blue Ridge]..... *L. michiganense*
- 9 Style pale green, strongly contrasting with tepals; [Blue Ridge and eastward and southward].
- 10 Leaves 7-26 cm long, oriented horizontally and with arching (downward) tips; leaf whorls 6-24; plants 1.2-2.8 m tall; inflorescences (1-) 5-22 flowered, tepals orange to reddish *L. superbum*
- 10 Leaves 2-16 cm long, ascending or +- horizontal but tips not arched; leaf whorls 1-12; plants 0.6-2.0 m tall; inflorescences 1-4 (-7) flowered, tepals yellow to orange (to dusky red).
- 11 Leaf whorls 1-5; petals yellow to yellow-orange; [of East Gulf Coastal plain pitcher-plant bogs and relatively open blackwater baygalls and streamheads in nw. FL and sw. AL]..... *L. iridollae*
- 11 Leaf whorls 1-12; petals orange to dusky red; margins of tree-shrub streamheads in the Coastal Plain of se. VA, c. NC, and c. SC]..... *L. pyrophilum*

Lilium canadense Linnaeus var. *canadense*, Yellow Canada Lily. Mt (NC, VA): wet meadows; uncommon (rare in NC). June-July; late July-September. Apparently ranging from New Brunswick to NC, mostly east of or in the Appalachians; the range is obscured by different interpretations of var. *canadense* and var. *editorum*, by spread from cultivation, and by collections of cultivated plants not clearly so indicated. Some of our plants are definitely var. *canadense*. [= F; < *L. canadense* – RAB, C, FNA, G, GW, S; = *L. canadense* ssp. *canadense* – K, W, Z; = *L. canadense* ssp. *typicum* – Y]

Lilium canadense Linnaeus var. *editorum* Fernald, Red Canada Lily. Mt, Pd (GA, NC, SC, VA): wet meadows, forest openings; uncommon (rare in GA, NC, and SC). June-July; late July-September. According to Adams & Dress (1982), who emphasize tepal color in distinguishing the infraspecific taxa, ranging from New Brunswick west to s. Ontario, south (mostly in and west of the Appalachians) to n. GA and n. AL. Wherry (1946) and Fernald (1950) emphasize leaf shape, and secondarily flower color, restricting var. *editorum* to a range from PA west to s. IN, south to AL. There has been considerable confusion between *L. canadense* var. *editorum* and *L. grayi*, and populations in sw. VA appear to show some intergradation between the two. [= F; < *L. canadense* – RAB, C, FNA, G, GW, S; = *L. canadense* ssp. *editorum* (Fernald) Wherry – K, W, Y, Z]

Lilium catesbaei Walter, Pine Lily, Catesby's Lily, Leopard Lily. Cp (FL, GA, NC, SC, VA): pine savannas, sandhill seeps; common (uncommon in GA, NC, and SC, rare in VA). Mid June-mid September; September-November. Se. NC south to FL and west to LA, on the Coastal Plain. [= GW, S, WH; > *L. catesbaei* var. *catesbaei* – RAB; > *L. catesbaei* var. *longii* Fernald – RAB, C, F, G; > *L. catesbaei* ssp. *catesbaei* – K; > *L. catesbaei* ssp. *longii* (Fernald) Wherry – K, Y; > *L. catesbaei* ssp. *typicum* – Y]

Lilium grayi S. Watson, Gray's Lily, Roan Lily. Mt (NC, VA): bogs, seepages, grassy balds, moist forests, and wet meadows, at medium to high elevations; rare. June-July; August-September. A Southern Appalachian endemic: sw. VA, nw. NC, and ne. TN. Clearly related to *L. canadense* (especially through the somewhat intermediate *L. canadense* var. *editorum*), *L. grayi* appears to be adapted for pollination by Ruby-throated Hummingbirds (Adams & Dress 1982). See *L. canadense* var. *editorum* for additional comments. The two most important strongholds for this rare lily (each with thousands of individuals) are the Roan Mountain massif (Avery and Mitchell counties, NC and Carter County, TN), where it was first found, and Long Hope Valley (Watauga and Ashe counties, NC). Otherwise, it tends to occur in very small, isolated populations in bogs, wet pastures, and seeps. In addition to the characters in the key, *L. grayi* can be distinguished in sterile condition from the 2 more common species of the Mountains by leaves, which are widest near the midpoint, typically 4-6× as long as wide (vs. distinctly wider towards the apex in *L. michauxii*, and widest near the midpoint but typically 10× or more as long as wide in *L. superbum*). Certainly one of our most beautiful wild plants! [= RAB, C, F, G, K, S, W, Y, Z]

Lilium iridollae M.G. Henry, Panhandle Lily, Pot-o'-gold Lily. Cp (AL, FL): bogs; rare. Panhandle FL west to s. AL. [= FNA, GW, WH; < *L. iridollae* – K (also see *L. pyrophilum*)] {not yet keyed}

* *Lilium lancifolium* Thunberg, Tiger Lily. Pd (NC, VA): disturbed areas, trash heaps; rare, native of Asia. The more familiar name, *L. tigrinum*, must be rejected in favor of the older *L. lancifolium* (Ingram 1968). [= C, FNA, K; = *L. tigrinum* Ker-Gawler – F, G]

Lilium michauxii Poirét, Carolina Lily. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): dry upland forests, ridges, slopes, and ridges; common (uncommon in Coastal Plain, rare in FL). July-August; September-October. S. VA, e. TN, n. AL, c. MS, and e. LA south to s. SC, panhandle FL, s. AL, s. MS, and s. LA. [= C, F, FNA, G, GW, K, W, WH, X, Y, Z; < *L. michauxii* – RAB (also see *L. pyrophilum*); = *L. carolinianum* Michaux – S]

Lilium michiganense Farwell, Michigan Lily. Mt (GA): wet prairies and calcareous flatwoods; rare. Ontario and MN south to e. TN, KY, nw. GA, AL, AR, and e. OK. [= C, F, FNA, K; < *L. superbum* – G; = *L. canadense* Linnaeus ssp. *michiganense* (Farwell) Boivin & Cody]

Lilium philadelphicum Linnaeus var. *philadelphicum*, Wood Lily. Mt (GA, NC, VA): grassy balds, moist to wet meadows (especially in thin soils over rock), open woodlands; rare. June-July; August-October. The species ranges from ME west to British Columbia, south to NC, nw. GA (Jones & Coile 1988), KY, IL, IA, NE, and NM. Var. *philadelphicum*, distinguished by the leaves whorled at 3-6 nodes, 10-15 (-25) mm wide, the capsule 2.5-3.5 (-5) cm long, is eastern and mainly Appalachian, ranging from ME and s. Ontario south to NC, GA, and KY. Var. *andinum* (Nuttall) Ker-Gawler, distinguished by the leaves whorled at 1-2 nodes, 3-10 mm wide, the capsule 4-8 cm long, is western, ranging from OH, MN, and British Columbia south to NM. [= C, F, G, K; < *L. philadelphicum* – RAB, FNA, S, W; = *L. philadelphicum* ssp. *philadelphicum* – Y]

* *Lilium philippinense* Baker, Philippine Lily. Cp (FL, NC): escaped from cultivation; rare, native of the Philippines. July-August. This species is introduced at various locations in the Southeast, including Florida and Louisiana (Kartesz 1999), and has been documented from Richmond Co. NC (Sorrie, pers. comm.). In North America there has been confusion between this species and *L. formosanum* A. Wallace. [= FNA, K, WH]

Lilium pyrophilum M.W. Skinner & Sorrie, Sandhills Bog Lily. Cp (NC, SC, VA): peaty seepage bogs in the Sandhills and peaty swamp margins in the upper Coastal Plain; rare. Late July-mid August. See Skinner & Sorrie (2002) for detailed information on this species. Superficially, this plant is somewhat similar to *L. michauxii*, in its one to several, nodding flowers with recurved tepals, relatively few whorls of leaves, and relatively few leaves per whorl. In addition to the character used in the key, this plant differs from *L. michauxii* in the following ways: flowers not fragrant or only slightly so (vs. flowers strongly fragrant), leaves generally widest near the middle (vs. widest towards the tip), leaves only slightly paler below and lacking a pronounced waxy sheen (vs. leaves strongly bicolorated, the lower surface much paler and with a waxy sheen), and habitat in sphagnum, peaty bogs (vs. in xeric to mesic, sandy to loamy soils). [= FNA, X; < *L. michauxii* – RAB (misapplied to these plants); < *L. iridollae* M.G. Henry – K, misapplied]

Lilium superbum Linnaeus, Turk's-cap Lily, Lily-royal. Mt (GA, NC, VA), Pd (GA, NC, VA), Cp (FL, GA, NC, SC, VA): cove forests and moist forests, moist ravines, blackwater stream swamps; common (rare in Piedmont, rare in NC Coastal Plain, rare in FL). July-August; September-October. MA and s. NY south to ne. NC, panhandle FL, and c. MS, southwards primarily in the Appalachians, but extending across the Piedmont to the Coastal Plain of VA and ne. NC, and with a similarly odd extension south of the southern terminus of the Appalachians into the Coastal Plain of GA, w. FL, AL, and MS. The plants of blackwater swamps of se. VA and ne. NC are very narrow-leaved and yellow-tepaled; this form, atypical in habitat, range, and morphology has been referred to as "*Lilium* species 1" (Weakley 1993). Further study is needed to determine whether it is a distinct taxon (species, or variety of *L. superbum*) or only a form. [= C, F, FNA, GW, K, S, W, WH, X, Y, Z; < *L. superbum* – G (also see *L. michiganense*)]

Medeola Linnaeus 1753 (Indian Cucumber-root)

A monotypic genus, an herb of eastern North America. References: Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Identification notes: *Medeola* is sometimes mistaken (when sterile) for *Isotria*; *Medeola* has a wiry stem, floccose-pubescent, *Isotria* a fleshy, glabrous stem.

Medeola virginiana Linnaeus, Indian Cucumber-root. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist forests, usually with acidic soils; common (rare in FL). Mid April-mid June; September-October. Québec and Ontario west to MN, south to GA, panhandle FL and LA. The tuber is white, crisp, tasting cucumber-like, usually about 5 cm long and 5 mm in diameter. Bell (1974) describes patterns of vegetative growth. Flowering plants have a second, smaller whorl of leaves; the flowers are borne on recurved pedicels beneath the top whorl of leaves. In fruit, however, the pedicels are ascending or erect, bringing the fruits above the top whorl. When the berries are ripe, the leaves of the upper whorl become scarlet at the base, presumably acting as an attractant to animals. [= RAB, C, F, FNA, G, GW, K, S, W, WH]

Prosartes D. Don 1839 (Fairybells, Mandarin)

A genus of 6 species, of temperate e. North America, w. North America, and e. Asia. Dahlgren, Clifford, & Yeo (1985) suggest that American species of *Disporum* are generically distinct from Asiatic species and should be segregated in the genus *Prosartes*, a distinction made as long ago as 1839. Asian *Disporum* species lack the distinctly reticulate venation of our plants, have strictly glabrous foliage (vs. pubescent), have spurred tepals (vs. unspurred), blue or black berries (vs. red or straw-colored), tripartite stigma (vs. not), and other differences (Jones 1951). Further study of generic limits by Shinwari et al. (1994) shows that the separation into *Prosartes* of the American species often assigned to *Disporum* is clearly warranted, based on morphological and karyological grounds. *Prosartes* is much more closely related to *Streptopus* than to (Asian) *Disporum*; (Asian) *Disporum* is more closely related to *Uvularia*. References: Johnson (1968)=Z; Shinwari et al. (1994)=Y; Jones (1951); Tamura, Utech, & Kawano (1992); Utech in FNA (2002a); Tamura in Kubitzki (1998a).

- 1 Fruit glabrous, ellipsoid, weakly triangular in cross-section, the surface smooth and shiny, red when ripe; tepals greenish, unspotted; leaves relatively many, small, and moderately spreading relative to the stem; leaf glabrous on the surface above (except for sparsely pubescent on the midrib and main veins), densely pubescent on the midrib below, sparsely pubescent on the surface below; leaf pubescence weak, often twisted or curled apically (as seen at 10-20× magnification), the leaf therefore very soft to the touch..... *P. lanuginosa*
- 1 Fruit pubescent, strongly 3-lobed (or 1- or 2-lobed by abortion), the surface textured and dull, whitish-tan when ripe; tepals whitish, spotted with purple; leaves relatively few, large, and widely spreading relative to the stem; leaf sparsely pubescent on the surface and veins above and below; leaf pubescence stiff, generally straight and perpendicular to the surface (as seen at 10-20× magnification), the leaf therefore slightly rough to the touch..... *P. maculata*

Prosartes lanuginosa (Michaux) D. Don, Yellow Mandarin, Yellow Fairybells. Mt (GA, NC, SC, VA), Pd (VA): deciduous forests, especially coves; common. April-May; August-September. Primarily an Appalachian species: NY and s. Ontario south to n. GA (Jones & Coile 1988) and AL. [= FNA, K, Y; = *Disporum lanuginosum* (Michaux) Nicholson – RAB, C, F, G, S, W, Z]

Prosartes maculata (Buckley) A. Gray, Spotted Mandarin, Nodding Mandarin. Mt (GA, NC, VA): nutrient-rich deciduous forests, especially cove forests; rare (NC Watch List, VA Rare). April-May; July-August. AL, n. GA, KY, MI, w. NC, OH, TN, w. VA, and WV; its distribution is rather fragmented, and the species is considered rare or uncommon in every state in its range. The fruits are more reminiscent of *Uvularia* than of *Prosartes lanuginosa*. [= FNA, K, Y; = *Disporum maculatum* (Buckley) Britton – RAB, C, F, G, S, W, Z]

Streptopus Michaux 1803 (Twisted-stalk)

A genus of about 7 species, temperate to subarctic in Europe, e. Asia, and North America. References: Utech in FNA (2002a); Fassett (1935)=Z; Tamura in Kubitzki (1998a).

- 1 Leaf margins and nodes not coarsely ciliate; leaves strongly cordate-clasping; fruit ellipsoid..... *S. amplexifolius* var. *amplexifolius*
- 1 Leaf margins and nodes coarsely ciliate; leaves sessile to somewhat cordate-clasping (especially the lower leaves of robust individuals); fruit globose..... *S. lanceolatus* var. *lanceolatus*

Streptopus amplexifolius (Linnaeus) A.P. de Candolle var. *amplexifolius*, White Mandarin, Pagoda-bells. Mt (NC, VA): moist forests and seepages at high elevations; rare. Late April-early June; late July-September. The species is circumboreal, the range fragmented. Fassett recognized seven varieties, the plants in our area being var. *americanus*. The species ranges from Greenland and Labrador to MN, south (in the mountains and disjunctly) to NC, and in the west from AK (and Kamchatka) south to NM and AZ, in Japan, and in the Alps in Europe. [= K; < *S. amplexifolius* – RAB, FNA, W; > *S. amplexifolius* var. *americanus* J.A. & J.H. Schultes – C, F, G, Z; < *Tortipes amplexifolius* (Linnaeus) Small – S]

Streptopus lanceolatus (Aiton) Reveal var. *lanceolatus*, Eastern Rose Mandarin, Eastern Twisted-stalk. Mt (GA, NC, VA): moist forests at high elevations; uncommon (rare in GA). Late April-early June; late July-September. Fassett (1935) recognized four varieties in *S. roseus*. Reveal (1993c) determined that the correct name for the species widely known as *S. roseus* is *S. lanceolatus* (Aiton) Reveal, and he transferred Fassett's varieties. Fassett (and Reveal) considered *S. lanceolatus* var. *lanceolatus*

[*S. roseus* var. *perspectus* Fassett] to range from s. Labrador west to MI, south to NJ and PA, and in the mountains to w. NC, e. TN, and ne. GA (Jones & Coile 1988). *S. lanceolatus* var. *longipes* (Fernald) Reveal [*S. roseus* var. *longipes* (Fernald) Fassett] is midwestern, from s. Ontario and nw. PA west to MI, WI, MN, and s. Manitoba. Var. *curvipes* (Vail) Fassett is western, ranging from AK to se. British Columbia and nw. OR. Var. *roseus* was considered to be a Southern Appalachian endemic, differing from var. *perspectus* only in having the pedicel-peduncles entirely glabrous (vs. ciliate with few to many multicellular hairs). The number of hairs on the peduncles varies constantly, and recognition of two varieties in e. North America does not appear warranted; all of our material is then *S. lanceolatus* var. *lanceolatus* [*S. roseus* var. *roseus* (in a broader sense)], which does differ significantly from the more western varieties. [*S. roseus* – RAB, S, W; *S. roseus* var. *roseus* – C, F, G, Z; *S. roseus* var. *perspectus* Fassett – C, F, G, Z; *S. lanceolatus* – FNA; *S. lanceolatus* var. *lanceolatus* – K; *S. lanceolatus* var. *roseus* (Michaux) Reveal – K]

***Tricyrtis* Wallich 1826 (Toadlily)**

A genus of about 18 species, of e. Asia. References: Tamura in Kubitzki (1998a).

* *Tricyrtis hirta* (Thunberg) Hooker, Toadlily, native of e. Asia, is cultivated as an ornamental and may escape or persist, as in se. PA (Rhoads & Klein 1993). [= K]

***Tulipa* Linnaeus 1753 (Tulip)**

A genus of about 150 species, of temperate Eurasia (especially w. and c. Asia). References: Tamura in Kubitzki (1998a); Straley & Utech in FNA (2002a).

* *Tulipa sylvestris* Linnaeus, Tulip, Dutch-lily, is very commonly cultivated and is "occasionally naturalized in moist meadows, fields and roadsides" in se. PA (Rhoads & Klein 1993) and MD (Kartesz 1999). [= FNA, K]

MARANTACEAE Petersen in Engler & Prantl 1888 (Arrowroot Family)

A family of about 31 genera and 550 species, herbs and vines, nearly pantropical (absent from Australia), and rarely extending into subtropical and warm temperate regions. References: Kennedy in FNA (2000); Andersson in Kubitzki (1998b).

***Thalia* Linnaeus 1753 (Thalia)**

A genus of 6-7 species, in subtropical and tropical America. References: Kennedy in FNA (2000); Andersson in Kubitzki (1998b).

- | | | |
|---|--|------------------------------|
| 1 | Flowers crowded on the rachis, the zigzag internodes 2-3 mm long; leaves pilose at the base on the upper surface; bracts of the inflorescence white-pruinose | <i>Th. dealbata</i> |
| 1 | Flowers separated on the rachis, the zigzag internodes 5-10 mm long; leaves glabrous at the base on the upper surface; bracts of the inflorescence green or purple, not pruinose | <i>Th. geniculata</i> |

Thalia dealbata Fraser ex Roscoe, Powdery Thalia, Powdery Alligator-flag. Cp (AL, GA, KY, LA, MS, SC): swamp forests, wet ditches, brackish marshes; rare. May-September; June-October. Ne. SC south to GA, west to TX and OK, north in the Mississippi Embayment to w. KY, s. IL, and se. MO. [= RAB, FNA, GW, K, S]

Thalia geniculata Linnaeus, Lilies, Bent Thalia, Bent Alligator-flag. Cp (AL, FL, LA): ponds, sloughs, marshes; rare. AL, FL, LA, south through the New World tropics. [= FNA, GW, K, S, WH]

MAYACACEAE Kunth 1840 (Bogmoss Family)

A family of a single genus and 4-10 species, of tropical to warm temperate America and Africa. References: Faden in FNA (2000); Thieret (1975); Stevenson in Kubitzki (1998b).

***Mayaca* Aublet 1775 (Bogmoss)**

A genus of 4-10 species, of tropical to warm temperate America and Africa. References: Thieret (1975)=Z; Faden in FNA (2000); Stevenson in Kubitzki (1998b).

Mayaca fluviatilis Aublet, Bogmoss. Cp (FL, GA, NC, SC): marshes, streams, swamp forests, shores of natural lakes, seepage areas, in saturated soil or variously submersed; common. May-July. Se. NC south to c. peninsular FL, west to se. TX; West Indies; Central America to South America. The two species previously recognized appear to be only different growth

forms, induced by different hydrologic conditions. [= FNA, GW, K, WH, Z; > *M. aubletii* Michaux – RAB, S; > *M. fluviatilis* – RAB, S]

MELANTHIACEAE Batsch 1802 (Bunchflower Family)

A family of about 16 genera and 170 species, mostly temperate and northern hemisphere, but extending into South America. Further modifications of the circumscription of the Melanthiaceae (and re-assignments of genera) may be needed; see Zomlefer et al. (2001) and Tamura et al. (2004). References: Dahlgren, Clifford, & Yeo (1985); Zomlefer (1997a)=Z; Zomlefer (1996, 2003); Tamura in Kubitzki (1998a); Zomlefer et al. (2001).

- 1 Leaves 3, whorled at the summit of the stem.....[*Trillium* in **TRILLIACEAE**]
- 1 Leaves many, not whorled at the summit of the stem.
 - 2 Leaves 1-2 mm wide, linear, stiff, sclerified..... *Xerophyllum*
 - 2 Leaves 3-150 mm wide, linear, obovate, or oblanceolate, not notably stiff.
 - 3 Flowers pink..... *Helonias*
 - 3 Flowers white, cream, yellowish, or greenish, or brownish.
 - 4 Inflorescence a panicle.
 - 5 Inflorescence axes scurfy-pubescent; seeds winged; leaves **either** linear **or** broader, < 14 cm wide..... *Veratrum*
 - 5 Inflorescence axes glabrous; seeds not winged (though sometimes angled); leaves linear, < 2 cm wide.
 - 6 Leaves strongly keeled, (5-) 10-20 mm wide; plant colonial, from thick, hard, horizontal, short-creeping rhizomes covered with fibrous old leaf bases; inner tepals (petals) 7-17 mm long, distinctly clawed, acute-acuminate at the tip, bearing 2 glands well above the base..... *Zigadenus*
 - 6 Leaves slightly or not at all keeled, 2-12 mm wide; plant solitary, from a bulbous or semibulbous base; inner tepals (petals) 3-6 or 7-12 mm long, clawed or not, bearing either a single (sometimes obscure to essentially invisible) gland near the base or a bilobed gland well above the base.
 - 7 Inner tepals (petals) 7-12 mm long, clawed, with a single bilobed gland borne well above the base; [of calcareous habitats in the Mountains]..... *Anticlea*
 - 7 Inner tepals 3-10 mm long, not clawed, with a single, unlobed gland borne near the base (this often difficult or impossible to see, consisting only of a greenish line at the very base of the tepal); [of acid habitats of the Mountains, Piedmont, and Coastal Plain]..... *Stenanthium*
 - 4 Inflorescence a spike or raceme.
 - 8 Leaves obovate, distinctly wider towards the rounded tip, 15-60 cm wide..... *Chamaelirium*
 - 8 Leaves linear, with parallel margins, 2-23 mm wide.
 - 9 Inflorescence a spike..... *Schoenocaulon*
 - 9 Inflorescence a raceme.
 - 10 Basal leaves many, 4-23 mm wide; capsule 5-7 mm long, 5-7 mm wide; bulb broadly ovoid..... *Amianthium*
 - 10 Basal leaves 1-3, 2-7 mm wide; capsule 7-9 mm long, 3-4 mm wide; bulb cylindrical..... *Stenanthium densum*

Amianthium A. Gray 1837 (Fly-poison)

A monotypic genus, an herb of temperate e. North America. Zomlefer et al. (2001) confirm that *Amianthium* should be treated as a monotypic genus. *Amianthium* has a chromosome number of $2n=32$ (Zomlefer & Smith 2002). Like *Zigadenus*, containing very toxic alkaloids. References: Zomlefer (1997a)=Z; Zomlefer & Judd (2002)=Y; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Amianthium muscitoxicum (Walter) A. Gray, Fly-poison. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): mesic forests, pine savannas, meadows; common (uncommon in FL). May-July; July-September. S. NY, PA, MO, and OK, south to Panhandle FL, MS, and AR. [= FNA, K, Y; = *A. muscaetoxicum* – RAB, C, F, G, GW, W, WH, orthographic variant; = *Chrosperma muscaetoxicum* (Walter) Kuntze – S; = *Zigadenus muscitoxicus* (Walter) Regel – Z]

Anticlea Kunth 1843 (Death-camas)

A genus of about 15 species, of North America south to Guatemala, and e. Asia. *Anticlea* has a chromosome number of $2n=32$ (Zomlefer & Smith 2002). References: Zomlefer (1997a)=Z; Zomlefer & Judd (2002)=Y; Zomlefer et al. (2001); Schwartz in FNA (2002a).

Anticlea glauca Kunth, White Death-camas. Mt (NC, VA): limestone and dolostone woodlands, glades, cliffs, and outcrops; rare (NC Rare, VA Watch List). July-August; September-October. *A. glauca* is the more eastern component of a complex variously treated as two species or a single variable species, with or without recognized varieties or subspecies. *A. elegans* (in the broadest sense) ranges from Québec and NY west to AK, south to n. OH, n. IN, n. IL, MO, IA, NM, AZ, and n. Mexico; disjunct in the mountains of VA and NC. Two taxa have often been recognized, at the specific, subspecific, or varietal level. The more eastern taxon (epithet "*glauca*" – see synonymy below) ranges from New Brunswick west to ND, south to NC, TN, and MO, and is distinguished by glaucous foliage, paniculate inflorescence, and tepals often purplish or brownish basally. The more western taxon (epithet "*elegans*"), occurring east to the MN and MO, has the foliage greener, the inflorescence often only racemose, and the tepals yellow. [< *Anticlea elegans* (Pursh) Rydberg – Y; = *Zigadenus elegans* Pursh ssp. *glauca*

(Nuttall) Hultén – K; = *Z. glaucus* Nuttall – RAB, F, W, Z; = *Z. elegans* var. *glaucus* (Nuttall) Preece – C; < *Z. elegans* – FNA; = *Zygadenus glaucus* – G, orthographic variant; < *Anticlea chlorantha* (Richardson) Rydberg – S, misapplied]

Chamaelirium Willdenow 1808 (Devil's-bit)

A monotypic genus, an herb of temperate e. North America. Perhaps better placed in the segregate family Chionographidaceae. References: Zomlefer (1997a)=Z; Tamura in Kubitzki (1998a); Utech in FNA (2002a).

Chamaelirium luteum (Linnaeus) A. Gray, Devil's-bit. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist slopes, bottomlands, wet savannas; common (rare in Coastal Plain). March-May; September-November. MA west to Ontario, OH, s. IN, and AR, south to FL and LA. The ecological amplitude and morphologic variability of this species is surprising; it needs additional, more careful, study. *Ch. obovale* Small (or other previously unnamed entities) may warrant recognition at some level. [= RAB, C, F, FNA, G, GW, K, W, WH, Z; > *Ch. luteum* – S; > *Ch. obovale* Small – S]

Helonias Linnaeus 1753 (Swamp Pink)

A monotypic genus, an herb of temperate e. North America. Although *Helonias* has traditionally been considered a monotypic genus, Takahashi & Kawano (1989) have suggested that the closely related *Heloniopsis* and *Ypsilandra* (both of e. Asia) may be congeneric. Perhaps better to be placed in the segregate family Heloniadaceae. References: Zomlefer (1997a)=Z; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Helonias bullata Linnaeus, Swamp Pink. Mt (GA, NC, SC, VA), Cp (DE, MD, NJ, VA): bogs, usually under dense shrubs in peaty soils, in the VA Coastal Plain in acidic sandy seepage swamps; rare. April-May; June-July. S. NY and NJ to e. VA on the Coastal Plain, and from w. VA through w. NC to nw. SC and ne. GA (Jones & Coile 1988) in the Blue Ridge Mountains. The flowering scape elongates markedly in fruit, reaching 1 m in height. [= RAB, C, F, FNA, GW, G, K, S, W, Z]

Schoenocaulon A. Gray 1837 (Feathershank)

A genus of about 24 species of s. North America, Central America, and n. South America. *Schoenocaulon* has a chromosome number of $2n=16$ (Zomlefer & Smith 2002). References: Zomlefer et al. (2006)=Z; Zomlefer (1997a); Tamura in Kubitzki (1998a); Frame in FNA (2002a).

Schoenocaulon dubium (Michaux) Small, Florida Feathershank. Cp (FL, GA): dry pine savannas, sandhills, scrub; uncommon (rare in GA). S. GA and n. peninsular FL south to s. peninsular FL. [= FNA, K, S, WH, Z]

Stenanthium (A. Gray) Kunth 1843 (Featherbells, Featherfleece)

A genus of about 4 species, herbs of e. North America. *Stenanthium*, as redefined by Zomlefer & Judd (2002), has a chromosome number of $2n=20$, excludes a w. North American and an e. Asian species previously included, and includes some taxa formerly placed in *Zigadenus* (Zomlefer & Smith 2002). References: Zomlefer & Judd (2002)=Y; Zomlefer (1997a)=Z; Wofford (2006); Utech in FNA (2002a); Schwartz in FNA (2002a); Tamura in Kubitzki (1998a). Key adapted in part from F, the taxa and key needing further evaluation and (probably) alteration.

- 1 Tepals obovate, the tip rounded-obtuse.
 - 2 Inflorescence a raceme; flowers all bisexual; plants 3-10 dm tall; flowering April-early June; [of the Coastal Plain (in our area)] *S. densum*
 - 2 Inflorescence a panicle of racemes; lower flowers of the inflorescence branches bisexual and fertile, the upper staminate or superficially perfect but the pistils nonfunctional (not producing fruits); plants 5-20 dm tall; flowering July-August; [of the Mountains of NC and VA and Coastal Plain of GA westward to LA] *S. leimanthoides*
- 1 Tepals lanceolate, the tip acute-acuminate.
 - 3 Inflorescence a diffuse panicle up to 3 dm wide, the terminal racemose portion reduced or absent; flowers on mid-portion of lateral branches with pedicels 1.6-4 mm long, spaced 8-15 mm apart; uppermost non-bracteal stem leaf 4-14 cm above ground level; flowering mid September-mid October; [of sandstone rockhouses of the Cumberland Plateau] *S. diffusum*
 - 3 Inflorescence branched but not diffuse, typically up to 1.5 dm wide, the terminal racemose portion present and up to 3 dm long; flowers on mid-portion of lateral branches with pedicels 0.3-1.1 mm long, generally spaced 3-7 mm apart; uppermost non-bracteal stem leaf 22-66 cm above ground level; flowering May-late August; [of various wet to dry habitats, widespread in our area].
 - 4 Larger leaves to 30 mm wide, thin and membranous-translucent, not strongly ribbed; panicle dense, the branches stiffly ascending, the flowers crowded; perianth 5-10 mm long, greenish; capsules oblong or subcylindric, 9-10 mm long, erect; seeds 5-8 mm long; leaves distributed all along the stem, nearly as dense just below the panicle as at the base; plant to 2.2 m tall and the stem to 2 cm in diameter near its base; [of bogs and wet meadows] *S. gramineum* var. *robustum*
 - 4 Larger leaves to 15 mm wide, firm to coriaceous, strongly ribbed; panicle diffuse, the branches ascending, spreading, or drooping, the flowers scattered; perianth 3-8 (-10) mm long, whitish; capsules ovoid to urceolate, 6-9 mm long, deflexed; seeds 5-5.5 mm long; leaves mainly near the base, rapidly reduced upwards; plant to 1.9 m tall and the stem to 1 cm in diameter near its base; [of dry to moist upland forests].

- 5 Perianth 5-10 mm long; plant to 1.9 m tall, the stem 4-10 mm in diameter near the base.....*S. gramineum* var. *gramineum*
 5 Perianth 3-4.5 (-5.0) mm long; plant to 1.0 m tall, the stem 1.5-5 mm in diameter near the base.....*S. gramineum* var. *micranthum*

Stenanthium densum (Desrousseau) Zomlefer & Judd, Crow-poison. Cp (FL, GA, NC, SC, VA): pine savannas, pine flatwoods; common (rare in VA). April-early June; late May-July. Se. VA south to c. peninsular FL and west to se. TX, on the Coastal Plain. See *Z. leimanthoides* for discussion of the taxonomy of the 2 species. *Z. densus* is superficially very similar to *Amianthium muscitoxicum*; *Z. densus* has a conical capsule, 2× or more as long as broad (vs. about 1× as long as broad), a bladeless purple sheath, 3-8 cm long, enclosing the leaves at the base (vs. sheath absent, all leaves with blades), and basal leaves usually 1-3 in number, 3-6 (-10) mm wide (vs. mostly 4 or more in number, mostly 7-10 mm wide). [= Y; = *Zigadenus densus* (Desrousseau) Fernald – RAB, C, GW, K, Z; < *Zigadenus densus* (Desrousseau) Fernald – FNA, WH (also including *S. leimanthoides*); = *Zygadenus densus* – G (an orthographic variant); *Tracyanthus angustifolius* (Michaux) Small – S]

Stenanthium diffusum Wofford, Rockhouse Featherbells. Mt (TN): sandstone rockhouses; rare. Mid-September-mid-October. Endemic to the Cumberland Plateau of ne. TN (known from Fentress, Morgan, Pickett, Scott counties). See Wofford (2006).

Stenanthium gramineum (Ker-Gawler) Morong var. *gramineum*, Common Featherbells. Cp (FL, GA, NC, VA), Pd (GA, NC, VA), Mt (NC): moist forests, grassy balds, to 1700m in elevation; uncommon (rare in FL). July-early September; August-October. PA west to IL and MO, south to ne. NC, Panhandle FL, and TX. [= F, K; < *S. gramineum* – RAB, C, FNA, G, S, W, WH, Z]

Stenanthium gramineum (Ker-Gawler) Morong var. *micranthum* Fernald, Small Featherbells. Mt (GA, NC, SC, VA), Pd (GA, NC, VA): dry upland forests and woodlands; uncommon. July-early September; August-October. W. VA and TN south to n. AL. [= F, K; < *S. gramineum* – RAB, C, FNA, G, S, W, Z]

Stenanthium gramineum (Ker-Gawler) Morong var. *robustum* (S. Watson) Fernald, Giant Featherbells, Bog Featherbells. Mt (NC, VA?): wet meadows, bogs; rare (NC Watch List). July-early September; August-October. PA south to w. NC. [= F, K; = *S. robustum* S. Watson – S; < *S. gramineum* – RAB, C, FNA, G, W, Z]

Stenanthium leimanthoides (A. Gray) Zomlefer & Judd, Pinebarrens Death-camas. Mt (NC, VA), Cp (FL, GA): high elevation rock outcrops, shrub balds, seepage areas at high elevations, in the Coastal Plain in sandhill bogs and wet pine savannas; rare. July-August; September-October. As currently interpreted, with a peculiar and disjunct range, occurring on the Coastal Plain of se. NY (Long Island), NJ, and DE, in the mountains from WV and VA south through w. NC to (allegedly) AL, and on the Gulf Coastal Plain, from s. GA to LA. Unpublished studies involving (primarily) Gulf Coast populations of *S. leimanthoides* have questioned its distinctness from *S. densum*. Our plants seem very distinct in many ways. Perhaps inflorescence characters do not reliably distinguish the two taxa and so-called *S. leimanthoides* of the Gulf Coast is a paniculate form of *Z. densus* (the real distinguishing characters not at present clear). *S. leimanthoides* in the east follows much the same phylogeographic patterns as *Kalmia buxifolia* and *Xerophyllum asphodeloides*; the 3 species occurring together in the Pine Barrens of the s. NJ Coastal Plain and at 1900 m elevation on the summit of Grandfather Mountain, Avery County, NC! [= Y; = *Zigadenus leimanthoides* A. Gray – RAB, C, F, GW, K, W, Z; < *Zigadenus densus* (Desrousseau) Fernald – FNA, WH; = *Zygadenus leimanthoides* – G (an orthographic variant); = *Oceanoros leimanthoides* (A. Gray) Small – S]

Veratrum Linnaeus 1753 (White-hellebore)

A genus of about 55 species, herbs of temperate Northern Hemisphere. *Veratrum* is here interpreted broadly, including *Melanthium*, following the molecular phylogeny work of Zomlefer et al. (2003). References: Zomlefer (1997)=Z; McNeal & Shaw in FNA (2002a); Bodkin & Utech in FNA (2002a); Tamura in Kubitzki (1998a); Zomlefer et al. (2003).

- 1 Leaves all linear, 1-2 (-3) cm wide; tepals greenish white to creamy white (sometimes fading brownish); [section *Fuscoveratrum*].....*V. virginicum*
- 1 Leaves (at least the basal) oblanceolate to obovate or elliptic, 3-15 cm wide (the upper leaves sometimes linear); tepals yellowish green, green, or maroon.
 - 2 Leaves strongly plicate, 6-15 cm wide; tepals pubescent, 8-13 mm long, 3-5 mm wide, with a conspicuous pair of glands near the base of the tepal blade (these sometimes more or less fused); filament free from the tepals; [section *Veratrum*].....*V. viride*
 - 2 Leaves not at all to slightly plicate, 3-14 cm wide; tepals glabrous, 4-9 mm long, 1-3 mm wide (3-5 mm wide in *V. latifolium*), with either conspicuous (*V. latifolium*) or diffuse (*V. parviflorum* and *V. woodii*) glands; filament fused to the basal claw of the tepal; [section *Fuscoveratrum*].
 - 3 Tepals 3-5 mm wide, the blade of the tepal abruptly narrowed to a claw, the blade nearly as wide as long, with undulate margins, and 2 conspicuous succulent glands; leaves 1-7 cm wide.....*V. latifolium*
 - 3 Tepals 1-3 mm wide, the blade gradually narrowed to the base, the blade much longer than wide, with entire margins, and with diffuse glandular areas; leaves 3-12.5 cm wide.
 - 4 Tepals pale to olive green, 4-7 mm long; ovaries glabrous; leaves 4.5-14 cm wide; [common, of the Mountains in our area].....*V. parviflorum*
 - 4 Tepals dark maroon, 6-9 mm long; ovaries densely pubescent; leaves 3-10 cm wide; [rare disjunct in our area].....*V. woodii*

Veratrum latifolium (Desrousseau) Zomlefer, Crisped Bunchflower. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): moist forests; uncommon (rare in Coastal Plain and Piedmont) (GA Special Concern). July-August; September-October. An Appalachian endemic: CT south to NC and SC. [= Z; = *Melanthium hybridum* Walter – RAB, C, F, G, W, misapplied; = *Melanthium latifolium* Desrousseau – FNA, K, S]

Veratrum parviflorum Michaux, Mountain Bunchflower. Mt (GA, NC, SC, VA): moist to rather dry forests, up to at least 1700m; common. July-early September; August-October. A Southern Appalachian endemic: WV and KY south to VA, NC, n. GA, and TN. [= RAB, C, G, W, S, Z; = *Melanthium parviflorum* (Michaux) S. Watson – F, FNA, K]

Veratrum virginicum (Linnaeus) Aiton, Bog Bunchflower, Virginia Bunchflower. Cp (FL, GA, NC, SC, VA), Mt, Pd (NC, SC, VA): savannas, bogs, seepage bogs, wet forests; uncommon (rare in FL and SC). June-August; August-October. Widespread in e. North America. This species is superficially quite similar to *Zigadenus glaberrimus*, which, in addition to characters given in the family key, has the stem glabrous (vs. pubescent in *M. virginicum*). [= WH, Z; = *Melanthium virginicum* Linnaeus – RAB, C, F, FNA, G, GW, K, W; > *Melanthium dispersum* Small – S; > *Melanthium virginicum* – S]

Veratrum viride Aiton, White-hellebore, Indian Poke, Green Hellebore, Cornhusk Lily. Mt (GA, NC, VA), Pd (VA): seeps, streambanks, wet boulderfields; common (GA Special Concern). June-August; July-September. Québec and Ontario south in the mountains to NC, TN, and ne. GA. The closely related *V. eschscholtzii* A. Gray, sometimes treated as *V. viride* ssp. *eschscholtzii* (A. Gray) A. & D. Löve or *V. viride* var. *eschscholtzii* (A. Gray) Breitung, is western, ranging from AK to OR. This plant is strongly poisonous; an insecticide was formerly manufactured from the roots. [= RAB, C, F, G, GW, S, W, Z; < *V. viride* – K; = *V. viride* var. *viride* – FNA; *V. viride* ssp. *viride*]

Veratrum woodii J.W. Robbins ex Wood, Ozark Bunchflower, Wood's False-hellebore. Mt (GA, NC), Cp (FL, GA): circumneutral soil of woodlands over mafic rocks (such as amphibolite) or other calcareous substrates, hammocks; rare. July; September. Primarily Ozarkian, but extending in scattered populations eastwards as far as FL Panhandle (Gadsden and Liberty counties), sw. GA, nw. GA, sc. TN, and sw. NC (Polk County). [= C, F, G, Z; = *Melanthium woodii* (J.W. Robbins ex Wood) Bodkin – FNA, K; > *V. intermedium* Chapman – S]

Xerophyllum Michaux 1803 (Turkeybeard, Beargrass)

A genus of 2 species, rather woody herbs of temperate North America. The other species in the genus is the western beargrass, *X. tenax* (Pursh) Nuttall, widely distributed in the western Cordillera. Perhaps better placed in the segregate family Xerophyllaceae. References: Zomlefer (1997)=Z; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Xerophyllum asphodeloides (Linnaeus) Nuttall, Turkeybeard, Beargrass, Mountain-asphodel. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): dry ridges and slopes in the mountains, primarily in dry, strongly acidic sites which burn periodically, such as pine/heath woodlands and forests, heath balds, and xeric oak forests, most of the populations in the Blue Ridge Escarpment, often associated with *Pinus rigida* or *P. pungens*, disjunct to similar sites on quartzite monadnocks of the upper Piedmont; uncommon (GA Rare, NC Watch List, SC Rare). May-June; July-August. In two disjunct areas; the Coastal Plain of s. NJ and DE, and the Southern Appalachians from w. VA south to e. TN, w. NC, nw. SC, and ne. GA. Sterile plants resemble tussocks of a bunchgrass, but the leaf bases are white and flattened and are obviously not those of a grass. The leaves remain green throughout the winter. [= RAB, C, F, FNA, G, K, W, Z]

Zigadenus Michaux 1803 (Death-camas)

As redefined, a monotypic genus of se. North America. A molecular systematics study by Zomlefer et al. (2001) gives strong support to a treatment recognizing *Zigadenus* as monotypic (*Zigadenus glaberrimus*), *Anticlea* (including for our area the former *Zigadenus elegans* ssp. *glaucus*), *Stenanthium* (including for our area *Stenanthium* spp. and the former *Zigadenus densus* and *Z. leimanthoides*). *Zigadenus* (as redefined) has a tentatively reported chromosome number of 2n=52 (Zomlefer & Smith 2002). References: Zomlefer (1997)=Z; Tamura in Kubitzki (1998a); Zomlefer et al. (2001); Schwartz in FNA (2002a). [also see *Anticlea*, *Stenanthium*]

Zigadenus glaberrimus Michaux, Large Death-camas, Snakeroot. Cp (FL, GA, NC, SC, VA): sandhill seepage bogs, pine savannas, pocosin edges; common (rare in VA). Late June-early September; August-November. Se. VA south to Panhandle FL, west to se. TX, on the Coastal Plain. [= RAB, C, F, FNA, GW, K, WH, Z; = *Zygadenus glaberrimus* – G, S (an orthographic variant)]

NAJADACEAE A.L. de Jussieu 1789 (Naiad Family)

A family of a single genus and about 40 species, nearly cosmopolitan. The Najadaceae should perhaps be merged into the Hydrocharitaceae (Haynes, Holm-Nielsen, & Les 1998b). References: Haynes in FNA (2000); Haynes (1979)=Z; Haynes & Hellquist (1996); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Najas Linnaeus 1753 (Naiad, Bushy-pondweed, Water-nymph)

A genus of about 40 species, nearly cosmopolitan. Probably better included in the Hydrocharitaceae (Angiosperm Phylogeny Group (2003)). References: Haynes in FNA (2000); Haynes (1979)=Z; Haynes & Hellquist (1996); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Identification notes: Counts of leaf-teeth do not include the broadened, sheathing base of the leaf. Seeds are necessary for the identification of most species.

1 Plants dioecious; lower side of the midvein of the leaves prickly; [subgenus *Najas*] [N. marina]

- 1 Plants monoecious; lower side of the midvein of the leaves smooth; [subgenus *Caulinia*].
- 2 Leaf-teeth multicellular, evident at 10× magnification, 7-15 per side; leaves becoming recurved late in the season; seed-coat pitted, the areoles distinctly wider than long, in ca. 12-18 ladder-like rows *N. minor*
- 2 Leaf-teeth unicellular, not evident at 10× magnification, > 20 per side (except 13-17 per side in *N. gracillima*); leaves spreading to ascending; seed-coat smooth or pitted, if present the areoles longer than wide or about as long as wide.
- 3 Seeds smooth, glossy, obovate, broadest above the middle; anthers 1-locular *N. flexilis*
- 3 Seeds pitted, dull, cylindric, fusiform, or elliptic, broadest at the middle; anthers 1- or 4-locular.
- 4 Style offset from the apex of the seed; anthers unilocular *N. gracillima*
- 4 Style at the apex of the seed; anthers 4-locular *N. guadalupensis* var. *guadalupensis*

Najas flexilis (Willdenow) Rostkovius & Schmidt, Northern Naiad. Cp, Pd, Mt (VA): lakes and rivers; uncommon. July-August. Newfoundland west to Ontario, south to VA, MD, MO, and NE; also in the west from Alberta and Saskatchewan south to OR and UT. [= C, F, FNA, G, K, S, W, WV, Z; = *Naias flexilis* – S, orthographic variant]

Najas gracillima (A. Braun ex Engelmann) Magnus, Slender Naiad, Bushy Naiad. Mt, Cp (NC, SC, VA), Pd (NC, VA): ponds and lakes; uncommon. July-October. Nova Scotia west to MN, south to NC, AL, and MO; disjunct in CA. Haynes (1979) reports that this species cannot tolerate pollution and is apparently declining in abundance. [= RAB, C, F, FNA, G, K, W, WV, Z]

Najas guadalupensis (Sprengel) Magnus var. *guadalupensis*, Common Naiad, Southern Naiad. Cp, Pd, Mt (GA, NC, SC, VA): lakes and rivers; common. July-October. Var. *guadalupensis* ranges from ME west to Alberta and WA, south to n. South America. Haynes (1979) interprets the species as including 3 other varieties – var. *floridana* Haynes & Wentz (in FL, north to AL and GA and to be sought in SC), var. *muenscheri* (Clausen) Haynes (endemic to the Hudson River), and var. *olivacea* (Rosendahl & Butters) Haynes (nearly limited to states bordering the Great Lakes). They differ in characteristics of the leaf and seed (see Haynes 1979). Haynes & Hellquist (1996) treat all infraspecific taxa as subspecies rather than varieties. [= C, Z; < *Najas guadalupensis* – RAB, F, G, GW, W, infraspecific taxa not distinguished; = *Najas guadalupensis* ssp. *guadalupensis* – FNA, K; < *Naias guadelupensis* – S, orthographic variant]

* *Najas minor* Allioni, Spinyleaf Naiad. Pd, Mt, Cp (GA, NC, SC, VA): ponds, lakes, and reservoirs, particularly where eutrophic; uncommon, native of Eurasia. July-October. This species is apparently a rather recent introduction to North America, now widespread in e. North America. Haynes (1979) reports that it is becoming more abundant in e. North America because of its tolerance for polluted, eutrophic waters. [= RAB, C, F, FNA, G, GW, K, W, WV, Z]

Najas filifolia Haynes, Narrowleaf Naiad. Cp (GA): lakes; rare (GA Special Concern). Sw. GA (Jones & Coile 1988) to FL (Haynes in FNA 2000). [= FNA, K, Z; = *Najas ancistrocarpa* A. Braun – GW] {not yet keyed}

Najas guadalupensis (Sprengel) Magnus var. *floridana* Haynes & Wentz, in GA and FL. [= Z; = *Najas guadalupensis* ssp. *floridana* Haynes & Wentz] Haynes & C.B. Hellquist – FNA, K; < *Najas guadelupensis* – GW; < *Naias guadelupensis* – S, orthographic variant] {not yet keyed}

Najas marina Linnaeus, Holly-leaf Naiad, occurs both n. and s. of our area and should be sought. It occurs in brackish or calcareous waters. It is dioecious (vs. monoecious in our 4 species), and has the lower side of the midvein of the leaves prickly (vs. smooth in our 4 species). [= C, F, FNA, G, K; = *Naias marina* – S, orthographic variant]

NARTHECIACEAE E.M. Fries 1846 (Bog-asphodel Family)

As circumscribed here (excluding Tofieldiaceae), a family of about 4 genera and 40 species, of e. Asia, e. North America, n. Europe, and the Guyana Shield of n. South America. Reveal & Zomlefer (1998) place the Nartheciaceae in the monotypic order Nartheciales. References: Zomlefer (1997b, 1999); Reveal & Zomlefer (1998); Tamura in Kubitzki (1998a).

Aletris Linnaeus 1753 (Colic-root, Stargrass)

As circumscribed here (including *Metanarthecium*), a genus of about 30 species, of e. North America and e. Asia. References: Weigant (2002)=X; Ward (1978)=Y; Zomlefer (1997b)=Z; Tamura in Kubitzki (1998a); Sullivan in FNA (2002a).

- 1 Perianth white to creamy-white (rarely pinkish).
- 2 Perianth 6-10 mm long, cylindric at anthesis, 2-3× as long as broad, the perianth lobes narrowly deltoid (longer than broad); fruiting perianth markedly constricted above the middle *A. farinosa*
- 2 Perianth 4-6 mm long, campanulate at anthesis, ca. 1× as long as broad, the perianth lobes broadly deltoid (about as long as broad); fruiting perianth somewhat narrowed above the base *A. obovata*
- 1 Perianth golden yellow (often faded in dried specimens).
- 3 Perianth short-cylindric or campanulate at anthesis, 1-2× as long as broad, the perianth lobes not spreading; [flowering May-July] *A. aurea*
- 3 Perianth long-cylindric at anthesis, 2.5-4× as long as broad, the perianth lobes spreading somewhat; [flowering March-May] *A. lutea*

Aletris aurea Walter, Golden Colic-root. Cp (FL, GA, NC, SC, VA): pine savannas, seepage bogs, pine flatwoods; uncommon (VA Rare). Mid May-July; August. S. MD south to ne. FL, Panhandle FL, west to e. TX and se. OK. Flowering several weeks later than *A. farinosa* when growing together. [= RAB, C, F, FNA, G, GW, K, S, WH, X, Y, Z]

Aletris farinosa Linnaeus, Northern White Colic-root, Mealy Colic-root, Stargrass. Cp (FL, GA, NC, SC), VA, Mt, Pd (GA, NC, SC, VA): pine savannas, pine flatwoods, seepage bogs, upland woodlands, roadbanks; common (rare in FL). Late

April-early June; July-August. S. ME, s. Ontario, and se. MN south to s. GA, FL (Wunderlin 1998), LA, and TX, the only species of the genus not restricted (or nearly so) to the Coastal Plain. [= RAB, C, F, FNA, G, GW, K, S, W, WH, X, Z]

Aletris lutea Small, Yellow Colic-root. Cp (FL, GA): pine savannas; common (uncommon in GA). E. GA (in immediate proximity to the SC border) south to s. FL, and west to e. LA (Weigant 2002). The report by F of *A. lutea* Small as far north as se. VA is in error. A specimen collected in se. NC has recently been annotated as *A. lutea*, but it appears to be *A. farinosa*. [= FNA, GW, K, S, WH, X, Y, Z]

Aletris obovata Nash ex Small, Southern White Colic-root. Cp (FL, GA, SC): pine savannas; uncommon (rare in GA and SC). May-early June; August. Se. SC south to c. peninsular FL, west to e. Panhandle FL. Reported for MS (Kartesz 1999), but the report rejected (likely based on a misidentified specimen). [= RAB, FNA, GW, K, S, WH, X, Y, Z]

Lophiola Ker-Gawler 1814 (Golden Crest)

A monotypic genus (As here interpreted to include *L. americana* and *L. septentrionalis*), of temperate e. North America. *Lophiola* is quite unlike any other genus, and its familial position has been problematic. Often treated in the Haemodoraceae (as in RAB, C, G, GW), *Lophiola* is better placed in the Nartheciaceae (or a very broad Liliaceae), as shown by studies of anatomy, pollen ultrastructure, and chemistry, though its placement in that family is also not without problems (Edwards, Churchill, & Weiss 1970; Simpson & Dickison 1981; Simpson 1983; Zavada 1983; Zavada, Xu, & Edwards 1983; Ambrose 1985).
References: Zomlefer (1997b)=Z; Tamura in Kubitzki (1998a); Robertson in FNA (2002a).

Lophiola aurea Ker-Gawler, Golden Crest. Cp (AL, FL, GA, LA, MS, NC): wet savannas, bogs, marshes, ditches adjacent to these natural habitats; common (uncommon in AL, GA, MS, rare in LA and NC). Late May-June; August-September. FL Panhandle and sw. GA west to e. LA; se. NC; n. DE and s. NJ; Nova Scotia. Only a few populations remain in NC. [= C, FNA, K, S, Z; > *L. americana* (Pursh) Wood – RAB, F (the NJ-DE material), G, GW; > *L. septentrionalis* Fernald – F (the Nova Scotian material)]

Narthecium Hudson 1762 (Asphodel)

A genus of about 8 species, many narrow disjuncts, collectively with a very fragmented distribution in the temperate Northern Hemisphere. References: Small (1924)=Z; Zomlefer (1997b)=Y; Utech in FNA (2002a); Tamura in Kubitzki (1998a); Schumacher (1947)=X; Sorrie & Weakley (in prep.)=Q.

- 1 Tepals 4-6 mm long; capsule 10-14 mm long; pedicels stout, about as long as the subtending bracts; [of Coastal Plain seeps and savannas].....
.....*N. americanum*
- 1 Tepals 6-9 mm long; capsule 8-10 mm long; pedicels slender, distinctly longer than the subtending bracts; [of Mountain bogs].....
.....*N. montanum*

Narthecium americanum Ker-Gawler, Yellow Asphodel. Cp (DE, NJ, SC): wet seepages or savannas; rare. June-July; August-September. S. NJ and DE; disjunct in c. SC (where apparently extirpated, though possibly still present in mucky seepages in the Sandhills). [= C, F, G, Q, X; < *Narthecium americanum* – RAB, FNA, GW, K, W, Y (also see *N. montanum*); = *Abama americana* (Ker-Gawler) Morong – S, Z]

Narthecium montanum (Small) C.H. Grey, Appalachian Yellow Asphodel. Mt (NC): bogs; rare (apparently extinct). With the drainage of the bogs of East Flat Rock, Henderson County, this species was apparently extirpated. It is still possible that it will be relocated, in bogs in Henderson or Transylvania counties, NC. Small (1924, 1933) considered the NC mountain population a distinct species, based on its longer, more slender pedicels, larger sepals, petals, and stamens, and smaller capsules. Schumacher (1947), in the most thorough worldwide assessment of *Narthecium*, agreed, and Sorrie & Weakley (in prep.) concur, based on an herbarium analysis of the characters of all taxa in the genus. The morphological distinctions (and geographic disjunction) between *N. montanum* and *N. americanum* are as great or greater as those between most species recognized worldwide in the genus. [= Q, X; < *Narthecium americanum* – RAB, FNA, GW, K, W, Y; = *Abama montana* Small – S, Z]

ORCHIDACEAE A.L. de Jussieu 1789 (Orchid Family)

A family of about 800 genera and 19,000 species, perennial (rarely annual), mycotrophic herbs and vines. Only a small minority of orchid species worldwide are terrestrial rather than epiphytic; only *Epidendrum magnoliae* in our flora shows the common epiphytic habit. References: Luer (1972) and Luer (1975)=L; Correll (1950)=X; Romero-González, Fernández-Concha, Dressler, Magrath, & Argus in FNA (Williams & Williams (1983); Brown (2003); Homoya (1993); Correll (1937); Pridgeon et al. (1999a, 1999b, 1999c).

Identification notes: Flowering plants are necessary for use of the key to genera.

- 1 Plant epiphytic, growing on the branches or trunks of trees in swamps *Epidendrum*
- 1 Plant terrestrial, growing on soil.
- 2 Leaves absent at flowering, or with a solitary leaf with a purplish undersurface withering at about the time of flowering.
- 3 Flowers with a spur *Tipularia*
- 3 Flowers without a spur.

- 4 Flowers white, the lip, sepals, and petals all predominantly white..... *Spiranthes*
- 4 Flowers pink, greenish, yellowish, or purplish, the lip sometimes white or marked with white, the sepals and petals colored.
 - 5 Flower solitary; lip strongly bearded *Arethusa*
 - 5 Flowers in spikes or racemes; lip not bearded.
 - 6 Lip with 2 fleshy ridges near the base; pollinia 4; plants mycoparasitic and never with leaves *Corallorhiza*
 - 6 Lip with 3-7 ridges near the base or extending most of the length of the lip; pollinia 4 or 8; plants either mycoparasitic and never with leaves, or with a plicate winter leaf withering shortly before flowering.
 - 7 Plants with a plicate winter leaf withering shortly before flowering (the withered remnant usually detectable); pollinia 4; veins of the petals and sepals not strikingly different in color than the intervein areas; lip with 3 ridges *Aplectrum*
 - 7 Plants never with leaves and saprophytic; pollinia 8; veins of the petals and sepals strikingly different in color than the intervein areas; lip with 5-7 ridges *Hexalectris*
- 2 Leaves present at flowering (*Cleistis* with a foliaceous bract at the summit of the stem).
 - 8 Leaf solitary.
 - 9 Leaf basal.
 - 10 Flower with a spur *Platanthera*
 - 10 Flower without a spur.
 - 11 Flower solitary; leaf plicate *Arethusa*
 - 11 Flowers in a raceme or spike.
 - 12 Flowers relatively large, purple, pink, to rarely white, the lip oriented upwards *Calopogon*
 - 12 Flowers relatively small, whitish, the lip oriented downwards *Spiranthes*
 - 9 Leaf cauline.
 - 13 Flower solitary (-4), pink (rarely nearly white); [subfamily *Vanilloideae*; tribe *Pogonieae*].
 - 14 Sepals brown to purple, linear or narrowly oblanceolate, 3-6.5 cm long, about 5 mm wide; leaf coriaceous *Cleistis*
 - 14 Sepals pink (rarely white), elliptic or oblanceolate, 1.3-2.7 cm long, 3-11 mm wide; leaf herbaceous *Pogonia*
 - 13 Flowers in spikes or racemes, 5-many, reddish, yellowish, or greenish.
 - 15 Flower without a spur; petals, sepals, and lip 1-3 mm long *Malaxis*
 - 15 Flower with a spur; petals, sepals, and lip 3-25 mm long *Platanthera*
 - 8 Leaves 2-many.
 - 16 Lip inflated, pouch-like or slipper-like, 2-6 cm long *Cypripedium*
 - 16 Lip not inflated, or if so, then 0.3-1.1 cm long.
 - 17 Leaves basal (sometimes with bladeless sheaths upwards on the stem).
 - 18 Leaves plicate.
 - 19 Lip oriented upwards; flowers pink to white *Calopogon*
 - 19 Lip oriented downwards; flowers greenish, purplish-brown, or yellowish.
 - 20 Leaves ovate to elliptic, 2-5× as long as wide; plant 1-3 dm tall *Liparis*
 - 20 Leaves linear-lanceolate, > 10× as long as wide; plant 3-14 dm tall *Pteroglossaspis*
 - 18 Leaves smooth, often creased at the midrib, but not plicate.
 - 21 Lip with a spur.
 - 22 Flowers bicolored, the lip white, the sepals and petals pink; leaves 2 *Galearis*
 - 22 Flowers not bicolored, the lip, petals, and sepals similarly colored; leaves 2-5.
 - 23 Lip deeply divided into 3 linear segments; leaves 3-5 *Habenaria*
 - 23 Lip entire; leaves 2 *Platanthera*
 - 21 Lip without a spur.
 - 24 Leaf blades more-or-less horizontally oriented, flat against the ground or 1-2 cm above it.
 - 25 Lip oriented upwards *Ponthieva*
 - 25 Lip oriented downwards.
 - 26 Leaves variegated with white; lip saccate *Goodyera*
 - 26 Leaves green, not variegated; lip not saccate *Spiranthes*
 - 24 Leaf blades ascending.
 - 27 Leaves linear to lanceolate, 2-4 *Spiranthes*
 - 27 Leaves elliptic to ovate, 2.
 - 28 Lip broadest near its apex *Liparis*
 - 28 Lip broadest near its base, tapering to the apex *Malaxis*
 - 17 Leaves cauline.
 - 29 Leaves plicate; lip saccate *Epipactis*
 - 29 Leaves smooth, often creased at the midrib, but not plicate; lip not saccate.
 - 30 Leaves whorled, terminating the stem *Isotria*
 - 30 Leaves alternate or opposite, not terminating the stem.
 - 31 Leaves 2, opposite, near the middle of the stem *Listera*
 - 31 Leaves (2-) 3-many, alternate, variously distributed on the stem.
 - 32 Lip without a spur; leaves 0.8-8.0 cm long.
 - 33 Leaves ovate, 0.8-2.0 cm long *Triphora*
 - 33 Leaves linear or narrowly lanceolate, 1-8 cm long *Zeuxine*
 - 32 Lip with a spur; leaves linear, lanceolate, or narrowly elliptic, 5-40 cm long (at least the larger > 5 cm long, except in *Platythelys*, with lanceolate to ovate leaves 1.5-6.5 cm long).
 - 34 Leaves 1.5-6.5 cm long, with inflated tubular sheaths; plants from creeping rhizomes [*Platythelys*]
 - 34 Leaves 5-40 cm long, sessile; plants from fleshy or fusiform roots.
 - 35 Lip divided into 3 linear divisions, the divisions not further divided, fringed, or eroded *Habenaria*
 - 35 Lip not divided into 3 divisions, or divided into 3 divisions but the divisions not linear.
 - 36 Spur saccate, 2-3 mm long, the orifice minute *Coeloglossum*
 - 36 Spur elongate and slender, 4-50 mm long, the orifice larger *Platanthera*

Aplectrum Torrey 1818 (Puttyroot, Adam-and-Eve)

A genus of 2 species, 1 in e. North America and 1 in Japan (Sheviak & Catling in FNA (2002a). References: Sheviak & Catling in FNA (2002a).

Identification notes: Like *Tipularia*, *Aplectrum* has a single, overwintering leaf, purplish on the underside, and withering prior to the appearance of the flowering stalk; they are readily separable by leaf shape, texture, and veining (see *Tipularia*).

Aplectrum hyemale (Muhlenberg ex Willdenow) Torrey, Puttyroot, Adam-and-Eve. Mt, Pd (GA, NC, SC, VA), Cp (VA): rich, mesic forests; common. May-June. Québec and MN, south to SC, GA, AL, and OK. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Arethusa Linnaeus 1753 (Dragon's-mouth, Bog-rose, Arethusa)

A monotypic genus (Sheviak & Catling in FNA 2002). References: Sheviak & Catling in FNA (2002a).

Identification notes: The combination of the following characters serves to separate *Arethusa* from other, vaguely similar, genera: flowers magenta, solitary and scapose, the lip descending, the other 2 petals and 3 sepals erect or ascending. *Calopogon* has a leafy stem, the inflorescence a raceme, the lip crested but oriented upwards. *Pogonia* has solitary, pale pink flowers, with a descending, bearded lip, but the stem has a well-developed, flat leaf, 1-2.5 cm wide, the flower is subtended by a well-developed, leaf-like, floral bract, and the 2 lower sepals are spreading-descending. *Cleistes* has 3 brown to purplish brown sepals.

Arethusa bulbosa Linnaeus, Dragon's-mouth, Bog-rose, Arethusa. Mt (NC, SC, VA): bogs; rare (NC Endangered, SC Rare, VA Rare). May-June. Widespread in ne. North America, south to NJ and IN and to NC and SC in the mountains, rare south of ME, MI, and MN. The lanceolate, plicate leaf (15-30 cm long, 2-4 mm wide) develops after flowering, the flowering plant thus consisting (aboveground) of the solitary scape only. The lip is crested with fimbriate ridges, marked with yellow and purple. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Bletilla Reichenbach f.

* *Bletilla striata* (Thunberg) Reichenbach f., Urn Orchid. Cp (FL): lawns, roadsides; rare, native of China. Known only from Escambia County, FL. [= FNA, K, WH] {add to genus key}

Calopogon R. Brown 1813 (Grass-pink)

A genus of 5 species (one with two varieties), endemic to e. North America. The only other taxon is *C. tuberosus* var. *simpsomii* (Chapman) Magrath of s. FL. References: Goldman, Magrath, & Catling in FNA (2002a); Trapnell, Hamrick, & Giannasi (2004)=Z. Goldman, van den Berg, & Griffith (2004)=Y. Key adapted from Goldman, Magrath, & Catling in FNA (2002a).

Identification notes: The lip is oriented upwards.

- 1 Petals wider towards the tip than towards the base; lip usually as wide as or wider than long; flowers strongly fragrant.....*C. multiflorus*
- 1 Petals equal or narrower towards the tip than towards the base; lip usually narrower than long; flowers scentless or mildly fragrant.
 - 2 Leaf appressed to the inflorescence during flowering; flowers < 1 cm apart; flowers not fragrant; flowers on same plant opening simultaneously*C. barbatus*
 - 2 Leaf not appressed to the inflorescence during flowering; flowers > 1 cm apart; flowers faintly to distinctly fragrant; flowers on same plant opening nearly simultaneously to sequentially.
 - 3 Lateral sepals 10-15 mm long, falcate, widely spreading*C. pallidus*
 - 3 Lateral sepals 15-28 mm long, weakly falcate to straight.
 - 4 Flowers of each plant opening nearly simultaneously; dilated distal portion of middle lip lobe usually much narrower than long, triangular to broadly rounded; stigma typically flat against column surface; corms elongate, forked*C. oklahomensis*
 - 4 Flowers of each plant opening sequentially; dilated distal portion of middle lip lobe usually much wider than long, typically anvil-shaped; stigma at angle to column surface; corms globose to elongate, not forked.....*C. tuberosus* var. *tuberosus*

Calopogon barbatus (Walter) Ames, Bearded Grass-pink. Cp (FL, GA, NC, SC): savannas, sandhill seeps; uncommon (rare in NC and SC). April-early May. A Southeastern Coastal Plain endemic: se. NC south to s. FL and west to e. LA. [= RAB, FNA, GW, K, L, WH, X, Y, Z; = *Limodorum parviflorum* (Lindley) Nash – S]

Calopogon multiflorus Lindley, Many-flowered Grass-pink. Cp (FL, GA, NC, SC?): pine savannas, pine flatwoods, pitcher plant bogs; rare. May-June. A Southeastern Coastal Plain endemic: e. GA south to s. FL, west to LA; disjunct in Onslow Co., NC. Reported for SC (Charleston-Berkeley Co. line) (P. McMillan 2000). [= FNA, GW, K, L, WH, X, Y, Z; = *Limodorum multiflorum* (Lindley) C. Mohr – S]

Calopogon oklahomensis D.H. Goldman, Oklahoma Grass-pink. Cp (GA, SC): pine savannas; rare. E. SC south to s. GA, west to e. TX, north in the eastern Great Plains to MN. [= FNA, Y, Z]

Calopogon pallidus Chapman, Pale Grass-pink. Cp (FL, GA, NC, SC, VA): savannas, sandhill seeps; uncommon (VA Rare). May-July. A Southeastern Coastal Plain endemic: se. VA south to s. FL and west to LA. [= RAB, C, F, FNA, G, GW, K, L, WH, X, Y, Z; = *Limodorum pallidum* (Chapman) C. Mohr – S]

Calopogon tuberosus (Linnaeus) Britton, Sterns, & Poggenburg var. *tuberosus*, Common Grass-pink. Cp (FL, GA, NC, SC, VA), Mt, Pd (GA, NC, SC, VA): savannas, sandhill seeps, floating peat mats, in the Piedmont and Mountains in bogs; uncommon (rare in Mountains and Piedmont). April-July. Widespread in e. North America, also in Cuba and the West Indies; var. *simpsonii* (Chapman) Magrath occurs in FL, Cuba, and the West Indies. [= FNA, K, L, WH, Y, Z; = *C. pulchellus* R. Brown – F, G, RAB, X; < *C. tuberosus* – C, GW, W; = *Limodorum tuberosum* Linnaeus – S]

Cleistes L.C. Richard ex Lindley 1840 (Spreading Pogonia, Rosebud Orchid)

As traditionally circumscribed, a genus of about 55 species, primarily of tropical America. The circumscription of this genus is uncertain (Cameron & Chase 1999; Cameron et al. 1999; Pridgeon et al. 1999c); it appears that North American "*Cleistes*" is not closely related to South American *Cleistes* (which includes the type of the genus), and either a new genus will need to be named to house our two species, or alternatively, *Pogonia*, *Isotria*, and N. American "*Cleistes*" could be combined into *Pogonia* (a generic disposition popular many decades ago). References: Catling & Gregg (1992)=Z; Gregg & Catling in FNA (2002a); Gregg (1991).

- 1 Column 13-19 mm long; lip 21-33 (-38.5) mm long, the basal 3/4 of the central keel of the lip with 5-7 discontinuous and irregular ridges; sepals (24-) 30-40 (-55) mm long; petals 21-36 mm long; distance between median leaf and floral bract 3-16 cm; fresh flowers with strong vanilla scent (Coastal Plain populations) or odorless (Mountain and upper Piedmont populations) *C. bifaria*
- 1 Column 21-29 mm long; lip (26-) 34-56 mm long, the basal 3/4 of the central keel of the lip with 1-3 parallel, continuous low ridges; sepals (31-) 40-56 (-65) mm long; petals 27-53 mm long; distance between median leaf and floral bract 9-20 cm; fresh flower with daffodil-like odor..... *C. divaricata*

Cleistes bifaria (Fernald) Catling & Gregg, Small Spreading Pogonia. Mt (GA, NC, SC, VA), Cp (FL, GA, NC, SC), Pd (GA, NC, SC): savannas, sandhill seeps, moist to fairly dry meadows, dry ridgetops under pines (where seasonally moist); uncommon (rare in GA and VA). May-July. The species ranges in the Mountains and Piedmont from WV south through w. VA, e. KY, w. NC, and e. TN to w. SC, n. GA and n. AL, and in the Coastal Plain from se. NC to c. peninsular FL and west to e. LA (Catling & Gregg 1992). Catling & Gregg (1992) make a convincing case for the recognition of *C. bifaria* and *C. divaricata* as specifically distinct, based on differences in morphology, range, phenology (in the sympatric portions of their ranges), and floral fragrance. The co-occurrence of the two species at such sites as the Green Swamp, Brunswick County, NC, where phenologically separated, supports their taxonomic status. Where co-occurring, *C. bifaria* flowers on average about 10 days before *C. divaricata*. More recent studies (Smith et al. 2004) suggest the probability that montane and Coastal Plain populations of "*C. bifaria*" represent 2 different species. [= FNA, K, Z; < *C. divaricata* – RAB, C, G, GW, L, S, W, X; = *C. divaricata* var. *bifaria* Fernald – F; = *Pogonia bifaria* (Fernald) P.M. Brown & Wunderlin – WH]

Cleistes divaricata (Linnaeus) Ames, Large Spreading Pogonia. Cp (FL, GA, NC, SC, VA): pine savannas; uncommon (rare in VA). May-mid June. S. NJ to sw. GA and ne. FL, in the Coastal Plain; reports from more inland areas are based on a taxonomic concept of *C. divaricata* including *C. bifaria*. [= FNA, K, Z; < *C. divaricata* – RAB, C, G, GW, K, L, S, W, X (also see *C. bifaria*); = *C. divaricata* var. *divaricata* – F; = *Pogonia divaricata* (Linnaeus) R. Brown – WH]

Coeloglossum Hartman 1820 (Frog Orchid, Long-bracted Orchid)

Usually regarded as a monotypic genus, of north temperate regions of the Old and New World. However, *Coeloglossum* is probably not distinct from *Dactylorhiza* Neck. ex Nevski; *Coeloglossum* is the older name, but *Dactylorhiza* has been accepted for nomenclatural conservation. The taxonomic and nomenclatural outcome is uncertain. References: Sheviak & Catling in FNA (2002a); Bateman, Pridgeon, & Chase (1997)=Z; Pridgeon et al. (1997, 1999b).

Coeloglossum viride (Linnaeus) Hartman var. *virescens* (Muhlenberg ex Willdenow) Luer, Long-bracted Frog Orchid. Mt (NC, VA): moist woods; uncommon (rare in NC). April-June. The species is circumboreal; var. *virescens* is e. Asian and North American, in e. North America south in the Appalachians to NC. It is generally more "southern" than the typic var. *viride*, which is more completely circumboreal, widespread in n. Eurasia and far northern North America. [= K, L, W; = *Habenaria viridis* (Linnaeus) R. Brown var. *bracteata* (Muhlenberg ex Willdenow) Reichenbach ex A. Gray – RAB, C, F, G, X; < *Coeloglossum viride* (Linnaeus) Hartman – FNA; = *Coeloglossum bracteatum* (Muhlenberg ex Willdenow) Parlatores – S; < *Dactylorhiza viridis* (Linnaeus) R.M. Bateman, Pridgeon, & M.W. Chase – Z]

Corallorhiza Gagnebin 1755 (Coralroot)

A genus of about 15 species, distributed in north temperate regions of the Old and New World. The closest relative of *Corallorhiza* in our flora is *Aplectrum* (Freudenstein 1992). The mycotrophic nature of *Corallorhiza* is well established, but the exact means of the transfer of nutrients from the fungal hyphae to the orchid is not yet understood. References: Freudenstein (1992, 1997, 1999)=Z; Magrath & Freudenstein in FNA (2002a).

- 1 Lip with two lateral teeth or lobes; lateral sepals spreading to down-curved.
 - 2 Sepals 1-veined[*C. trifida*]
 - 2 Sepals 3-veined.
 - 3 Middle lobe of lip expanded slightly or not at all distally, the ratio of the width of the dilated part to the base of the mid-lobe < 1.5; floral bracts averaging 0.5-1.0 mm long *C. maculata* var. *maculata*
 - 3 Middle lobe of the lip distinctly expanded, the ratio of the width of the dilated part to the base of the midlobe greater than 1.5; floral bracts averaging 1.0-2.8 (-4.5) mm long *C. maculata* var. *occidentalis*
- 1 Lip without lateral teeth or lobes (though sometimes erose or minutely toothed near its apex); lateral sepals arching, upcurved, or forward-directed.
 - 4 Sepals and petals 5-7.5 mm long; dorsal sepal > 4.5 mm long, 3-nerved; flowering April-July.
 - 5 Lip with prominent, thickened, involute margins; flowering mid to late July *C. bentleyi*
 - 5 Lip planar; flowering April-May *C. wisteriana*
 - 4 Sepals and petals 3-4.5 mm long; dorsal sepal < 4.5 mm long, 1-nerved; flowering August-October.
 - 6 Perianth closed or nearly so (cleistogamous); lip 1.7-2.2 mm wide, straight; column lacking or with only poorly developed basal ventral auricles; stigma 0.2-0.5 mm wide *C. odontorhiza* [*cleistogamous form*]
 - 6 Perianth open (chasmogamous); lip 2.1-3.7 mm wide, bent downwards at a nearly right angle; column with 2 prominent auricles at the base on the ventral surface; stigma 0.7-1.0 mm wide *C. odontorhiza* [*chasmogamous form*]

Corallorhiza bentleyi Freudenstein. Mt (VA): dry-mesic to mesic forests, especially near roadsides; rare. The species was recently named and was known (at the time of publication) from only a single population (Freudenstein 1999). This species is now known from Monroe and Pocahontas counties, WV, and Giles, Alleghany, and Bath counties, VA. It is most closely related to *C. striata* Lindley. [= FNA, Z]

Corallorhiza maculata (Rafinesque) Rafinesque var. *maculata*, Eastern Spotted Coralroot. Mt (GA, NC, VA): moist forests, northern hardwood forests; uncommon (GA Special Concern). July-August. Var. *maculata* is irregularly distributed in much of North America, primarily northern, from Newfoundland Québec, and MN south to PA, OH, and IN, and south in the Appalachians to ne. GA, in the west from British Columbia south to s. CA, s. AZ, and s. NM. Var. *mexicana* (Lindley) Freudenstein *ined.* is restricted to Mexico. [= FNA, Z; < *C. maculata* – RAB, C, F, G, K, L, W, X; < *Corallorhiza maculata* – S, orthographic variant]

Corallorhiza maculata (Rafinesque) Rafinesque var. *occidentalis* (Lindley) Ames, Western Spotted Coralroot. Mt (VA): forests; rare (VA Rare). May-July. Var. *occidentalis* (Lindley) Ames has a distribution similar to var. *maculata*, except that in the east it ranges south only to PA, s. Ontario, and WI, with disjunct populations in e. WV (Pocahontas County; Morton et al. 2004) and VA. [= FNA, Z; < *C. maculata* – RAB, C, F, G, K, L, W, X; < *Corallorhiza maculata* – S, orthographic variant]

Corallorhiza odontorhiza (Willdenow) Poirlet, Autumn Coralroot. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): forests; uncommon (rare in FL). August-October. The cleistogamous form is the more common, and is widespread in e. North America, from ME, NY, s. Ontario, MI, and MN south to SC, c. GA, ne. FL, c. AL, n. MS, c. AR, and e. OK. The chasmogamous form is less common, and is scattered in ne. United States and adjacent Canada, in Ontario, CT, PA, MI, IA, IN, DC, NC, and TN, and in Mexico (Chiapas, Distrito Federal, Guerrero, Hidalgo, Jalisco, México, Michoacán, Morelos, Oaxaca, Puebla, Sonora), Guatemala, and Nicaragua. It may be recognized as a variety; see synonymy. [= RAB, C, F, G, L, W, WH, X; > *C. odontorhiza* var. *pringlei* (Greenman) Freudenstein – FNA, K, Z; > *C. odontorhiza* var. *odontorhiza* – FNA, K, Z; = *Corallorhiza odontorhiza* – S, orthographic variant; > *C. pringlei* Greenman]

Corallorhiza wisteriana Conrad, Spring Coralroot. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist forests; uncommon (rare north of FL). April-May. Widespread in e. North America, from NJ, PA, OH, IN, IL, MO, and OK south to FL, and TX, and also in the Rockies from MT and w. SD south to s. Mexico. [= RAB, C, F, FNA, G, K, L, W, WH, X, Z; = *Corallorhiza wisteriana* – S, orthographic variant]

Corallorhiza trifida Châtelain, Early Coralroot, Pale Coralroot. Boreal forests, bogs, peaty swamps. May. South to DC {specimen at NCU}, MD, WV, PA, NJ (Magrath & Freudenstein in FNA 2002, Kartesz 1999), and, allegedly, to GA (Small 1933). [= FNA, G, K, L, Z; > *C. trifida* var. *verna* (Nuttall) Fernald – C, F; = *Corallorhiza corallorhiza* – S]

***Cypripedium* Linnaeus 1753 (Lady's-slipper)**

A genus of about 40-50 species, north temperate in distribution. References: Sheviak (1994)=Z; Case et al. (1998); Wallace & Case (2000)=Y; Sheviak in FNA (2002a); Pridgeon et al. (1999c). Key to yellow-flowered species adapted from Sheviak (1994).

- 1 Plant scapose, with 2 basal leaves; pouch-like lip of flower with a longitudinal fissure, pink (rarely nearly white); [section *Acaulia*] *C. acaule*
- 1 Plant caulescent, with (2) 3-7 leaves alternate on the stem; pouch-like lip of flower with a rounded orifice, yellow or pink (rarely white).
 - 2 Pouch-like lip of flower pink and white (rarely all white); lateral petals and dorsal sepal white, not twisted, obtuse to acute; [section *Obtusipetala*] *C. reginae*
 - 2 Pouch-like lip of flower yellow or white; lateral petals and dorsal sepal brown, purplish brown, or yellow, slightly to strongly twisted, acuminate-attenuate; [section *Cypripedium*].
 - 3 Pouch-like lip of flower white, 1.5-2.5 cm long; orifice margin acute on the apical margin; [of calcareous barrens] *C. candidum*
 - 3 Pouch-like lip of flower bright yellow, pale yellow, or rarely white, (2.0-) 2.2-6.3 cm long (if pale yellow or white, then > 4 cm long); orifice margin rounded-ocutose on the apical margin; [of various habitats].
 - 4 Dorsal sepal 3.5-5.0 cm wide; pouch orifice 2.7-4.5 cm long; pouch-like lip 4.5-6.3 cm long, pale yellow or creamy white; plants robust, typically 5-8 dm tall *C. kentuckiense*
 - 4 Dorsal sepal 1.5-2.9 cm wide; pouch orifice 0.5-1.3 cm long; pouch-like lip (2.0-) 2.2-5.8 cm long, medium to rich yellow; plants not as robust, typically 2-5 (-6) dm tall.

- 5 Outer surface of uppermost sheathing bract glabrous or sparsely or inconspicuously pubescent when young; pouch-like lip 15-29 mm long; flower scent intense and sweet [*C. parviflorum* var. *makasin*]
- 5 Outer surface of uppermost sheathing bract densely and conspicuously silvery-pubescent when young, or rarely glabrescent; pouch-like lip 2.0-5.4 cm long; flower scent moderate to faint, rose-like or pungent-musty.
- 6 Pouch-like lip 2.2-3.4 cm long; sepals and lateral petals usually densely and minutely spotted with dark reddish brown or purple, thus appearing uniformly dark *C. parviflorum* var. *parviflorum*
- 6 Pouch-like lip (2.0-) 3.0-5.8 cm long; sepals and lateral petals unmarked (greenish-yellow), or more often streaked, blotched, striped or reticulately marked with dark reddish brown or purple (but generally not extensively blotched) *C. parviflorum* var. *pubescens*

Cypripedium acaule Aiton, Pink Lady's-slipper, Moccasin-flower. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): dry to mesic, acid forests and woodlands, often under pine or other conifers; common. April-July. Newfoundland west to n. Alberta, south to NC, SC, TN, n. IN, and MN. [= RAB, C, F, FNA, G, K, L, W, X; = *Fissipes acaulis* (Aiton) Small – S]

Cypripedium candidum Muhlenberg ex Willdenow, White Lady's-slipper. Mt (VA): calcareous barrens; rare. NY and NJ west to ND, south to w. VA and MO. [= C, F, FNA, G, K, L, X]

Cypripedium kentuckiense C.F. Reed, Kentucky Yellow Lady's-slipper. Cp (GA, VA): sandy ravine bottoms and springhead seeps along small streams; rare. First reported for our area by Weldy et al. (1996). *C. kentuckiense* C.F. Reed is similar to *C. parviflorum* var. *pubescens* and, in addition to the site discovered in e. VA, reaches e. TN (Franklin and Scott counties, Cumberland Plateau) and e. KY. Case et al. (1998) studied isozymes of *C. kentuckiense* and related *Cypripedium* spp.; the recognition of *C. kentuckiense* as a species was supported. [= C, FNA, K, Y, Z; often included in a broad concept of *C. calceolus*, *C. pubescens*, or *C. calceolus* var. *pubescens* by most earlier authors]

Cypripedium parviflorum Salisbury var. *parviflorum*, Small Yellow Lady's-slipper. Mt (GA, NC, VA): mesic forests, seepy forests over amphibolite, other habitats; rare. April-June. Rather widespread in North America, south in the east to NC and GA. The exact range, abundance, and habitats of this variety in our area are obscure, because of confusion with the more northern var. *makasin* (Farwell) Sheviak and small-flowered forms of var. *pubescens*. See Sheviak (1994) for a discussion of why North American plants of yellow lady's-slippers are recognized as a species distinct from the European *C. calceolus* Linnaeus. [= FNA, Y, Z; < *C. calceolus* Linnaeus var. *pubescens* – RAB, G, X, in part; = *C. parviflorum* – K, S; = *C. calceolus* var. *parviflorum* (Salisbury) Fernald – C, F, L, W]

Cypripedium parviflorum Salisbury var. *pubescens* (Willdenow) Knight, Large Yellow Lady's-slipper, Whippoorwill Shoes. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (VA): rich mesic forests; uncommon (rare in SC). April-June. Widespread in e. North America. [= FNA, Y, Z; < *C. calceolus* Linnaeus var. *pubescens* (Willdenow) Correll – RAB, G, X (also see *C. parviflorum* var. *parviflorum*); = *C. pubescens* Willdenow – K, S; = *C. calceolus* var. *pubescens* (Willdenow) Correll – C, F, L, W]

Cypripedium reginae Walter, Showy Lady's-slipper, Queen Lady's-slipper. Mt (GA?, NC*, VA): over circumneutral to basic rocks, or (allegedly) in mossy wet forests under *Rhododendron*; rare. May-June. Widespread in ne. North America, south to NC (?), GA, TN, and AR. The native occurrence of this species in NC is questionable; the only definite specimen from the state is from an implausible habitat for the species (highly acid humus under rhododendron). [= RAB, C, F, FNA, G, K, L, S, W, X]

Cypripedium parviflorum Salisbury var. *makasin* (Farwell) Sheviak ranges south to PA and NJ (Kartesz 1999). Var. *makasin* is the northern, small-flowered plant, characteristically of calcareous fens, often confused with var. *parviflorum*. It may reach our area. [= K, Y, Z] {synonymy incomplete}

Epidendrum Linnaeus 1759 (Green-fly Orchid)

A genus of about 1000 species, of tropical (and rarely subtropical) America. References: Hágsater in FNA (2002a); Pridgeon et al. (2005).

Epidendrum magnoliae Muhlenberg, Green-fly Orchid. Cp (FL, GA, NC, SC): epiphytic on limbs of trees, especially *Taxodium*, in blackwater river swamps, usually on relatively horizontal limbs mixed with *Pleopeltis polypodioides*, also rarely in crevices of Altamaha Grit outcrops; common (uncommon in GA, rare in NC and SC). July-October. The northernmost epiphytic orchid: se. NC south to c. peninsular FL, west to LA; also in ne. Mexico. It is locally rather common, but rarely seen as it occurs primarily in blackwater swamps, on upper limbs of *Taxodium*, *Nyssa*, and other trees, typically mixed with *Pleopeltis*. See Correll (1936) for additional discussion of this species at its northern limit. Hágsater (2000) indicates that *E. magnoliae* Muhlenberg has nomenclatural priority over *E. conopseum* R. Brown. [= FNA; = *E. conopseum* Aiton f. – RAB, L, WH, X; > *E. conopseum* var. *conopseum* – K; = *Amphiglottis conopsea* (Aiton f.) Small – S]

Epipactis Zinn 1757 (Helleborine)

A genus of about 25 species, of w. North America, Eurasia, and n. Africa (Brown & Argus in FNA 2002). References: Brown & Argus in FNA (2002a).

* ***Epipactis helleborine*** (Linnaeus) Crantz, Broad-leaved Helleborine. Mt (GA, NC, VA): forests; rare, native of Europe. June-September. This species has been collected a handful of times in various parts of the mountains, some of the colonies

dating back to the early 1960's; it has become common in ne. United States and se. Canada. [= C, F, FNA, K, L, X; = *E. latifolia* (Linnaeus) Allioni – G]

Eulophia R. Brown ex Lindley 1823

A genus of about 215 species, pantropical (Romero-González in FNA 2002). References: Romero-González in FNA (2002a). [also see *Pteroglossaspis*]

Eulophia alta (Linnaeus) Fawcett & Rendle, Wild Coco. Cp (GA): flatwoods, swamps; rare. S. GA south through the FL peninsula into the West Indies, Mexico, Central America, and South America. [= FNA, GW, K; = *Platypus altus* (Linnaeus) Small – S]

Galearis Rafinesque 1833 (Showy Orchis)

A genus of 3-6 species, of e. North America and e. Asia. References: Sheviak & Catling in FNA (2002a); Pridgeon et al. (1999b).

Galearis spectabilis (Linnaeus) Rafinesque, Showy Orchis. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): rich, deciduous forests, most typically over calcareous or mafic rocks; common (rare in SC). April-July. New Brunswick and Québec west to MN, south to GA and AR. [= FNA, K, L, W; = *Orchis spectabilis* Linnaeus – RAB, C, F, G, X; = *Galeorchis spectabilis* (Linnaeus) Rydberg – S]

Goodyera R. Brown 1813 (Rattlesnake Orchid)

A genus of about 55-100 species, widespread in distribution but primarily Northern Hemisphere. References: Kallunki in FNA (2002a); Pridgeon et al. (1999c).

- 1 Leaves blue-green, the upper surface variegated with white, the midrib broadly whitened (1-3 mm wide), the remainder of the network of white variegations narrow (< 0.5 mm wide), generally lacking any internal variation in color, the outlines of the variegations smooth; inflorescence cylindric, not secund or one-sided ***G. pubescens***
- 1 Leaves dark green, the upper surface variegated with pale green, the midrib only irregularly and narrowly pale green, most of the network of pale green variegations broad (0.5-1 mm wide), with a dark green center line (thus the variegations appearing double), the outlines of the variegations finely and irregularly toothed; inflorescence secund, primarily one-sided, or loosely spiraled.
 - 2 Lip narrowly saccate (th pouch much longer than deep), with an elongate recurved apex ***G. repens***
 - 2 Lip deeply concave (the pouch about as deep as long), with a short spreading or recurved apex [***G. tessellata***]

Goodyera pubescens (Willdenow) R. Brown, Downy Rattlesnake-orchid. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): dry to moist forests and woodlands; common (rare in FL). June-August. New Brunswick west to Ontario and MN, south to panhandle FL, MS, and AR. One of the commonest of orchids in much of its range. [= RAB, C, F, FNA, G, K, L, W, X; = *Peranium pubescens* (Willdenow) MacM. – S]

Goodyera repens (Linnaeus) R. Brown, Lesser Rattlesnake-orchid. Mt (NC, SC, VA): moist forests, usually under conifers and rhododendrons; uncommon (rare in SC). June-September. A circumboreal species of northern North America and Eurasia, this species reaching its southern limit in e. North America in NC and SC. [= FNA, K, L, W; > *Goodyera repens* var. *ophioides* Fernald – RAB, C, F, G, X; > *Peranium ophioides* (Fernald) Rydberg – S]

Goodyera tessellata Loddiges, Checkered Rattlesnake-plantain, south to MD, PA, and NJ (Kallunki in FNA 2002, Kartesz 1999). Probably an allopolyploid, derived from *G. oblongifolia* × *repens*. [= FNA, C, F, G, K, L, X]

Habenaria Willdenow 1805 (Longspur Orchid, Habenaria)

A genus of about 600 species, tropical and subtropical in the Old World and New World. References: Sheviak in FNA (2002a); Pridgeon et al. (1999b). [also see *Coeloglossum*, *Platanthera*]

- 1 Lip and lateral petals toothed ***H. odontopetala***
- 1 Lip or lateral petals divided into linear segments.
 - 2 Spur 4-10 cm long; [terrestrial, though in moist habitats] ***H. quinqueseta***
 - 2 Spur 0.4-1.4 cm long; [aquatic or semi-aquatic in marshes and swamps] ***H. repens***

Habenaria odontopetala Reichenbach f. Cp (FL): rich, moist hardwood hammocks; rare. Ne. FL south to s. FL; West Indies, Mexico and Central America. [= FNA, K; ? *H. floribunda* Lindley – WH]

Habenaria quinqueseta (Michaux) A. Eaton, Long-horned Habenaria, Michaux's Orchid. Cp (AL, FL, GA, LA, MS, SC): wet pine flatwoods, moist hardwood hammocks, Altamaha Grit outcrops, ditches; rare. August-October. SC south to s. FL, west to se. TX. [= FNA, K, WH; = *H. quinqueseta* var. *quinqueseta* – L; < *H. quinqueseta* – RAB, GW, S, X]

Habenaria repens Nuttall, Water-spider Orchid, Floating Orchid. Cp (AL, FL, GA, LA, MS, NC, SC, VA?): blackwater swamps, pools, banks of creeks and rivers; rare. April-November. NC south to FL and west to TX; West Indies, Mexico, Central America, and n. South America. Reported from se. VA. [= RAB, FNA, GW, K, L, S, WH, X]

Hexalectris Rafinesque 1825 (Crested Coralroot)

A genus of about 7 species, mycotrophic, of s. North America. References: Catling & Engel (1993)=Z; Catling (2004)=Y; Goldman, Coleman, Magrath, & Catling in FNA (2002a).

Hexalectris spicata (Walter) Barnhart var. *spicata*, Crested Coralroot, Brunetta. Pd, Mt (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): dry forests and woodlands, especially over mafic or calcareous rocks, such as diabase, gabbro, calcareous siltstone, and dolomite (though sometimes in distinctly acid situations); rare. April-August. Var. *spicata* is widespread in se. North America, ranging from MD, OH, and MO south to FL, TX, and Mexico. Var. *arizonica* (S. Watson) Catling & Engel, an autopolinating relative, is distributed from e. TX west to AZ, south into Mexico. The yellow and purple flowers borne on a brown stem present a very peculiar color combination. The genus is primarily Mexican. [= FNA, Y, Z; < *H. spicata* – RAB, C, F, G, K, L, S, W, WH, X]

Isotria Rafinesque 1808 (Whorled Pogonia, Five-leaves, Fiveleaf Orchid)

A genus of 2 species, of e. North America. Cameron & Chase (1999) indicate that *Isotria* should perhaps be included in a more broadly circumscribed *Pogonia* (as was often done prior to 1922). References: Mehrhoff & Homoya in FNA (2002a).

Identification notes: Sterile *Isotria* is sometimes confused with *Medeola*. *Medeola* has a wiry-textured stem, with floccose hairiness, at least towards the base. *Isotria* has a fleshier stem lacking hairs.

- 1 Sepals 12-30 mm long, greenish-brown; lip 10-15 mm long; pedicel of fruit (0-) 5-10 (-15) mm long; plant glaucous, the stem whitish-green..... **I. medeoloides**
- 1 Sepals 35-60 mm long, purple-brown; lip 20-25 mm long; pedicel of fruit (12-) 20-55 mm long; plant scarcely glaucous (if at all), the stem generally purplish..... **I. verticillata**

Isotria medeoloides (Pursh) Rafinesque, Small Whorled Pogonia, Little Five-leaves. Mt (GA, NC, SC), Pd (NC, VA), Cp (NC): moist forests, in the mountains and upper Piedmont usually with *Pinus strobus*; rare. May-June. Widespread (but very local) in ne. North America, from s. ME and MI south to c. and e. WV, w. VA, w. NC, e. TN, and n. GA. The reproductive biology of this species was studied by Vitt & Campbell (1997). Van Alstine et al. (1996) discuss the habitats of known occurrences in Virginia. [= RAB, C, F, FNA, G, K, L, W, X; = *I. affinis* (C.F. Austin) Rydberg – S; = *Pogonia affinis* C.F. Austin]

Isotria verticillata (Muhlenberg ex Willdenow) Rafinesque, Large Whorled Pogonia, Larger Five-leaves. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist to dry forests; common (uncommon in GA, SC, NC, rare in FL). April-July. ME and MI south to Panhandle FL and e. TX. [= RAB, C, F, FNA, G, K, L, S, W, X; = *Pogonia verticillata* (Muhlenberg ex Willdenow) Nuttall – WH]

Liparis L.C. Richard 1817 (Wide-lip Orchid, Twayblade)

A genus of about 250-350 species, cosmopolitan. References: Magrath in FNA (2002a).

- 1 Lip (8-) 10-12 mm long, pale purple; pedicels 11-18 mm long, equal to or longer than the capsule..... **L. liliifolia**
- 1 Lip 4-5.5 mm long, yellowish-green; pedicels 3-7 mm long, shorter than the capsule..... **L. loeselii**

Liparis liliifolia (Linnaeus) L.C. Richard ex Ker-Gawler, Large Twayblade, Mauve Sleekwort, Russet-witch, Brown Wide-lip Orchid. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (NC, VA): moist forests, floodplains; uncommon (rare in SC). May-July. VT and Ontario west to MN, south to GA and AR; also in China. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Liparis loeselii (Linnaeus) L.C. Richard, Fen Orchid, Loesel's Twayblade, Bog Twayblade, Yellow Wide-lip Orchid. Mt (NC, VA), Cp (NC, VA), Pd (VA): seepages at moderate to high elevations in the mountains, mucky bay swamps (dominated by *Persea palustris* and *Magnolia virginiana*) at about sea level on the Outer Banks, and other moist, seepy habitats, especially over mafic or calcareous rocks; rare. May-July. Nova Scotia and Québec west to Mackenzie and British Columbia, south to ne. NC, sw. NC, AL, AR, KS, NE, and WA. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Listera R. Brown 1813 (Twayblade)

A genus of about 25 species, boreal, north temperate, and south temperate (Magrath & Coleman in FNA 2002). References: Magrath & Coleman in FNA (2002a).

- 1 Lip usually cleft about one-third its length, the two lobes oblong, with rounded apices..... **L. smallii**

- 1 Lip usually cleft about two-thirds its length, the two lobes linear, with acute apices.
- 2 Lip 6-10 mm long, lacking prominent teeth near the base (but with 2 vertically-oriented lobes); pedicels and raceme axis glandular-puberulent; sepals and petals 1-2 mm long *L. australis*
- 2 Lip 3-5 mm long, with 2 prominent teeth near the base, these diverging horizontally; pedicels and raceme axis glabrous; sepals and petals 1-5-3 mm long..... *L. cordata* var. *cordata*

Listera australis Lindley, Southern Twayblade. Cp (FL, GA, NC, SC, VA), Pd (GA), Mt (NC): swamps, second terraces in floodplain forests, wet woods under *Rhododendron maximum*; uncommon (rare in GA, NC, and SC). February-July. Mainly a Southeastern Coastal Plain species, from NJ south to FL and west to e. TX, but also scattered inland of the Coastal Plain and north into VT and s. Canada. [= RAB, C, F, FNA, G, GW, K, L, W, WH, X; = *Ophrys australis* (Lindley) House – S]

Listera cordata (Linnaeus) R. Brown var. *cordata*, Heartleaf Twayblade, Lesser Twayblade. Mt (NC): habitat not known; rare (NC Watch List). June-July. A widespread circumboreal species of n. Eurasia and n. North America, south to NC (at least formerly, not seen in this century). Var. *cordata* is widespread in ne. United States and widespread in Canada; var. *nephrophylla* (Rydberg) Hultén is widespread in nw. North America. [= FNA, K, L; < *L. cordata* – RAB, C, F, G, W, X]

Listera smallii Wiegand, Appalachian Twayblade, Small's Twayblade, Kidneyleaf Twayblade. Mt (GA, NC, SC, VA): shaded swamps, wet slopes, nearly always beneath *Rhododendron maximum*; uncommon (rare in GA and SC). June-July. A Southern and Central Appalachian endemic: s. PA south to nw. SC and ne. GA. [= RAB, C, FNA, G, GW, K, L, W, X; = *Ophrys smallii* (Wiegand) House – S]

Listera convallarioides (Swartz) Nuttall was attributed to NC by Correll (1950); this record of this far-northern species is almost certainly an error. {not keyed}

Malaxis Solander ex Swartz 1788 (Adder's-mouth)fYucca

A genus of about 250-300 species, nearly cosmopolitan. References: Catling (1991)=Z; Catling & Magrath in FNA (2002a). Key adapted from Catling (1991).

- 1 Leaves 2-5; lip oriented upwards, erect, entire, obtuse to acuminate.....*M. spicata*
- 1 Leaf solitary; lip oriented downwards, deflexed, 3-lobed (the central lobe smaller than the 2 lateral lobes).
- 2 Lip pointed, acuminate, lacking lateral lobes..... [*M. brachypoda*]
- 2 Lip bifid, with 2 well-developed lateral lobes on either side of a smaller central lobe.
- 3 Pedicels 3-5 (-5.8) mm long (even in plants with inflorescences over 80 mm long); basal lobes of the lip prominent, 0.75-1.1 mm long, usually 1.5-2 (-2.5)× as long as the apical lateral lobes and > 0.6× as long as the length from the base to the tip of the mid-lobe; inflorescences loosely flowered above, the lower flowers withering slowly.....*M. bayardii*
- 3 Pedicels (4-) 5-10 (-13) mm long (and > 5 mm long in plants with inflorescences > 45 mm long); basal lobes of the lip not prominent, 0.4-1.1 mm long, mostly < 1.5× as long as the apical lateral lobes and < 0.6× as long as the length from the base to the tip of the mid-lobe; inflorescences densely flowered above, the lower flowers soon withering *M. unifolia*

Malaxis bayardii Fernald, Appalachian Adder's-mouth. Mt (NC, VA), Pd (NC, SC), Cp (SC, VA): dry, open, upland forests, shale barrens; rare. July-September. S. NY and se. MA south through CT, RI, NJ, PA, and VA to w. and c. NC, mostly in the mountains (but somewhat disjunct on the Coastal Plain of VA). See Catling (1991) for further discussion of the distinction of *M bayardii* from *M. unifolia*. [= F, FNA, K, Z; < *M. unifolia* – RAB, C, G, GW, L, S, W, X]

Malaxis spicata Swartz, Florida Adder's-mouth. Cp (FL, GA, NC, SC, VA): maritime swamp forests, calcareous but mucky swamps in the outer Coastal Plain, spring-fed swamps, wet hammocks; uncommon (rare north of FL). July-October. Se. VA south to FL; n. West Indies. [= RAB, C, FNA, G, GW, K, L, S, WH, X; ? *M. floridana* (Chapman) Kuntze – F]

Malaxis unifolia Michaux, Green Adder's-mouth. Cp (FL, GA, NC, SC, VA), Mt, Pd (GA, NC, SC, VA): bogs, moist forested slopes, in the Sandhills in longleaf-oak-hickory forests; uncommon (rare in Piedmont and Coastal Plain, rare in FL). June-August. Newfoundland and FL west to MN, IA, MO, e. OK, and e. TX; also in Mexico, Cuba, the West Indies, and Central America. [= F, FNA, K, Z; < *M. unifolia* – RAB, C, G, GW, L, S, W, WH, X (also see *M. bayardii*)]

Malaxis brachypoda (A. Gray) Fernald, White Malaxis, ranges as far south as sc. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999), in moist forests and bogs; it is additionally reported by F to range south to the Mountains of TN, the documentation unknown. [= F, K; = *M. monophyllos* (Linnaeus) Swartz var. *brachypoda* (A. Gray) Morris & Eames – C, FNA, G, L, X; = *M. monophyllos* (Linnaeus) Swartz ssp. *brachypoda* (A. Gray) Á. & D. Löve]

Mesadenus Schlechter 1920

A genus of 7 species, of tropical and subtropical s. North America, West Indies, Central America, and South America. References: Ackerman in FNA (2002a).

Mesadenus lucayanus (Britton) Schlechter. Cp (FL): shell middens, dry calcareous hammocks; rare. Late December-March. Ne. FL (Duval County) south to s. FL; West Indies; e. Mexico and n. Central America. [=FNA, S; < *Spiranthes polyantha* Reichenbach f. – L, WH] {add to genus key}

Platanthera L.C. Richard 1817 (Fringed Orchid, Fringeless Orchid)

A genus of about 200 species, largely of the temperate northern hemisphere, extending south into tropical Central America and tropical se. Asia. The recognition of *Gymnadeniopsis* as separate from *Platanthera* is uncertain at this time; originally named by Rydberg, its recognition was acknowledged as possibly warranted by Sheviak in FNA (2002a) and embraced by Brown (2006a). Three of our species would belong to *Gymnadeniopsis*: *P. clavellata*, *P. integra*, and *P. nivea*. References: Sheviak in FNA (2002a); Reddoch & Reddoch (1993); Pridgeon et al. (1999b).

Identification Notes: hybrids are frequent and are not keyed; they are generally intermediate in characters and are found in mixed populations of the two parents. Further information follows the species accounts.

- 1 Lip entire, finely toothed, or eroded (neither fringed nor deeply divided into 3 lobes).
 - 2 Leaves basal, 1 or 2, orbicular, (5-) 8-25 cm wide, prostrate on the ground, the stem naked or with a few bladeless bracts.
 - 3 Stem bractless..... [*P. hookeri*]
 - 3 Stem with bracts.
 - 4 Corolla spur 28-47 mm long; hemipollinarium 4.6-6.8 mm long; seeds (0.72-) 0.76-0.97 mm long..... [*P. macrophylla*]
 - 4 Corolla spur 14-28 mm long; hemipollinarium 3.0-4.8 mm long; seeds 0.54-0.72 (-0.79)..... *P. orbiculata*
 - 2 Leaves cauline, 1-10 or more, mostly lanceolate, 1-5 cm wide, ascending, the stem with at least 1 (usually several) bladed leaves.
 - 5 Lip 11-15 mm long; spur mostly 40-50 mm long..... *P. integrilabia*
 - 5 Lip 2-8 mm long; spur 4-23 mm long.
 - 6 Flowers green, greenish-white, yellowish-green, yellowish-white, or dull-white.
 - 7 Larger stem leaves usually 1, rarely 2, near the middle of the stem; raceme 2-9 cm long, 2-3.5 cm in diameter; lip without a tubercle on the upper surface near the base, also lacking lateral auricles near the base..... *P. clavellata*
 - 7 Larger stem leaves usually 2 (-5), near the middle of the stem or towards its base; raceme 5-20 cm long, 1.2-2 cm in diameter; lip with a tubercle on the upper surface near the base, also usually with 2 lateral auricles.
 - 8 Most bracts of the inflorescence shorter than the flowers they subtend (the lowermost few exceeding the flowers); flowers sparsely distributed; lip orbicular, 1-1.5× as long as broad, yellowish-green..... *P. flava* var. *flava*
 - 8 Most bracts of the inflorescence exceeding the flowers they subtend (the uppermost few sometimes shorter than the flowers); flowers densely distributed; lip oblong, 2-3× as long as broad, green..... *P. flava* var. *herbiola*
 - 6 Flowers golden-yellow or bright-white.
 - 9 Flowers golden-yellow; spur 4-8 mm long; lip minutely crenulate, directed downward..... *P. integra*
 - 9 Flowers bright-white; spur 11-23 mm long; lip entire, directed upward..... *P. nivea*
- 1 Lip either fringed, deeply divided into 3 lobes, or both.
 - 10 Lip not deeply divided into 3 lobes, deeply fringed; flowers white, yellow, orange.
 - 11 Flowers white; spur 15-50 mm long.
 - 12 Spur 15-26 mm long, ca. 1× as long as the ovary; lip descending and thence curved back towards the stem, narrowed at its base to a very short isthmus (between the base and the fringed portion); lip fringing short and relatively coarse; [of Newfoundland west to MI and IL, south to GA]..... *P. blephariglottis*
 - 12 Spur 30-50 mm long, ca. 2× as long as the ovary; lip projected forward; lip narrowed to an extended isthmus; lip fringing elongate and delicate; [of e. NC south to c. peninsular FL, west to e. TX]..... *P. conspiciua*
 - 11 Flowers yellow to orange; spur 5-33 mm long.
 - 13 Spur 20-33 mm long, exceeding the 12-27 mm long ovary; undivided portion of lip 8-12 mm long..... *P. ciliaris*
 - 13 Spur 4-17 mm long, equal to or shorter than the ovary; undivided portion of lip 4-6 mm long.
 - 14 Spur 8-17 mm long, about as long as the 10-19 mm long ovary; spur orifice circular..... *P. chapmanii*
 - 14 Spur 4-10 mm long, shorter than the 7-13 mm long ovary; spur orifice keyhole-shaped or triangular..... *P. cristata*
 - 10 Lip deeply divided into 3 lobes, the lobes deeply fringed, shallowly fringed, eroded, or entire; flowers purple or greenish-white or yellowish-white.
 - 15 Lateral lobes of lip deeply fringed (nearly or entirely to the point of junction with the central lobe of the lip); flowers greenish-white or yellowish-white.
 - 16 Perianth greenish-white; lateral petals linear-spatulate, < 2 mm wide, blunt, entire to inconspicuously crenulate; lateral sepals deflexed..... *P. lacera*
 - 16 Perianth white or cream; lateral petals cuneate to broadly obovate, 4-12 mm wide, toothed; lateral sepals divergent..... *P. leucophaea*
 - 15 Lateral lobes of lip entire, eroded, or shallowly fringed (generally no > 1/2 way from the apex to the point of junction with the central lobe of the lip); flowers purple (or rarely white in albino forms).
 - 17 Lobes of lip eroded or entire, few (if any) of the segments > 1 mm long..... *P. peramoena*
 - 17 Lobes of lip shallowly fringed, most or all of the segments > 1 mm long.
 - 18 Lobes of lip fringed from 1/3 to 1/2 of the way to the base of the lobes; opening to nectary widely rounded (the pollen sacs spread widely apart); spur 20-26 mm long..... *P. grandiflora*
 - 18 Lobes of the lip fringed < 1/3 of the way to the base of the lobes; opening to nectary dumbbell-shaped (the pollen sacs close together); spur 12-20 mm long..... *P. psychodes*

Platanthera blephariglottis (Willdenow) Lindley, Small White Fringed Orchid. Cp (GA, NC, SC, VA): seepages, sandhill-pocosin ecotones; uncommon (GA Special Concern). July-September. Newfoundland west to MI and IL, south to GA.

Following Brown (2006b), it seems best to recognize the two white-fringed orchids as separate species; they are morphologically distinctive, and where they co-occur their blooming time is offset. [= *Platanthera blephariglottis* (Willdenow) Lindley var. *blephariglottis* – FNA, K, L; < *Habenaria blephariglottis* (Willdenow) Hooker var. *blephariglottis* – RAB, X; < *Habenaria blephariglottis* var. *blephariglottis* – F (possibly misapplied); < *Habenaria blephariglottis* – GW; *Blephariglottis blephariglottis* (Willdenow) Rydberg – S (possibly misapplied); < *Platanthera blephariglottis* (Willdenow) Lindley – W]

Platanthera chapmanii (Small) Luer, Chapman's Orange-fringed Orchid. Cp (FL, GA): pine savannas; rare. S. GA and n. FL; e. TX. Previously generally confused with the hybrid between *P. ciliaris* × *cristata* (*P.* × *chapmanii*). See Folsom (1984) and Brown (2004). [= FNA, K, WH; = *Blephariglottis chapmanii* Small – S] {synonymy incomplete}

Platanthera ciliaris (Linnaeus) Lindley, Yellow Fringed Orchid. Cp (FL, GA, NC, SC, VA), Mt, Pd (GA, NC, SC, VA): savannas, moist roadbanks, meadows, pastures; common (rare in Piedmont, uncommon in FL). July-September. NH, MI, IL, MO, and OK south to c. peninsular FL and TX. *P. ciliaris* is probably our most common and least habitat-specific *Platanthera*. [= FNA, K, L, W, WH; = *Habenaria ciliaris* (Linnaeus) R. Brown – RAB, C, F, G, GW, X; = *Blephariglottis ciliaris* (Linnaeus) Rydberg – S]

Platanthera clavellata (Michaux) Luer, Small Green Wood Orchid. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): seepages, bogs, swamps, other wet places; common (uncommon in Piedmont, rare in FL). June-September. Newfoundland and ND south to Panhandle FL and TX. [= FNA, K, L, W, WH; = *Habenaria clavellata* (Michaux) Sprengel – C, G, GW, X; > *Habenaria clavellata* var. *wrightii* Olive – RAB; > *Habenaria clavellata* (Michaux) Sprengel var. *clavellata* – RAB, F; = *Gymnadeniopsis clavellata* (Michaux) Rydberg – S]

Platanthera conspicua (Nash) P.M. Brown, Large White Fringed Orchid. Cp (FL, GA, NC, SC): savannas, seepages, sandhill-pocosin ecotones; uncommon (but locally abundant). July-September. NC south to c. peninsular FL, west to TX. Brown (2006b) and Sheviak in FNA (2002a) clarify the taxonomy of this complex; previous studies (such as Hardin 1961) used different characters, and interpreted the white-fringed orchid taxa differently. [= *Platanthera blephariglottis* (Willdenow) Lindley var. *conspicua* (Nash) Luer – FNA, K, L, WH; < *Habenaria blephariglottis* (Willdenow) Hooker var. *blephariglottis* – RAB, X; *Habenaria blephariglottis* var. *conspicua* (Nash) Ames – C, F; < *Habenaria blephariglottis* – GW; *Blephariglottis conspicua* (Nash) Small – S (also see *Platanthera integrilabia*); *Blephariglottis blephariglottis* (Willdenow) Rydberg – S (possibly misapplied)]

Platanthera cristata (Michaux) Lindley, Crested Fringed Orchid, Golden Fringed Orchid. Cp (FL, GA, NC, SC, VA), Mt (NC, SC, VA): savannas, bogs, moist roadsides; uncommon (rare in Mountains). June-September. *P. cristata* is more limited to the Coastal Plain than the related *P. ciliaris*, ranging from s. MA south to FL and west to TX, and also inland in KY, TN, AR, SC, and NC. [= FNA, K, L, W, WH; = *Habenaria cristata* (Michaux) R. Brown – RAB, C, F, G, GW, X; = *Blephariglottis cristata* (Michaux) Rafinesque – S]

Platanthera flava (Linnaeus) Lindley var. *flava*, Southern Rein Orchid, Southern Gypsy-spike. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): shaded wet places, such as swampy forests; uncommon (rare in Piedmont, rare in VA). March-September. VA, IN, IL, MO, and OK, south to c. peninsular FL and TX; remarkably disjunct in s. Nova Scotia, where it occurs associated with other disjuncts from the Southeastern Coastal Plain. See Homoya (1993) for additional discussion of the two varieties of *P. flava*. [= FNA, K, L; = *Habenaria flava* (Linnaeus) R. Brown var. *flava* – RAB, C, F, G, X; < *Habenaria flava* – GW; > *Perularia scutellata* (Nuttall) Small – S; > *Perularia bidentata* (Elliott) Small – S]

Platanthera flava (Linnaeus) Lindley var. *herbiola* (R. Brown) Luer, Tubercled Rein Orchid, Northern Gypsy-spike. Mt (GA, NC, VA), Pd (NC): bogs, seepages; rare. May-September. Nova Scotia, Québec, and MN south to NC, GA, TN, and MO. See Homoya (1993) for additional discussion of the two varieties of *P. flava*; he suggests that specific status may be warranted. [= FNA, K, L, W; = *Habenaria flava* (Linnaeus) R. Brown var. *herbiola* (R. Brown) Ames & Correll – RAB, C, F, G, X; = *Perularia flava* (Linnaeus) Farwell – S, apparently misapplied]

Platanthera grandiflora (Bigelow) Lindley, Large Purple Fringed Orchid, Plume-royal. Mt (GA, NC, VA): bogs, seepages, moist places at high elevations; rare. June-August. Widespread in ne. North America, south in the mountains to NC and n. GA. Blooming 3-4 weeks earlier than *P. psycodes* when they grow in proximity. [= FNA, K, L, W; = *Habenaria psycodes* (Linnaeus) Sprengel var. *grandiflora* (Bigelow) A. Gray – RAB, C, G, X; = *Habenaria fimbriata* (Aiton) R. Brown – F; = *Blephariglottis grandiflora* (Bigelow) Rydberg – S]

Platanthera integra (Nuttall) A. Gray ex Beck, Golden Fringeless Orchid, Yellow Fringeless Orchid. Cp (FL, GA, NC, SC), Mt, Pd (NC): savannas in the Coastal Plain, bogs in the Mountains and Piedmont; rare. July-September. Essentially endemic to the Southeastern Coastal Plain, ranging from s. NJ south to FL and west to se. TX, with disjunct occurrences in TN (Eastern Highland Rim) and in bogs at low elevations of the Blue Ridge of NC. It is apparently now extirpated in the Mountains and Piedmont of NC. [= FNA, K, L, WH; = *Habenaria integra* (Nuttall) Sprengel – RAB, C, F, G, GW, X; = *Gymnadeniopsis integra* (Nuttall) Rydberg – S]

Platanthera integrilabia (Correll) Luer, Monkey-face Orchid, White Fringeless Orchid. Mt (GA, NC, SC, VA?), Pd (GA): bogs, red maple-gum swamps, seeps and streambanks; rare. July-September. Endemic to KY, e. TN, sw. VA (Lee County, documentation uncertain), w. NC, nw. SC, n. GA, n. AL, and n. MS, primarily in the Cumberland Plateau. See Zettler, Ahuja, & McInnis (1996) for a discussion of pollination. [= FNA, K, L, W; = *Habenaria blephariglottis* (Willdenow) Hooker var. *integrilabia* Correll – RAB, F, X; = *Habenaria correlliana* Cronquist – C; ? *Habenaria blephariglottis* var. *holopetala* (Lindley) A. Gray]

Platanthera lacera (Michaux) G. Don, Green Fringed Orchid, Ragged Fringed Orchid, Ragged Orchid. Mt, Pd, Cp (GA, NC, SC, VA): swamps, bogs, seepages; uncommon, rare in Piedmont and Coastal Plain (rare in SC). June-August. Widespread in ne. North America, south to SC, GA, AL, AR, and OK. Var. *terrae-novae* (Fernald) Luer is not distinct, and is based on hybrid swarms involving *P. lacera* and *P. psycodes* (Catling 1997). [= FNA, K, W; = *Habenaria lacera* (Michaux) R. Brown – RAB, C, G, GW, X; > *Habenaria lacera* var. *lacera* – F; = *Blephariglottis lacera* (Michaux) Farwell – S; > *Platanthera lacera* var. *lacera* – L]

Platanthera leucophaea (Nuttall) Lindley, Prairie Fringed Orchid. Mt (VA): damp calcareous meadows; rare. May-July. ME west to NE, south to w. VA, nw. PA, c. OH, c. IN, IL, MO, and OK. [= FNA, K, W; = *Habenaria leucophaea* (Nuttall) A. Gray var. *leucophaea* – C; = *Habenaria leucophaea* (Nuttall) A. Gray – G, X]

Platanthera nivea (Nuttall) Luer, Snowy Orchid, Bog-spike. Cp (GA, NC, SC): wet savannas; uncommon (rare north of FL). May-September. Essentially a Southeastern Coastal plain endemic, *P. nivea* ranges from s. NJ south to FL and west to TX, disjunct in Coffee County, TN (Eastern Highland Rim). This species is even more irregular than most *Platanthera* in its flowering, whole populations sometimes not flowering for a number of years. The flowers are so white as to seem illuminated from within. This species was once locally abundant in the outer Coastal Plain of the Carolinas and further south; Correll (1950) describes "large colonies of this species which form a blanket of white over the landscape." Also see the picture in B.W. Wells'

Natural Gardens of North Carolina. [= FNA, K, L; = *Habenaria nivea* (Nuttall) Sprengel – RAB, C, F, G, GW, WH, X; = *Gymnadeniopsis nivea* (Nuttall) Rydberg – S]

Platanthera orbiculata (Pursh) Lindley, Large Round-leaved Orchid, Dinner-plate Orchid. Mt, Pd (NC, VA): moist hardwood forests, especially over amphibolite; uncommon (rare in Piedmont). June-September. Newfoundland and Labrador west to AK, south to PA (and in the mountains to NC and TN), OH, IN, MN, SD, and OR. Reddoch & Reddoch (1993) have shown that *P. orbiculata* differs from *P. macrophylla* at the species level; see note below for further discussion. Pollination is by night-flying moths, likely noctuids. [= FNA; = *Habenaria orbiculata* (Pursh) Lindley – RAB; = *Habenaria orbiculata* var. *orbiculata* – C, F; < *Habenaria orbiculata* – G, W, X (also see *P. macrophylla*); = *Platanthera orbiculata* var. *orbiculata* – K, L; = *Lysias orbiculata* (Pursh) Rydberg – S]

Platanthera peramoena (A. Gray) A. Gray, Purple Fringeless Orchid, Purple Spire Orchid, Pride-of-the-peak. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): bogs, seepages, moist forests; rare. June-October. NJ, s. PA, OH, c. IL, and se. MO south to nw. SC, n. GA, n. AL, c. MS, and c. AR. See Spooner & Shelly (1983) for a review of information about this species. [= FNA, K, L, W; = *Habenaria peramoena* A. Gray – RAB, C, F, G, GW, X; = *Blephariglottis peramoena* (A. Gray) Rydberg – S]

Platanthera psychodes (Linnaeus) Lindley, Small Purple Fringed Orchid, Butterfly Orchid. Mt (GA, NC, SC, VA): northern hardwood forests, other moist forests, seepages, bogs; uncommon (rare in GA). June-August. Widespread in ne. North America, south in the mountains to n. GA. [= FNA, K, L, W; = *Habenaria psychodes* (Linnaeus) Sprengel var. *psychodes* – RAB, C, G, X; = *Habenaria psychodes* – F, GW; = *Blephariglottis psychodes* (Linnaeus) Rydberg – S]

Platanthera aquilonis Sheviak, south to NJ and PA. [= FNA; *P. hyperborea* (Linnaeus) Lindley var. *hyperborea* – K, misapplied; *Habenaria hyperborea* (Linnaeus) R. Brown var. *hyperborea*, misapplied] {not keyed; synonymy incomplete}

Platanthera hookeri (Torrey & A. Gray) Lindley, Hooker's Orchid, ranges south to s. PA, in rich moist forests. [= FNA, K, L; = *Habenaria hookeri* Torrey – C, F, G, X]

Platanthera huronensis (Nuttall) Lindley, south to NJ (Sheviak 2002, Kartesz 1999) and PA (Kartesz 1999). [= FNA, K; = *Habenaria hyperborea* (Linnaeus) R. Brown var. *huronensis* (Nuttall) Farwell] {not keyed; synonymy incomplete}

Platanthera macrophylla (Goldie) P.M. Brown is apparently reported from NC and VA by Luer (1975). I have seen no verification of this distribution, nor is it validated by Reddoch & Reddoch (1993) or Sheviak in FNA (2002). *P. macrophylla* does range south to sw. PA and might be expected in montane VA. It generally occurs in coniferous swamps, from Nova Scotia west to n. MI, south to sw. PA and MD (Kartesz 1999). [= FNA, K; = *P. orbiculata* var. *macrophylla* (Goldie) Luer – L; = *Habenaria orbiculata* (Pursh) Torrey var. *macrophylla* (Goldie) B. Boivin – C, F; < *Habenaria orbiculata* – G, X (also see *P. macrophylla*)]

The following hybrids are known from our area (others should be expected):

Platanthera* × *andrewsii (M. White) Luer [*P. lacera* × *psychodes*]. This hybrid is known from several locations in the Mountains. It is distinguished by characteristics intermediate between the two parents, especially the purple to pale lavender flowers, the central lobe of the lip long and narrow and deeply fringed. [= FNA]

Platanthera* × *bicolor (Rafinesque) Luer [*P. blephariglottis* × *ciliaris*]. This hybrid is rather common in the Coastal Plain, and can sometimes be found by the hundreds where both parents are abundant. The flowers from a distance appear a pale, creamy orange; when observed more closely, they prove to be bicolored, the broader portions pale orange, the fringed portions white. [= FNA]

Platanthera* × *canbyi (Ames) Luer [*P. blephariglottis* × *cristata*]. This hybrid is known from a few locations in the Coastal Plain. It is intermediate between the parents. [= FNA]

Platanthera* × *channellii Folsom [*P. ciliaris* × *cristata*]. This hybrid is known from several sites in the Coastal Plain (Charleston County, SC), Piedmont (Iredell County, NC), and Mountains (Henderson County, NC). It can be distinguished by its intermediate morphology, especially the spur 11-15 mm long. Folsom (1984) and Brown (2004) discuss the closely related *P. chapmanii* (Small) Luer, ranging from se. GA to panhandle FL, and in e. TX, which they recognize as a species, based on its occurrence in populations independent of its parents, pollination biology, and subtle morphologic distinction from *P. ×channellii*. [= FNA; *P. ×chapmanii* – misapplied]

***Platythelys* Garay (Jug Orchid)**

A genus of about 9 species, of the New World tropics and subtropics. References: Ackerman in FNA (2002a).

Platythelys querceticola (Lindley) Garay, Jug Orchid. Cp (FL, LA, MS): wet hammocks and swamps; rare. Late July-September. N. FL south to s. FL, west to AL(?), MS, and LA; Mexico; West Indies; Central America; South America. [= FNA, K; = *Erythrodes querceticola* (Lindley) Ames – L, X; = *Physurus querceticola* Lindley – S; ? *P. latifolia* (Linnaeus) Garay & Ormerod – WH] {add to genus key}

***Pogonia* Antoine Laurent de Jussieu 1789 (Rose Pogonia, Pogonia)**

A genus of 3 species, of temperate e. North America and e. Asia. Cameron & Chase (1999) indicate that molecular analyses indicate that there may be merit in the traditional broad circumscription of *Pogonia* to include *Isotria* and N. American taxa of *Cleistis*. References: Catling & Sheviak in FNA (2002a). [also see *Cleistis*, *Isotria*]

Pogonia ophioglossoides (Linnaeus) Ker-Gawler, Rose Pogonia, Snakemouth, Beardflower, Ettercap, Addermouth. Cp (FL, GA, NC, SC, VA), Mt (NC, SC, VA), Pd (GA, NC, SC, VA): savannas, bogs, especially in open peaty or gravelly situations; uncommon (rare in Piedmont and Mountains) (rare in VA). March-June. Newfoundland and Manitoba south to s. FL and TX. [= RAB, C, FNA, G, GW, K, L, S, W, WH, X; > *P. ophioglossoides* var. *ophioglossoides* – F]

Ponthieva R. Brown 1813 (Shadow Witch)

A genus of about 30-53 species, of tropical and warm temperate America. References: Ackerman in FNA (2002a); Pridgeon et al. (1999b).

Ponthieva racemosa (Walter) C. Mohr, Shadow Witch. Cp (FL, GA, NC, SC, VA): bottomlands, floodplains, moist ravines, nearly always over calcareous rock ("marl" or coquina limestone); uncommon (rare north of FL). September-October. Se. VA south to FL and west to se. TX; disjunct in the Eastern Highland Rim, TN, and south into Central and South America. The basal rosette of leaves, white (suffused with green) flowers in fall, and habitat are distinctive. [= RAB, C, F, FNA, G, GW, K, S, WH, X; = *P. racemosa* var. *racemosa* – L]

Pteroglossaspis Reichenbach filius 1878 (Wild Coco)

A genus of 7-10 species, of s. North America, Cuba, Colombia, and tropical Africa (Romero-González in FNA 2002). References: Romero-González in FNA (2002a).

Identification notes: The long (to 7 dm), plicate leaves are distinctive among our orchids. Small individuals can be mistaken for *Calopogon* when not in bloom. *Pteroglossaspis* differs, however, in having the stem covered from node to node by a succession of sheaths (vs. the sheaths much shorter) and in having the leaves 2-3 on a separate shoot emerging from the corm before the bloom-stalk (vs. leaf 1, on the bloom-stalk).

Pteroglossaspis ecristata (Fernald) Rolfe, Spiked Medusa, Smooth-lipped Eulophia. Cp (FL, GA, NC, SC): mesic pinelands with blackjack oak, other sandhills and dry-mesic to mesic longleaf pinelands; rare. June-September; July-November. Se. NC south to FL, west to LA; West Indies (Cuba). One of the rarest orchids in our region. [= FNA, K, WH; = *Eulophia ecristata* (Fernald) Ames – RAB, L, X; = *Triorchos ecristatus* (Fernald) Small – S]

Sacoila Rafinesque 1838

A genus of ca. 10 species, of the tropics and subtropics. References: Brown & Catling in FNA (2002).

Sacoila lanceolata (Aublet) Garay var. *lanceolata*. Cp (FL): pine flatwoods, road shoulders; rare. April-June. Ne. and Panhandle FL south to s. FL; West Indies, Mexico, Central America, South America. [= FNA, WH; = *Stenorrhynchos lanceolata* (Aublet) L.C. Richard var. *lanceolata* – K; = *Spiranthes lanceolata* (Aublet) Léon var. *lanceolata* – L; < *Stenorrhynchos orchioides* (Swartz) L.C. Richard – S] {add to genus key}

Spiranthes L.C. Richard 1817 (Ladies'-tresses, Pearl-twist, Spiral Orchid)

A genus of about 30-40 species, mainly north temperate, but with species scattered in other areas. The *Spiranthes* flora of our region is still rather poorly understood, and the treatment here will undoubtedly change further. References: Sheviak & Brown in FNA (2002a); Luer (1975); Sheviak (1991); Pridgeon et al. (1999c). Key adapted largely from Sheviak & Brown in FNA (2002a). [also see *Sacoila*]

Identification notes: Flowering plants are necessary for identification of the species.

- 1 Rachis of inflorescence with all hairs **not** glandular, tapering to a pointed tip; [flowering March-September]**S. vernalis**
- 1 Rachis of inflorescence **either** glabrous **or** with some or all hairs gland-tipped, capitate or clavate.
 - 2 Lip bright yellow or orange-yellow, with greenish veins; sepals and petals pure white; [flowering May-July].....**S. lucida**
 - 2 Lip either white, or lip yellowish and lacking greenish veins; sepals and petals creamy, ivory, yellow, or greenish; [collectively flowering February-December].
 - 3 Lip with conspicuous, terminally widened, greenish (rarely yellowish) diverging veins extending nearly to the tip; [flowering March-July].
 - 4 Flowers white, with green veins; sepals appressed; flowers 6-9 mm long**S. praecox**
 - 4 Flowers creamy green, with darker green veins; flowers 10-17 mm long.....**S. sylvatica**
 - 3 Lip lacking conspicuous, terminally widened, greenish diverging veins (veins not terminally widened); [collectively flowering February-December].
 - 5 Rachis glabrous; flowers gaping from near middle, the tubular portion < 3 mm long; lip pure white; [flowering June-September]**S. tuberosa**
 - 5 Rachis pubescent or glabrous; flowers gaping only from beyond the middle, the tubular portion > 3 mm long; lip white, creamy, yellow, or centrally green; [collectively flowering February-December].
 - 6 Inflorescence with 3 or 4 flowers per cycle of spiral, the spiral usually tight and obscure, but then with 3 or 4 secondary ranks of flowers evident; [collectively flowering August-December] **Key A**
 - 6 Inflorescence with 5 or more flowers per cycle of spiral, the spiral usually open and obvious; [collectively flowering February-December] **Key B**

- 1 Petals ca. 6 mm long; lower portion of stem with recurved-spreading leaves
 - 2 Rostellum and viscidium absent; sepals 3.5-5 mm long *S. ovalis* var. *erostellata*
 - 2 Rostellum and viscidium present; sepals 4-6.1 mm long *S. ovalis* var. *ovalis*
- 1 Petals 7.5 mm long or longer; leaves wholly basal, or lower portion of stem with recurved-spreading blades, or leaves absent at flowering.
 - 3 Lip only slightly or not at all differentiated from the petals; buds often failing to open (but setting seed through agamospermy); column normal, or abnormal or aborted; leaves usually absent at flowering *S. cernua*
 - 3 Lip clearly differentiated from petals; buds opening into normal flowers; column normal; leaves present or absent at flowering.
 - 4 Basal callosity of the lip relatively short and conic, a wide as high, and usually < 1 mm long; lateral sepals free and spreading, often over the top of the flower; leaves absent at flowering; [of dry calcareous barrens of the Ridge and Valley and westward, in the Ridge and Valley of sw. VA and nw. GA, and westward] *S. magnicamporum*
 - 4 Basal callosity of the lip 1-2 mm long; lateral sepals more or less appressed (very rarely spreading over the top of the flower); leaves present at flowering; [of various dry to wet sites, collectively widespread in our area].
 - 5 Upper margin of the lateral sepals obviously separated from the adjacent margin of the dorsal sepal, the separation abrupt at the base (commonly by about 1 mm); lip strongly curving from the claw (the resulting angle 20-60 degrees), cuneate at the base; perianth creamy, yellowish, or greenish white; [of upland, dry to mesic sites] *S. ochroleuca*
 - 5 Upper margin of the lateral sepals touching (or nearly so) the adjacent margin of the dorsal sepal, or only gradually separated with distance from the base; lip not strongly curving from the claw (angle < 30 degrees), cordate to truncate at the base; perianth white to creamy or ivory, the center of the lip ivory to pale yellowish or rarely greenish; [primarily of wet sites, such as bogs, fens, marshes, bottomland swamps].
 - 6 Plants to about 50 cm tall, not colonial; leaves comparatively slender, flaccid-membranaceous with thickened midrib, the petioles of the basal leaves < 6 mm wide; leaves wholly basal or the lower sheaths with ascending-spreading blades; perianth usually 8-11 mm long; lip membranaceous to fleshy, < 7 mm long; [widespread in our area] *S. cernua*
 - 6 Plants to over 100 cm tall, forming clonal colonies via stolons; leaves broad, stiffly aerenchymatous-thickened, the petioles of basal leaves 7 mm or more wide; leaves up the stem, with spreading recurved blades on the lower cauline sheaths, frequently also on the upper, with leaves extending to the inflorescence; perianth 10-15 mm long (sometimes smaller in depauperate plants); lip fleshy, usually over 7 mm long; [of the Coastal Plain] *S. odorata*

Key B

- 1 Lateral sepals widely diverging from the base, 8-10 mm long; lip dilated at base, oblong toward tip, yellow centrally; inflorescence secund to twisted usually only a half-turn from bottom to top; [flowering late October-December] *S. longilabris*
- 1 Lateral sepals spreading to appressed, not widely diverging, 3.8-10 mm long; lip ovate to oblong-quadrate, lacking a distinct basal dilation, white or creamy centrally; inflorescence usually with several spiral cycles (rarely nearly secund); [flowering February-November].
 - 2 Lip with lacerate-dentate tip; leaves usually linear, > 30× as long as wide, persistent and present at flowering; [flowering May-August] *S. laciniata*
 - 2 Lip with undulate to crisped tip; leaves lanceolate to ovate or obovate, < 30× as long as wide, either persistent and present at flowering, or withering prior to flowering.
 - 3 Flowers comparatively large and stout, the perianth 5-10 mm long, white to yellowish, the lip often darker centrally but not green or greenish yellow; leaves ascending, relatively slender, not ovate or obovate, present at flowering; rachis conspicuously and densely glandular-pubescent; [flowering August-November] *S. cernua*
 - 3 Flowers comparatively small and slender, the perianth usually < 5.5 mm long; leaves strictly basal, spreading and ovate to obovate or oblanceolate; rachis glabrous or densely but minutely glandular-pubescent; [flowering February-September].
 - 4 Rachis densely pubescent; flowers yellowish to pale greenish yellow, the lip yellow centrally; [flowering February-April]; [of s. SC southward and westward] *S. brevilabris*
 - 4 Rachis glabrous or sparsely and minutely pubescent; flowers yellowish to white, the lip yellowish or green centrally; [flowering February-September]; [collectively widespread in our area].
 - 5 Flowers yellowish to pale greenish yellow; lip yellow centrally *S. floridana*
 - 5 Flowers white, lip green centrally.
 - 6 Leaves oblanceolate, withering at anthesis; lateral sepals spatulate, green at base; flowering February-May *S. eatonii*
 - 6 Leaves ovate to obovate or elliptic, spreading, present or absent at anthesis; lateral sepals acuminate, white throughout; flowering July-September.
 - 7 Flowers densely arranged on the spike (ratio of spike length in mm: flower number < 2.3); entire plant essentially glabrous; leaves usually absent at anthesis; [flowering earlier, mostly July] *S. lacera* var. *gracilis*
 - 7 Flowers laxly arranged on spike (ratio of spike length in mm: flower number = or > 2.3); inflorescence capitate-pubescent; leaves usually persisting through anthesis; [flowering later, mostly August-September] *S. lacera* var. *lacera*

Spiranthes brevilabris Lindley, Short-lipped Ladies'-tresses. Cp (FL, GA, SC): pine savannas; rare. Late February-April. Se. SC south to s. FL, west to se. TX. [= FNA, K, WH; = *S. gracilis* (Bigelow) Beck var. *brevilabris* (Lindley) Correll – GW; = *S. brevilabris* Lindley var. *brevilabris* – L]

Spiranthes cernua (Linnaeus) L.C. Richard, Nodding Ladies'-tresses. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): bogs, swamps, ditches, usually in acidic, sphagnous situations; common (uncommon in Piedmont and Coastal Plain, rare in FL). July-November. Widespread in e. North America. [= FNA, G, K, L, W, WH; = *S. cernua* var. *cernua* – RAB, C, F, GW, L, X; < *S. cernua* var. *cernua* – F, X; = *Ibidium cernuum* (Linnaeus) House – S]

Spiranthes eatonii Ames ex P.M. Brown, Eaton's Ladies'-tresses. Cp (GA, NC, SC, VA): dry to moist pine flatwoods; uncommon (GA Rare). February-May. A Southeastern Coastal Plain endemic: se. VA south to FL, west to se. TX. Apparently previously confused with *S. lacera*, *S. floridana*, *S. brevilabris*, and *S. tuberosa*, but distinctive in the combination of spring blooming season, white flowers, and basal, narrowly oblanceolate leaves (Brown 1999). [= FNA, K]

Spiranthes floridana (Wherry) Cory, Florida Ladies'-tresses. Cp (GA, NC, SC): wet savannas, other moist sites; rare (GA Rare, NC Rare). April-May. A Southeastern Coastal Plain endemic: se. NC south to FL and west to TX, a Southeastern Coastal

Plain endemic. [= FNA, K; = *S. brevilabris* Lindley var. *floridana* (Wherry) Luer – L; = *S. gracilis* (Bigelow) Beck var. *floridana* (Wherry) Correll – RAB, GW, X; = *Ibidium floridanum* Wherry – S]

Spiranthes lacera (Rafinesque) Rafinesque var. ***gracilis*** (Bigelow) Luer, Southern Slender Ladies'-tresses. Mt, Pd, Cp (GA, NC, SC, VA): fields, meadows, pastures, woodlands; uncommon. August-September. Widespread in se. North America, north to s. NH, MI, WI, and KA. [= C, FNA, K, L, W; = *S. gracilis* (Bigelow) Beck var. *gracilis* – RAB, GW, X; = *S. gracilis* – F; < *S. gracilis* – G (apparently including *S. lacera* var. *lacera*); = *Ibidium gracile* (Bigelow) House – S]

Spiranthes lacera (Rafinesque) Rafinesque var. ***lacera***, Northern Slender Ladies'-tresses. Mt (NC, VA): clearings, openings; rare. July. Nova Scotia and New Brunswick west to Saskatchewan, south to sw. NC, w. VA, TN, and MO. The occurrence of this species in NC is documented by a specimen at DUKE, collected at 5200 feet elevation on Tusquitee bald. [= C, FNA, K, L, W; = *S. lacera* – F (sensu stricto); < *S. gracilis* – G; < *S. gracilis* var. *gracilis* – X]

Spiranthes laciniata (Small) Ames, Lace-lip Ladies'-tresses. Cp (GA, NC, SC), {VA?}: pond cypress depressions and savannas, swamps; rare (NC Rare, SC Rare). May-August. A Southeastern Coastal plain endemic: NJ south to FL and west to se. TX. [= RAB, C, FNA, K, L, X; = *S. ×laciniata* – F, GW; = *Ibidium laciniatum* (Small) House – S]

Spiranthes longilabris Lindley, Giant Spiral Orchid. Cp (GA, NC, SC): wet savannas; rare (GA Rare, NC Threatened, SC Rare). Late October-December. A Southeastern Coastal Plain endemic: se. NC south to FL and west to LA. [= RAB, FNA, GW, K, L, X; = *Ibidium longilabre* (Lindley) House – S]

Spiranthes lucida (H.H. Eaton) Ames, Shining Ladies'-tresses. Mt (NC, VA): sunny seepage over amphibolite or other basic rock; rare (NC Rare, VA Rare). June. Widespread in ne. United States, south to NC, e. TN, sc. TN (Chester et al. 1993), c. AL, MO, and KS. The species was reported for NC by Fernald (1950) and by Small (1933), but was not treated by RAB; its occurrence in NC was verified in 1992 by its discovery in a seepage area in Ashe County. [= C, F, FNA, G, K, L, W, X; *Ibidium plantagineum* (Rafinesque) House – S]

Spiranthes magnicamporum Sheviak, Great Plains Ladies'-tresses. Mt (GA, VA): grassy barrens and glades over limestone; rare (GA Endangered, VA Rare). Primarily in the Great Plains, from ND south to TX, east (often as widely disjunct populations) to sw. Ontario, se. PA, sw. VA (Ludwig 1999), KY, w. TN (Jones 2006), and nw. GA. [= C, FNA, K, L; < *S. cernua* – G; < *S. cernua* var. *cernua* – F, X]

Spiranthes ochroleuca (Rydberg) Rydberg, Yellow Nodding Ladies'-tresses. Mt (NC, SC?, VA): meadows and pastures at moderate to high elevations, up to at least 1500m in elevation; rare (NC Rare, VA Rare). September-October. Largely northeastern, extending south in the mountains to NC. See Sheviak & Catling (1980) and Catling (1983a) for further information on this species. [= FNA, K, L, W; = *S. cernua* var. *ochroleuca* (Rydberg) Ames – C, F, X; = *Ibidium ochroleucum* (Rydberg) House – S]

Spiranthes odorata (Nuttall) Lindley, Fragrant Ladies'-tresses, Marsh Ladies'-tresses. Cp (GA, NC, SC, VA): swamps and marshes; uncommon (VA Rare). September-November. A Southeastern Coastal Plain endemic: se. VA south to FL and west to se. TX. [= F, FNA, G, K, L; = *S. cernua* var. *odorata* (Nuttall) Correll – RAB, C, GW, L, X; = *Ibidium odoratum* (Nuttall) House – S]

Spiranthes ovalis Lindley var. ***erostellata*** Catling, Oval Ladies'-tresses. Pd (NC, SC, VA), Cp (GA, NC, SC), Mt (GA, VA): swamp forests, bottomland forests; uncommon (GA Rare). August-November. Var. *erostellata* is fairly widespread in se. North America, ranging from sc. PA, MI, and IL south to panhandle FL, s. MS, and s. LA. Var. *ovalis* is limited to AR, LA, and TX, differing in having a viscidium and rostellum. See Catling (1983b) for further information about this variety and its biology. [= C, FNA, K, W; < *S. ovalis* – RAB, F, G, GW, L, X; < *Ibidium ovale* (Lindley) House – S; ? *S. montana* Rafinesque]

Spiranthes ovalis Lindley var. ***ovalis***, Oval Ladies'-tresses. Cp (FL, GA): swamp forests, mesic ravines; rare. October-November. GA, TN, AR, and TX south to FL and LA. [= FNA, K, WH; < *S. ovalis* – GW, L, X; < *Ibidium ovale* (Lindley) House – S]

Spiranthes praecox (Walter) S. Watson, Grass-leaved Ladies'-tresses, Giant Ladies'-tresses. Cp (GA, NC, SC, VA), Pd (NC, VA), Mt (GA, VA): savannas, swamps, bogs; uncommon (rare in Piedmont). March-July. A Southeastern Coastal plain endemic: NJ south to FL and west to TX. [< *S. praecox* – RAB, C, F, FNA, G, GW, K, L, W, X (also see *S. sylvatica*); < *Ibidium praecox* (Walter) House – S (also see *S. sylvatica*)]

Spiranthes sylvatica P.M. Brown, Woodland Ladies'-tresses, Pale Green Ladies'-tresses. Cp (GA, NC, SC, VA): live oak hammocks, other woodlands; rare (GA Rare). Late March-early May. VA south to c. peninsular FL, west to e. TX. [< *S. praecox* – RAB, C, F, FNA, G, GW, K, L, X; < *Ibidium praecox* (Walter) House – S]

Spiranthes tuberosa Rafinesque, Little Ladies'-tresses, Little Pearl-twist. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of habitats, especially relatively well-drained woodlands and fields; common. June-September. Widespread in se. North America, north to MA, OH, and MO. [= C, FNA, G, K, L, W; > *S. grayi* Ames – RAB, L, X; > *S. tuberosa* var. *grayi* (Ames) Fernald – F; > *S. tuberosa* var. *tuberosa* – F; *Ibidium beckii* (Lindley) House – S, misapplied]

Spiranthes vernalis Engelmann & A. Gray, Spring Ladies'-tresses. Cp, Pd, Mt (GA, NC, SC, VA): savannas, bogs, marshes, fairly dry fields; common (uncommon in Piedmont, rare in Mountains). March-July (-early September in the mountains). MA to FL and west to TX and SD, also in Mexico and Central America. [= RAB, C, F, FNA, G, GW, K, L, W, X; = *Ibidium vernale* (Engelmann & A. Gray) House – S]

Tipularia Nuttall 1818 (Crane-fly Orchid)

A genus of 3 species; the other species of the genus are e. Asian (1 in Japan and 1 in the Himalayas) (Catling & Sheviak in FNA 2002). References: Catling & Sheviak in FNA (2002a).

Identification notes: The leaves are present during the winter, withering before the flowering stalk appears, the plant thus occasionally mistaken for one of the saprophytic orchids. The leaves are usually purple underneath, a characteristic shared with *Aplectrum*, but *Tipularia* leaves are

ovate, < 10 cm long, and are not notably plicate along the veins (vs. *Aplectrum*, with leaves narrowly elliptic, 10-20 cm long, and notably plicate along the very prominent, white, cartilaginous veins).

Tipularia discolor (Pursh) Nuttall, Cranefly Orchid. Pd, Cp, Mt (GA, NC, SC, VA): in a wide variety of mesic to rather dry forests; common. July-September. Se. MA, s. NY, OH, IN, and s. MI south to FL and TX. Along with *Goodyera pubescens*, *Tipularia* is one of the commonest orchids in NC (indeed in e. North America). [= RAB, C, F, FNA, G, K, L, W, X; = *T. unifolia* (Muhlenberg) Britton, Sterns, & Poggenburg – S]

Triphora Nuttall 1818 (Three Birds Orchid)

A genus of about 25 species, of e. North America, the West Indies, and Central and South America (Medley in FNA 2002).
References: Medley in FNA (2002a); Brown & Pike (2006)=Z.

- 1 Flowers yellow, erect, not opening fully, the lip uppermost *T. rickettii*
- 1 Flowers pink to white, nodding, opening fully, the lip lowermost..... *T. trianthophoros* var. *trianthophoros*

Triphora rickettii Luer. Cp (FL): upland hardwood hammocks; rare. Ne. FL (Columbia County) south into wc. Peninsular FL. Sometimes treated as a disjunct component of the Mexican *T. yucatanensis*. [= L, WH; < *Triphora yucatanensis* Ames – FNA, K]

Triphora trianthophoros (Swartz) Rydberg var. *trianthophoros*, Three Birds Orchid, Nodding Pogonia, Nodding Ettercap. Mt (GA, NC, SC, VA), Cp, Pd (NC, SC, VA): humid forests and swamps, rhododendron thickets, especially on rotten logs or on humus; rare. July-September. The species is widespread (but scattered) in e. North America, and south into Central America. Var. *trianthophoros* occurs from ME and Ontario west to WI, south to c. peninsular FL and e. TX; disjunct in nc. Mexico; var. *mexicana* (S. Watson) P.M. Brown occurs from Mexico south to Central America. The recently named var. *texensis* P.M. Brown & R.B. Pike needs additional evaluation. The flowers are extremely ephemeral, making the species very difficult to locate. The correct spelling of the epithet is “*trianthophoros*.” [= *Triphora trianthophora* (Swartz) Rydberg var. *trianthophora* – Z; = *T. trianthophora* ssp. *trianthophora* – FNA; < *T. trianthophora* – RAB, C, F, G, GW, K, L, S, W, X; < *T. trianthophoros* – WH, orthographic variant]

Zeuxine Lindley 1826 (Soldier Orchid)

A genus of about 26 species, of tropical and subtropical Old World (introduced elsewhere). References: Ackerman in FNA (2002a).

* ***Zeuxine strateumatica*** (Linnaeus) Lindley, Lawn Orchid, Soldier Orchid. Cp (FL, GA): lawns; common (rare north of FL), native of Asia. [= FNA, GW, K, L, WH]

POACEAE (R. Brown) Barnhart 1895 or **GRAMINEAE** A.L. de Jussieu 1789 (Grass Family)

A family of about 670 genera and 10,000 species, cosmopolitan. References: Flora of North America Editorial Committee (2003a, 2007a)=FNA; Hitchcock and Chase (1950)=HC; Blomquist (1948). Key to genera adapted in large part from FNA.

[note: only a small portion of the key to genera complete]

Key to tribes

- 1 Plant a shrub or tree (the culms perennial, woody, to 25 m tall), with complex branching systems from the upper nodes; leaves strongly dimorphic, those of the main culm sheathing, those of the branches or culm tips pseudopetiolate **Key A: tribe Bambuseae**
 - 1 Plant an herb (the culms annual, not truly woody, to 5 m tall), lacking complex branching systems from the upper nodes; leaves not dimorphic, none of them pseudopetiolate.
 - 4 **Key P: tribe Paniceae**
 - 5 **Key Q: tribe Andropogoneae**
 - 4 **Key N: tribe Aristideae**
 - 6 **Key C: tribe Brachyelytreae**
 - 8 **Key B: tribe Oryzaceae**
 - 9 **Key L: tribe Cynodonteae**
 - 10 **Key J: tribe Poaceae**
- 7 [to be continued]

Key A – tribe Bambuseae

Key based on Stapleton (2007).

- 1 Rhizomes pachymorph, having root-bearing internodes thicker than the culm; culms usually in single clumps *Bambusa*
- 1 Rhizomes leptomorph, root-bearing internodes thinner than the culm; culms solitary or in many connected clumps.
 - 2 Mid-culm branches consistently 2, unequal, rarely with a smaller central third branch *Phyllostachys*
 - 2 Mid-culm branches not consistently 2, initially 1-9.
 - 3 Dwarf bamboos, less than 1(-1.5) m tall.
 - 4 Leaf blade margins more or less bleached in winter, terminal blade often angled from shoot axis, blades usually not variegated
..... *[Sasa]*
 - 4 Leaf blade margins not or only slightly bleached in winter, terminal blade parallel to shoot axis, blades often variegated.....
..... *Pleioblastus*
 - 3 Medium-stature to tall bamboo, more than 1 m tall.
 - 5 Mid-culm branches initially 5-9 *Pleioblastus*
 - 5 Mid-culm branches initially 1-3(-5).
 - 6 Mid-culm branches 1(-)-2-7; branches and leaves small to medium relative to culm size; [native] *Arundinaria*
 - 6 Mid-culm branches 1(-)-3; branch and leaves often very large relative to culm size; [alien].
 - 7 Leaf blade margins bleached in winter, terminal blade often deflexed from shoot axis; culm buds initially closed *[Sasa]*
 - 7 Leaf blade margins not bleached in winter, terminal blade parallel to shoot axis; culm buds initially open or closed.....
..... *Pseudosasa*

Key B – tribe Oryzeae

- 1 Lemma margins free; plants perennial.
 - 2 Plants **either** < 1 m tall **or** a floating aquatic with lax stems to 1.5 m long *Luziola*
 - 2 Plants 1-4 m tall, emergent, the stems stout, not lax *Zizaniopsis*
- 1 Lemmas and paleas clasping along their margins; plants annual or perennial.
 - 3 Spikelets either pistillate or staminate, the upper branches of the panicle with pistillate spikelets, the lower branches with staminate spikelets; caryopses terete..... *Zizania*
 - 3 Spikelets bisexual; caryopses laterally flattened.
 - 4 Glumes absent and also lacking glume-like sterile florets subtending the floret; lemmas and paleas pectinately ciliate-hispid on the margins; [native]..... *Leersia*
 - 4 Glumes absent or greatly reduced, glume-like sterile florets subtending the fertile floret; lemmas and paleas glabrous or pubescent, but not pectinately ciliate hispid on the margins; [introduced] *Oryza*

Key C – tribe BrachyelytreaeOne genus *Brachyelytrum***Key D – tribe Diarrheneae**One genus *Diarrhena***Key E – tribe Meliceae**

- 1 Lemmas awned, the awns 8-15 mm long; calluses hairy; [of VA, WV, KY, and northward] *Schizachne*
- 1 Lemmas unawned; calluses glabrous; [collectively widespread in our area].
 - 2 Lower glumes 1-veined; [plants of wetlands] *Glyceria*
 - 2 Lower glumes 3-7-veined; [plants of mesic to dry habitats]..... *Melica*

Key F – tribe Stipeae

- 1 Plants not cespitose, the main leaves cauline..... *[Piptatherum (racemosum)]*
- 1 Plants cespitose, the leaves basally disposed.
 - 2 Leaves > 4 mm wide; awns **either** 7-15 **or** 40-120 mm long.
 - 3 Leaves 4-10 mm wide, the base twisted so that the abaxial surface is uppermost; awns 7-15 mm long *Oryzopsis*
 - 3 Leaves 2-8 mm wide, not twisted at the base; awns 50-120 mm long *[Nassella (neesiana)]*
 - 2 Leaves < 4 mm wide; awns 5-120 mm long
 - 4 Palea grooved, longer than the lemma; lemma margins involute, fitting into the paleal groove; [native species, collectively widespread in our area]..... *Piptochaetium*
 - 4 Palea flat, shorter than or equal to the lemma; lemma margin convolute or not overlapping; [alien and native species, rare in our area].
 - 5 Lemmas papillose and also often pubescent, particularly on the veins, convolute and wrapping around the caryopsis such that the margins strongly overlap; awns 15-120 mm long *Nassella*

- 5 Lemmas smooth, the margins separated and parallel their entire lengths at maturity; awns 5-25 mm long; [native species, of WV northward]..... [*Piptatherum (canadense)*]

Key G – tribe Brachypodieae

One genus.....*Brachypodium*

Key H – tribe Bromeae

One genus.....*Bromus*

Key I – tribe Triticeae

- 1 Spikelets 2-7 at all or most nodes.
 2 Spikelets 3 at each node.....*Hordeum*
 2 Spikelets
 3 Elymus
 3 Secale
 1 Spikelets 1 at all or most nodes.
 Elymus, Pascopyrum, Aegilops, Triticum, Thinopyrum

Key J – tribe Poeae

Poa, Festuca, Deschampsia, Avenilla, Cynosurus, Phalaris, Lagurus, Hainardia, Parapholis, Schedonorus, Vulpia, Lolium, Puccinellia, Sclerochloa, Dactylis, Poa, Torreyochloa, Briza, Aira, Sphenopholis, Deschampsia, Avenella, Agrostis, Polypogon, Lagurus, Phleum, Gastridium, Desmazeria, Cynosurus, Parapholis, Hainardia, Lachnagrostis, Amphibromus, Calamagrostis, Gaudinia, Avena, Holcus, Arrhenatherum, Trisetum, Koeleria, Rostraria, Anthoxanthum, Cinna, Phalaris, Limnodea, Ammophila, Milium, Alopecurus, Apera

Key K – tribe Arundineae

Molinia, Phragmites, Arundo

Key L – tribe Cynodonteae

Uniola, Distichlis, Monanthochloe, Tridens, Triplasis, Leptochloa, Dinebra, Eragrostis, Eleusine, Dactyloctenium, Sporobolus, Calamovilfa, Muhlenbergia, Chloris, Eustachys, Gymnopogon, Ctenium, Cynodon, Spartina, Bouteloua, Tragus, Zoysia

Key M – tribe Danthonieae

Cortaderia, Danthonia

Key N – tribe Aristideae

One genus.....*Aristida*

Key O – tribe Centotheceae

One genus.....*Chasmanthium*

Key P – tribe Paniceae

- 2 First glume 5-7.5 mm long, nearly as long as sterile lemma; fertile lemma 1/3 length of sterile lemma.....*Phanopyrum*
 2 First glume shorter, or if this long, then at most 3/4 length of sterile lemma; fertile lemma > 1/2 the length of the sterile lemma.
 3 Sterile palea indurate and expanding the spikelet at maturity, as long as sterile lemma; outer surface of the distal palea with compound papillae.....*Steinchisma*
 3 Sterile palea membranous, not expanding the spikelet at maturity, usually shorter than sterile lemma or absent; outer surface of the distal palea lacking compound papillae.....*Panicum*
 Digitaria, Anthenantia, Alloteropsis, Amphicarpum, Oplismenus, Echinochloa, Sacciolepis, Dichanthelium, Panicum, Megathyrsus, Phanopyrum, Brachiaria, Melinis, Urochloa, Eriochloa, Pennisetum, Cenchrus, Setaria, Stenotaphrum, Steinchisma, Axonopus, Paspalum, Reimarochloa

Key Q – tribe *Andropogoneae*

Add to genus key: *Elionurus*, *Hackelochloa*.

- 1 Leaves ovate-lanceolate, 2-10 cm long, 2.5-7× as long as wide; plants weak-stemmed annuals, branching, decumbent, rooting at the lower nodes; [alien weeds].
 - 2 Leaves cordate-clasping at base; spikelets not paired, unaccompanied by a vestige *Arthraxon*
 - 2 Leaves tapering to a broadly cuneate base; spikelets paired (one of the pair sometimes vestigial) *Microstegium*
- 1 Leaves lanceolate to linear, either longer or proportionately narrower; plants either perennial or coarse annuals with erect and mostly unbranched culms.
 - 3 Spikelets embedded in the thickened rachis (the inflorescence thus like an ear of corn), or fitting into grooves in the thickened rachis (the inflorescence thus cylindrical and resembling a rat's tail), or the pistillate inflorescences enclosed in a hard, bead-like, pearly-white, modified bract.
 - 4 Spikelets unisexual, with male and female spikelets in separate inflorescences or in different parts of the same inflorescence.
 - 5 Internode narrower than and more-or-less enclosed by the female spikelet *Coix*
 - 5 Internode broader than and more-or-less enclosing the female spikelet.
 - 6 Racemes of mixed sex (female below, male above) *Tripsacum*
 - 6 Racemes of single sex *Zea*
 - 4 Spikelets, or at least one of each pair, bisexual.
 - 7 Pedicels fused to the internode; [coarse alien grass of disturbed habitats] *Rottboellia*
 - 7 Pedicels free from the internodes; [either a native coarse grass of pinelands or prairie-like areas, or a short alien grass of lawns and disturbed areas].
 - 8 Sessile spikelet smooth or pitted; culms 50-200 cm tall; [native grass of pinelands or prairie-like areas] *Coelorachis*
 - 8 Sessile spikelet with pectinate margins; culms 5-40 cm tall; [alien grass of lawns and disturbed areas] *Eremochloa*
 - 3 Spikelets not embedded or fitting into grooves in the rachis, the rachis slender (the spikelets visibly separate and often pedicelled).
 - 9 Pedicelled spikelet similar to the sessile spikelet, both fertile.
 - 10 Spikelets falling in pairs together with sections of the disarticulating rachis *Saccharum*
 - 10 Spikelets falling separately from the persistent rachis.
 - 11 Panicle contracted, spikelike; glumes membranous *Imperata*
 - 11 Panicle loose; glumes cartilaginous or coriaceous *Miscanthus*
 - 9 Pedicelled spikelet differing from the sessile in shape and sex (sometimes represented only by a pedicel).
 - 12 Spikelets awned, the awn 10-20 cm long.
 - 13 First glume lacking glands; panicle open, the branches 5-8 cm long *Chrysopogon*
 - 13 First glume with a row of punctate, concave glands; panicle contracted, spikelike *Heteropogon*
 - 12 Spikelets awned or not, if awned the awn < 5 cm long.
 - 14 Inflorescence a panicle, the branches not subtended by sheaths.
 - 15 Pedicelled spikelet represented by pedicel only; apex of sheath bearing 2 auricles 1-10 mm long; [native] *Sorghastrum*
 - 15 Pedicelled spikelet present, staminate; apex of sheath truncate; [alien] *Sorghum*
 - 14 Inflorescence of 1-13 digitate (whorled) racemes borne at the summit of a peduncle, the peduncle subtended by a raceme sheath.
 - 16 Racemes 1 per peduncle and raceme sheath *Schizachyrium*
 - 16 Racemes 2-13 per peduncle and raceme sheath.
 - 17 Pedicels of the pedicelled (reduced or absent) spikelets terete or slightly flattened and grooved on one side only *Andropogon*
 - 17 Pedicels of the pedicelled (reduced or absent) spikelets strongly flattened and grooved on both sides, the central portion thin or membranous *Bothriochloa*

Aegilops Linnaeus 1753 (Goatgrass)

A genus of about 23 species, annuals, of w. Asia east to the Mediterranean region. References: Saufferer in FNA (2007a); Tucker (1996)=Z.

- 1 Spikelets cylindrical; glumes with 4 awns; rachis disarticulating at maturity *Ae. cylindrica*
- 1 Spikelets nearly ovate; glumes with 1 awn; rachis not disarticulating at maturity *Ae. neglecta*

* *Aegilops cylindrica* Host, Jointed Goat Grass. Mt, Pd (VA): disturbed areas; uncommon, native of s. Europe. [= C, F, FNA, G, HC, K, Z]

* *Aegilops neglecta* Requien ex Bertoloni, Small Goat Grass, Three-awned Goatgrass. Cp (VA): disturbed areas; rare, native of s. Europe. Reported from Arlington County, VA. [= FNA, Z; *Ae. ovata* Linnaeus – C, G, HC, apparently misapplied; *Ae. geniculata* Roth – K, apparently misapplied]

* *Aegilops triuncialis* Linnaeus var. *triuncialis*, Barbed Goatgrass. Disturbed areas. Known from MD. [= FNA; < *Ae. triuncialis* – HC, K] {not keyed}

* *Aegilops ventricosa* Tausch, Swollen Goatgrass. Disturbed areas. Known from DE. [= FNA] {not keyed}

Agrostis Linnaeus 1753 (Bentgrass)

A genus of about 220 species, primarily temperate. References: Harvey in FNA (2007a); Tucker (1996)=Z. [also see *Lachnagrostis* and *Polypogon*]

- 1 Palea 1/2-3/4 as long as the lemma, 0.6-1.2 mm long; plants introduced, often (though not always) in disturbed habitats; plants flowering June-October; [subgenus *Agrostis*].
- 2 Ligule mostly 0.5-2 mm long, truncate; panicle branches naked towards the base, diffuse when in fruit, the spikelets well-separated..... *A. capillaris*
- 2 Ligule mostly 2.5-6 mm long, acute, rounded, or truncate; panicle branches (some of them) with spikelets to near the base, the spikelets usually agglomerated.
- 3 Leaves 3-8 mm wide; inflorescence triangular-ovoid, the branches widely spreading at maturity, usually reddish; plant with rhizomes, without stolons..... *A. gigantea*
- 3 Leaves mostly 1-3 mm wide; inflorescence narrowly ovoid, the branches ascending at maturity, usually tan; plant without rhizomes, with or without stolons.
- 4 Stolons well developed; leaves mostly < 5 cm long..... *A. stolonifera* var. *palustris*
- 4 Stolons poorly developed or absent; leaves mostly > 7 cm long..... *A. stolonifera* var. *stolonifera*
- 1 Palea < 2/5 as long as the lemma, 0-0.5 mm long; plants native, typically in more or less natural habitats; plants flowering March-November; [subgenus *Vilfa*].
- 5 Lemma usually awned (sometimes unawned), the awn inserted near the tip, 4-10 mm long, straight, very delicate and flexuous; annual, flowering April-June..... *A. elliotiana*
- 5 Lemma awned or not, the awn (when present) inserted either near the middle of the lemma or near the apex, 0-6 mm long, straight or bent, neither delicate nor flexuous; perennial, flowering March-November.
- 6 Lemma with a (2-) 3-5 mm long, geniculate awn.
- 7 Anthers 1.0-1.5 mm long; spikelets 1.7-3.0 mm long; plant loosely cespitose, with stolons to 25 cm long..... [*A. canina*]
- 7 Anthers 0.5-0.8 mm long; spikelets 2.0-4.0 mm long; plant densely cespitose..... *A. mertensii*
- 6 Lemma awnless or with a 0-3 mm long awn, this often straight (rarely geniculate in *A. scabra*).
- 8 Spikelets 1.2-2 mm long; anthers 0.3-0.6 mm long; lemma never awned; plants flowering March-July..... *A. hyemalis*
- 8 Spikelets 1.8-3.5 (-3.7) mm long; anthers 0.3-1.5 mm long; lemma awnless or awned; plants flowering June-November.
- 9 Leaves (at least the basal) mostly involute, 1-2 (-3) mm wide; panicle branches mostly forking well beyond the middle; anthers 0.4-0.8 mm long..... *A. scabra*
- 9 Leaves flat, 2-6 mm wide; panicle branches mostly forking at or below the middle; anthers 0.3-1.2 mm long.
- 10 Lemma 1.8-3 mm long, minutely but copiously scabrous (at 20× or more); anthers 0.7-1.2 mm long; spikelets (2.3-) 2.7-3.5 (-3.7) mm long, usually clustered near the tips of the branchlets; panicle branches scabrous; culms to 15 dm tall; [of wet savannas and other wet habitats of the Coastal Plain]..... *A. altissima*
- 10 Lemma 1.4-2 mm long, glabrous; anthers 0.3-0.6 mm long; spikelets (1.8-) 2.2-2.7 (-3.2) mm long, usually not clustered near the tips of the branchlets; panicle branches glabrous to scabrous; culms to 10 dm tall; [of various habitats, nearly throughout our area]..... *A. perennans*

Agrostis altissima (Walter) Tuckerman, Coastal Bog Bentgrass. Cp (FL, GA, NC, SC, VA), Mt (VA): wet savannas, sinkhole ponds, edges of swamp forests; rare. October-November. MA (?) and NJ south to se. LA, primarily on the Coastal Plain. [= F, HC, Z; < *A. perennans* – RAB, FNA GW, K, WH; = *A. perennans* var. *elata* (Pursh) A. Hitchcock – C, G, S]

* *Agrostis capillaris* Linnaeus, Rhode Island Bentgrass, Colonial Bentgrass, Browntop. Mt (NC, SC, VA), Pd (VA), Cp (VA): meadows, roadsides, disturbed areas; uncommon, native of Europe (and possibly n. North America). June-August. [= C, FNA, K, Z; = *A. tenuis* Sibthorp – RAB, G, HC, S, W, WV; > *A. tenuis* var. *tenuis* – F]

Agrostis elliotiana J.A. Schultes, Elliott's Bentgrass, Southern Bentgrass. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA), Mt (GA, NC, SC): dry soils of barrens, fields, and rock outcrops; uncommon (rare in VA). April-June. MD west to s. OH, and e. KS, south to Panhandle FL (Gadsden County) and c. TX. [= RAB, C, F, FNA, G, HC, K, S, W, WH, Z]

* *Agrostis gigantea* Roth, Redtop, Black Bentgrass. June-October. Mt, Pd (GA, VA), Cp (VA), {provinces} (AL, LA, MS, NC?, SC): fields, roadsides, disturbed areas; common, native of Eurasia. [= C, F, FNA, K, W, Z; < *A. stolonifera* – RAB, GW; = *A. stolonifera* Linnaeus var. *major* (Gaudin) Farwell – G; = *A. alba* – HC, WV, misapplied; > < *A. alba* – S, misapplied]

Agrostis hyemalis (Walter) Britton, Sterns, & Poggenburg, Ticklegrass, Small Bentgrass. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): roadsides, other disturbed habitats; common. March-July. ME west to WI, south to FL and TX. [= F, FNA, K, WH, WV, Z; < *A. hyemalis* – RAB (also see *A. scabra*); = *A. hyemalis* var. *hyemalis* – C, G; = *A. hiemalis* – GW, HC, orthographic variant; < *A. hiemalis* – S, W, orthographic variant (also see *A. scabra* var. *scabra*) {FL}]

Agrostis mertensii Trinius, Arctic Bentgrass. Mt (NC, VA): in thin soil of high elevation rocky summits; rare (NC Rare). July-August. Circumboreal, in North America south to ME (Mt. Katahdin), NH (White Mountains), VT, NY (Adirondack Mountains), WV (Spruce Knob), TN (Roan Mountain, Abrams Creek), NC (Roan Mountain, Big Yellow Mountain, Black Mountains), Québec, British Columbia, CO, UT (?), and AK. [= C, FNA, K, W, Z; > *A. borealis* Hartman – RAB, HC, S, WV; > *A. borealis* Hartman var. *americana* (Scribner) Fernald – F, G]

Agrostis perennans (Walter) Tuckerman, Upland Bent, Autumn Bentgrass. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): woodlands, forests, roadsides; common. August-October. Newfoundland west to MN, south to n. FL and TX; c. Mexico south to c. South America. [= HC, WV, Z; < *A. perennans* – RAB, FNA, GW, K, W, WH (also see *A. altissima*); = *A. perennans* var. *perennans* – C, G, S; > *A. perennans* var. *perennans* – F; > *A. perennans* var. *aestivalis* Vasey – F]

Agrostis scabra Willdenow, Fly-away Grass, Rough Bentgrass. Mt (VA), {FL, GA, NC, SC, VA}. (VA Watch List). June-November. Throughout North America, though mainly in cooler climates; ne. Asia. [= FNA, GW, K, WH, Z; < *A. hyemalis* – RAB, W; = *A. hyemalis* (Walter) Britton, Sterns, & Poggenburg var. *scabra* (Willdenow) Blomquist – C; > *A. scabra* var. *scabra* – F; = *A. hyemalis* (Walter) Britton, Sterns, & Poggenburg var. *tenuis* (Tuckerman) Gleason – G; = *A. scabra* var. *scabra* – HC]

* *Agrostis stolonifera* Linnaeus var. *palustris* (Hudson) Farwell, Creeping Bentgrass. {FL, GA, NC, SC, VA}: disturbed areas, wet, moist, or dry; common, native of Europe. June-October. [= C; < *A. stolonifera* – RAB, FNA GW, W, WH (also see *A. gigantea*); = *A. alba* Linnaeus var. *palustris* (Hudson) Persoon – F, misapplied; = *A. stolonifera* var. *compacta* Hartman – G; = *A. palustris* Hudson – HC, WV, Z; < *A. stolonifera* – K; < *A. alba* – S, misapplied] {FL?}

* *Agrostis stolonifera* Linnaeus var. *stolonifera*. {FL, GA, NC, SC, VA}: disturbed areas, wet, moist, or dry; common, native of Europe. June-October. [= C, G; < *A. stolonifera* – RAB, FNA, GW, W, WH (also see *A. gigantea*); = *A. alba* Linnaeus var. *alba* – F, misapplied; = *A. stolonifera* – HC, Z; < *A. stolonifera* – K; >> *A. alba* – S, misapplied] {FL?}

* *Agrostis canina* Linnaeus, Brown Bentgrass, Velvet Bentgrass. Roadsides, open areas, lawns. Native of Eurasia, south in North America to DE, se. PA (Rhoads & Klein 1993), WV, and TN (Kartesz 1999). [= C, F, FNA, G, HC, K, WV]

Aira Linnaeus 1753 (Hair Grass)

A genus of 8-9 species, annuals, native of Europe, n. Africa, and w. Asia. References: Wipff in FNA (2007a); Tucker (1996)=Z.

- 1 Panicle dense and spike-like, 0.5-4.1 cm long, 0.3-0.7 cm wide, the branches short and appressed to ascending *A. praecox*
 1 Panicle open, 1.2-13.5 cm long, 1.5-10 cm wide, the branches elongate, diffusely spreading or ascending.
 2 Pedicels usually 1-2× as long as the spikelets; lemma of both the lower floret and the upper floret with an awn 2-4 mm long *A. caryophylla*
 2 Pedicels usually 2-8× as long as the spikelets; lemma of upper floret with an awn 1.5-2.5 mm long, lemma of the lower floret awnless or with a minute awn < 1 mm long *A. elegantissima*

* *Aira caryophylla* Linnaeus, Silver Hair Grass. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, VA), Mt (NC): fields, roadsides, disturbed areas; uncommon, native of Europe. May. [= RAB, C, G, HC, K, WH, Z; = *Aira caryophylla* var. *caryophylla* – FNA; = *Aspris caryophylla* (Linnaeus) Nash – S]

* *Aira elegans* Willdenow ex Kunth, Elegant Hair Grass. Pd (GA, NC, SC, VA), Cp (GA, NC, SC, VA), Mt (GA, SC): fields, roadsides, disturbed areas; common, native of Europe. May-June. [= RAB, G, HC, K; = *Aira elegantissima* Schur – C, Z; = *Aira caryophylla* Linnaeus var. *capillaris* (Mertens & W.D.J. Koch) Mutel – FNA; = *Aspris capillaris* (Host) A.S. Hitchcock – S]

* *Aira praecox* Linnaeus, Early Hair Grass, Spike Hairgrass. Cp (NC, VA): fields, roadsides, disturbed areas; uncommon, native of Europe. Reported for NC by Burk (1961), and recently collected in the NC Sandhills (B.Sorrie, pers.comm. 2004). [= C, G, HC, K, Z]

Alloteropsis J. Presl 1828

A genus of 5-8 species, annuals and perennials, native of tropical Asia and Australia. References: Hall in FNA (2003a).

* *Alloteropsis cimicina* (Linnaeus) Stapf, Bugseed Grass. Cp (FL): disturbed areas; rare, native of se. Asia. Naturalized in Florida Panhandle and ne. FL. [= FNA, WH]

Alopecurus Linnaeus 1753 (Foxtail Grass)

A genus of about 36 species, north temperate and temperate South America. References: Tucker (1996)=Z.

- 1 Glumes 4-6 mm long, acute or acuminate.
 2 Glumes with hairs < 1.0 mm long on the keel, merely scabrous towards the tip *A. myosuroides*
 2 Glumes with hairs 1.0-1.5 mm long on the keel, including towards the tip *A. pratensis*
 1 Glumes 2-3.2 mm long, obtuse or truncate.
 3 Awn about as long as the glumes (at most exceeding the glumes by 1 mm) *A. aequalis* var. *aequalis*
 3 Awn longer than the glumes, exceeding the glumes by 1.5-3.5 mm.
 4 Anthers 0.4-0.7 mm long; annual *A. carolinianus*
 4 Anthers 1.3-2 mm long; perennial *A. geniculatus*

Alopecurus aequalis Sobolewski var. *aequalis*, Short-awn Foxtail Grass. Mt (VA): [habitat]; rare (VA Watch List). Circumboreal, south in North America to NJ, w. VA, IN, MO, and CA. [= F, K; < *A. aequalis* – C, G, HC]

Alopecurus carolinianus Walter, Carolina Foxtail Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA): moist fields, ditches, forests; common (rare in Mountains). April-May. MA west to British Columbia, south to n. FL and CA. [= RAB, C, F, G, GW, HC, K, WH, WV, Z; = *A. ramosus* Poiret – S]

* *Alopecurus geniculatus* Linnaeus, Water Foxtail Grass. Pd, Cp (VA): disturbed areas; rare, native of Eurasia. [= C, F, G, HC; > *A. geniculatus* var. *geniculatus* – K]

* *Alopecurus myosuroides* Hudson, Slender Foxtail Grass. Pd (NC, VA), Cp (VA): moist fields; uncommon, native of Europe. April-May. [= RAB, C, F, G, HC, K, S, WV, Z]

* *Alopecurus pratensis* Linnaeus, Meadow Foxtail. Mt (NC, VA), Pd (GA), Cp (VA): roadsides, fields; rare, native of Eurasia. May-July. Reported for Piedmont of nc. GA (Jones & Coile 1988), for scattered locations in PA (Rhoads & Klein 1993), and for VA, KY, WV, MD, and DE (Kartesz 1999). [= C, F, G, HC, K, WV]

Ammophila Host 1809 (Beach-grass)

A genus of 2-3 species, rhizomatous perennials, north temperate. References: Barkworth in FNA (2007a); Tucker (1996)=Z.

- 1 Ligule 10-35 mm long [A. arenaria]
 1 Ligule 1-4.6 mm long A. breviligulata

Ammophila breviligulata Fernald, American Beach-grass. Cp (NC, SC*, VA): dunes; common. August-September. Newfoundland south to about Cape Hatteras, Dare County, NC, and on shores around the Great Lakes; planted further south. As a native grass, *Ammophila* ranged south only to NC, where it was rare; it is now commonly planted ("sprigged") in the Carolinas as a sand-binder and is now common south into SC. [= K; < A. breviligulata – RAB, F, G, HC, S; = A. breviligulata ssp. breviligulata – FNA; ? A. breviligulata – C, Z]

* *Ammophila arenaria* (Linnaeus) Link, European Beach-grass. Introduced in MD and PA (Kartesz 1999). Native of Europe. [= C, F, FNA, HC, K]

Amphibromus Nees 1843

A genus of about 12 species, annuals and perennials, native of Australia, New Zealand, and South America. References: Jacobs in FNA (2007a).

* *Amphibromus scabrivalvis* (Trinius) Swallen var. *scabrivalvis*, Rough Amphibrome. Established in Tangipahoa Parish, LA; native of South America. [= FNA; < *Amphibromus scabrivalvis* – K; < *Helictotrichon scabrivalve* (Trinius) G. Tucker]

Amphicarpum Kunth 1829 (Peanut-grass)

The genus consists only of the two species treated here, remarkable for their dimorphic spikelets, some of them cleistogamous and subterranean, others aerial and chasmogamous. A series of publications over the past century make *Amphicarpum* one of the best studied "useless" grasses anywhere (Holm 1896; Weatherwax 1934; Gray & Fairbrothers 1971; McNamara & Quinn 1977; Cheplick & Quinn 1982, 1983, 1986, 1987, 1988a, 1988b; Cheplick 1989). References: Wipff in FNA (2003a).

- 1 Leaf blades hirsute with pustular-based hairs on both surfaces, the margins ciliate (and also slightly cartilaginous-thickened); [of moist to wet, peaty or sandy-peaty soils] A. amphicarpon
 1 Leaf blades glabrous, the margins cartilaginous-thickened; [of seasonally flooded natural ponds] A. muhlenbergianum

Amphicarpum amphicarpon (Pursh) Nash, Pinebarrens Peanut-grass. Cp (DE, GA, MD, NC, NJ, SC, VA): wet, peaty, open soils, especially peat-burns in pocosin edges, primarily in the outer Coastal Plain, responding strongly to fire; uncommon (rare in VA). August-October. An Atlantic Coastal Plain endemic, scattered and rather rare, from e. MA to GA. If one carefully excavates young plants in spring or summer, they will generally be found to be connected to the remnants of the previous year's subterranean spikelet. [= FNA; = *Amphicarpum purshii* Kunth – RAB, C, F, G, GW, HC, K; = *Amphicarpon amphicarpon* (Pursh) Nash – S]

Amphicarpum muhlenbergianum (J.A. Schultes) Hitchcock, Florida Peanut-grass, Blue Maiden-cane. Cp (AL, FL, GA, NC, SC): natural depression ponds, flatwoods ponds, clay-based Carolina bays; rare. August-October. A Southeastern Coastal Plain endemic: FL and s. AL north to se. NC, rare north of s. GA. First found in NC in the late 1980's by M. Boyer. [= RAB, FNA, GW, HC; = A. muhlenbergianum – K, orthographic variant; = *Amphicarpon floridanum* Chapman – S]

Andropogon Linnaeus 1753 (Broomsedge, Bluestem)

A genus of about 100-110 species, mainly tropical. [also see *Bothriochloa* and *Schizachyrium*]

The difference between this treatment and that in RAB may cause some users to react with skepticism, dismay, or alarm, but I am confident that it represents a much truer description of the genus. Campbell's work (1983, et seq.) has greatly clarified the taxonomy of *Andropogon* in e. North America. Great confusion and disagreement were previously the rule in dealing with the *A. virginicus*-*A. glomeratus* complex. Campbell's careful morphologic work has provided workable technical characters which distinguish the taxa he recognizes.

I have generally followed Campbell (1983, et seq.) in his circumscriptions of taxa. I disagree, however, with his strongly morphologic species concept and the basis for his decisions regarding the rank of the taxa (species, variety, and "variant," an informal, English name for a subvarietal entity). Campbell bases the rank recognition of taxa on their "morphological distance"

from one another, as determined by the sum of non-matching characters out of 33 characters analyzed. In general, he regards species as separated by a morphologic distance of 9 or more, varieties by 6 or more, and variants by 3 or more. Such an approach fails to take into account additional evidence of the ecological preferences, geographic distributions, reproductive isolation, evolutionary pathways, and population biology of the taxa.

Evidence presented by Campbell (1983) is useful in determining a more meaningful assignment of taxonomic rank. For instance, he states that "there are ample opportunities for gene flow between taxa because they frequently grow together and flower at the same time of day and (mostly) at the same time of year. I have observed two taxa growing within one to three meters of one another over our hundred times. In only five of these opportunities for hybridization were there plants whose intermediate morphology suggested that they were hybrids. In the rare instances where hybridization does take place, there are few mature hybrid individuals. I have found only twelve putative hybrid individuals in the five localities where hybridization is suspected. The parents outnumber these hybrids by between five and one hundred or more to one." In discussing *A. virginicus* var. *glaucus* (here treated as *A. capillipes*) he states "the drylands variant ... produces generally shorter raceme sheaths, racemes, and spikelets; its flowers are more frequently chasmogamous, and unlike the wetlands variant, it has no hairs below the raceme sheath. In addition, it grows in better-drained soil and has a narrower geographic range ... I have seen these taxa growing within one to three meters of one another at three localities in northwestern Florida. At only one of these was there difficulty in classifying any individual: a single plant on a slope between a bog inhabited by the wetlands variant and a roadside lined with the drylands variant..."

Some additional examples would be Campbell's discussion of several closely related taxa in the *A. glomeratus* complex. "*Andropogon glomeratus* var. *glomeratus* and the robust variant of var. *pumilus* have inflorescences so similar in shape that most previous workers have united them and have overlooked the differences between them. The robust variant is taller, usually with rather smooth sheaths and with shorter, more ciliate, and darker ligules, narrower raceme sheaths, and lower glume keels that are scabrous below the middle. Although both taxa grow in wet sites, the robust variant is weedier, shows a greater tolerance for drier conditions and various soil types, and has a wider geographic range." His discussion of *A. glomeratus* var. *glaucoptis* and var. *hirsutior* is also worth repeating. "Often the two grow together in populations of thousands of individuals. Because they grow together so frequently and are morphologically so alike, the possibility that they are not distinct taxa but merely genetic segregates of one another has been carefully considered. Based on observations of several hundred seedlings grown from seeds from both taxa (growing together in nature), there is no evidence for [mere] genetic segregation. The glaucousness/greenness and pubescence/glabrousness of the stem sheaths are discernible in the seedlings within a few weeks of germination."

Taxa differing in numerous morphologic characters, with different (though overlapping) geographic ranges, with different ecological preferences (often rather narrowly segregated by hydrology), and (when they do occur in proximity to one another) showing little or no sign of introgression or hybridization are probably better treated as biological species. Thus, I have treated a number of Campbell's varieties as species. Several of his "variants" also seem to warrant taxonomic recognition, at varietal or specific rank; in fact, he subsequently elevated several (Campbell 1986). References: Campbell (1983)=Z; Campbell in FNA (2003a). Key adapted in part from Z.

Identification notes: A thorough understanding of the architecture of the inflorescences of *Andropogon* is necessary in order to identify them successfully. The parts will be described, beginning from the apex of a branch of the inflorescence. Spikelets occur in pairs, the sessile spikelet (usually just referred to as the **spikelet**) and the **pedicelled spikelet**, which is usually vestigial or absent (except in *A. gerardii*) and sterile (except in *A. gerardii*, where it is staminate). The first or **lower glume** of the sessile spikelet has two **keels**, and the presence and location of antrorse prickle hairs (scabrousness) is an important character in the *A. glomeratus* complex. The length of the sessile spikelet is an important character; it should be measured exclusive of the **awn**, borne at the apex of the lemma. Awn length is also a useful taxonomic character. The pedicelled spikelet is borne on the **pedicel**, which is attached at the base of the sessile spikelet and typically angles away from it at about a 45 degree angle. The **rachis internode** extends from the base of one sessile spikelet to the next sessile spikelet above, breaking apart (upon dehiscence) just below the next spikelet and remaining attached to the sessile spikelet below. The **dispersal unit** consists of a sessile spikelet sitting in the V shape formed by (on one side) the pedicel and pedicelled spikelet and (on the other side) the rachis internode. Both the pedicel and the rachis internode are usually pubescent with long hairs, and the color of those hairs and their distribution are useful characters.

While the dispersal units are still attached to one another, the rachis internodes form a continuous and more-or-less straight **rachis**. The dispersal units attached together in an unbranched sequence are termed a **raceme**, whose length is a useful character. Two or more racemes are attached digitately at the summit of the **peduncle** (in *Schizachyrium* only a single raceme is found). The number of racemes attached is an important character. A **raceme sheath** subtends the peduncle, often more or less surrounding the peduncle and the racemes. The length of the peduncle (distance between the points of attachment of the raceme sheath and the racemes) is an important character. The length and width (at its widest point) of the raceme sheath are very useful characters, used throughout the key. The racemes, peduncle and subtending raceme sheath make up an **inflorescence unit**. The overall inflorescence is more-or-less complexly branched; its overall size and shape are very useful in recognizing the various taxa, but variation in such a subjective (and environmentally plastic) character has added to the taxonomic confusion in *Andropogon*. The use of inflorescence shape in the key has been minimized, but is often mentioned in the discussion of each species. The number of inflorescence units per plant varies from species to species, in some species rarely exceeding 10, in others ranging upwards to 500 or 600. The absence or presence of hairs immediately below the raceme sheath is useful in some groups.

There are several important characters of the foliage. *A. capillipes* and *A. glaucoptis* have culm sheaths and leaf blades that are strongly glaucous; this is usually very obvious, but can be tested for by running the finger along the surface of the leaf (a white coating of wax will come off on the finger). The key often calls for the ligule length; measure the longest portion of the undivided portion of the ligule. The ligule often has an erose or ciliate upper margin; measure the length of the ciliations. The length of leaf blade is measured from the ligule to the leaf apex; do not include the leaf sheath, which is often long and (especially late in the year) only loosely sheathing the culm or even divergent it. Whether the culm is antrorsely scabrous or smooth is better determined by touch than by sight. Choose several mid-culm sheaths, run one's finger downwards

and upwards along the sheath surface (near the collar is best). If the sheath is antrorsely scabrous one will feel a somewhat greater resistance to moving the finger downwards than upwards.

- 1 Pedicellate spikelet staminate, as large as the sessile, fertile spikelet; sessile spikelets > 7 mm long; [section *Andropogon*]..... *A. gerardii*
- 1 Pedicellate spikelet sterile, vestigial or absent; sessile spikelets < 7 mm long; [section *Leptopogon*].
 - 2 Leaves strongly glaucous (often nearly white with a powdery wax that can be rubbed off on the fingers), glabrous.
 - 3 Ligules (0.9-) 1.5 (-2.0) mm long, with ciliations 0-0.2 mm long; leaf blades usually (33-) avg. 40 (-75) cm long; pubescence beneath raceme sheaths moderate to dense; raceme sheaths (2.0-) 2.4-3.6 (-4.4) cm long, (1.3-) 2.0-2.5 (-3.0) mm wide..... *A. glaucopsis*
 - 3 Ligules (0.2-) 0.4 (-0.5) mm long, with ciliations 0.3-1.2 mm long; leaf blades (12-) avg. 19 (-38) cm long; pubescence beneath raceme sheaths absent to dense; raceme sheaths (2.1-) 2.9-4.3 (-6.0) cm long, (2.7-) 3.1-3.8 (-5.5) mm wide.
 - 4 Summit of branchlet below attachment of raceme sheath pubescent with hairs 2-4 mm long; raceme sheaths (2.4-) 3.2-4.8 (-6.0) cm long; spikelets (3.0-) 3.5-3.9 (-4.4) mm long; racemes (1.5-) 2.0-3.0 (-4.0) cm long; leaves 2.5-6.5 mm wide, averaging 5 mm; upper floret lemma awn 0.9-2.1 mm long, averaging 1.4 mm..... *A. capillipes* var. 1 ["wetland variant"]
 - 4 Summit of branchlet below attachment of raceme sheath glabrous; raceme sheaths (2.1-) 2.6-3.8 (-4.9) cm long; spikelets (2.6-) 3.2-3.5 (-3.9) mm long; racemes (1.4-) 1.7-2.4 (-3.2) cm long; leaves 2-5 mm wide, averaging 3.5 mm; upper floret lemma awn 0.6-1.5 mm long, averaging 1.1 mm..... *A. capillipes* var. 2 ["dryland variant"]
 - 2 Leaves green (to somewhat glaucous, but never powdery white), pubescent or glabrous.
 - 5 Upper culm sheaths distinctly broadened and strongly overlapping, often largely hiding the raceme sheaths before senescence (but in some forms with the raceme sheaths strongly exerted); culms mostly < 1 m tall (to 1.4 m tall)..... *A. elliotii*
 - 5 Upper culm sheaths reduced, not strongly overlapping, not hiding the raceme sheaths after anthesis; culms mostly > 1 m tall (except *A. perangustatus*, *A. tracyi*, and small forms of *A. virginicus*).
 - 6 Many or all peduncles longer than the subtending raceme sheaths at maturity, racemes then fully exerted above the apex of the raceme sheath.
 - 7 Inflorescence branches arching outwards in pronounced curves; racemes (1.2-) 1.5-2.1 (-2.6) cm long; awn (0.2-) avg. 0.7 (-1.1) cm long; spikelets (4.1-) 4.4-4.6 (-5.0) mm long..... *A. brachystachyus*
 - 7 Inflorescence branches erect; racemes (2.2-) 2.6-6 cm long; awn 0.5-2.0 cm long; spikelets (4.3-) 4.9-6.5 (-7.5) mm long.
 - 8 Lower glumes more or less folded; stamen 1; racemes (2.2-) 2.6-4.3 (-5.3) cm long; awn (0.5-) avg. 0.8 (-1.6) cm long; spikelets (4.3-) 4.9-5.4 (-6.1) mm long..... *A. arctatus*
 - 8 Lower glumes flat; stamens 3; racemes 3-6 cm long; awn 1-2 cm long; spikelets (4.5-) 5-6.5 (-7.5) mm long..... *A. ternarius* var. *ternarius*
 - 6 Peduncles all shorter than the subtending raceme sheaths at maturity, at least the bases of the racemes not exerted above the apex of the raceme sheath.
 - 9 Inflorescence units with (2-) 4-7 (-13) racemes; raceme sheaths (4.1-) 5.3-8.0 (-10-1) mm wide; hairs of the rachis internode and pedicel yellow-tawny when dry..... *A. mohrii*
 - 9 Inflorescence units with 2-5 (-7) racemes; raceme sheaths (1.5-) 2.0-4.8 (-6.3) mm wide; hairs of the rachis internode and pedicel gray to whitish when dry.
 - 10 Postflowering peduncles < 10 mm long.
 - 11 Culm sheaths antrorsely scabrous (often hirsute as well); leaf blades usually > 35 cm long.
 - 12 Ligules (0.6-) 0.8 (-1.3) mm long (usually < 1 mm long), with ciliations 0.2-0.9 mm long; raceme sheaths (1.5-) 2.0-2.5 (-3.0) mm wide (usually < 2.5 mm wide); keels of first glume often scabrous below the middle..... *A. tenuispatheus*
 - 12 Ligules (0.7-) 1.2 (-2.2) mm long (usually > 1 mm long), with ciliations 0.0-0.3 mm long; raceme sheaths (2.0-) 2.4-3.4 (-4.7) mm wide (usually > 2.5 mm wide); keels of first glume scabrous only above the middle, smooth below.
 - 13 Inflorescences oblong to obpyramidal; spikelets (3.8-) 4.1-4.4 (-5.0) mm long; anthers usually not marcescent within spikelet; mature peduncles (4-) 11-35 (-60) mm long (usually some of them > 10 mm long)..... *A. glomeratus* var. *glomeratus*
 - 13 Inflorescences (linear to) oblong; spikelets (3.4-) 3.6-3.8 (-4.6) mm long; anthers usually marcescent within spikelets; peduncles (2-) 3-5 (-8) mm long..... *A. glomeratus* var. *hirsutior*
 - 11 Culm sheaths not scabrous (often hirsute); leaf blades < 35 cm long (except in *A. glomeratus* var. *pumilus*).
 - 14 Leaves glabrous.
 - 15 Ligules (0.8-) 1.1 (-1.5) mm long, with ciliations 0-0.1 mm long; basal leaves often filiform, < 1.5 mm wide, strongly erect..... *A. perangustatus*
 - 15 Ligules (0.2-) 0.5 (-0.8) mm long, with ciliations 0.2-1.3 mm long; basal leaves usually > 2 mm wide, soon arching.
 - 16 Culm internodes green (or glaucous just below the node only); raceme sheaths (2.2-) 2.5-3.8 (-4.5) cm long, (1.7-) 2.4-3.1 (-4.0) mm wide; peduncles (1-) 4-9 (-30) mm long; racemes 2 (-3) per inflorescence unit..... *A. virginicus* var. *decipiens*
 - 16 Culm internodes glaucous; raceme sheaths (2.8-) 3.3-4.7 (-6.7) cm long, (3.0-) 3.2-3.8 (-5.2) mm wide; peduncles (2-) 3-4 (-6) mm long; racemes 2-4 (-7) per inflorescence unit, at least some inflorescence units (especially at culm and branch apices) with 3 or more racemes..... *A. virginicus* var. *virginicus* ['smooth variant']
 - 14 Leaves pubescent, at least on the margin near the collar.
 - 17 Keels of first glume often scabrous below the middle; leaves usually > 44 cm long..... *A. tenuispatheus*
 - 17 Keels of first glume scabrous only above middle; leaves usually < 31 cm long.
 - 18 Pubescence of young culm sheaths appressed; spikelets usually > 4 mm long; hairs on rachis internode and sterile pedicel dense, long; callus hairs 1.5-5 mm long..... *A. longiberbis*
 - 18 Pubescence of young culm sheaths spreading; spikelets mostly < 4 mm long; hairs on rachis internode and sterile pedicel rather sparse and short; callus hairs 1-2.5 mm long.
 - 19 Raceme sheaths (2.2-) 2.5-3.8 (-4.5) cm long, (1.7-) 2.4-3.1 (-4.0) mm wide; racemes 2 (3) per inflorescence unit; spikelets (3.0-) 3.3-3.6 (-4.0) mm long..... *A. virginicus* var. *decipiens*
 - 19 Raceme sheaths (2.3-) 3.4-5.2 (-6.7) cm long, (2.7-) 3.3-4.0 (-5.5) mm wide; racemes 2-5 (-7) per inflorescence unit; spikelets (2.9-) 3.7-3.9 (-4.7) mm long..... *A. virginicus* var. *virginicus*
- 10 Postflowering peduncles > 15 mm long.
 - 20 Culm sheaths antrorsely scabrous (often hirsute as well).
 - 21 Ligules (1.0-) 1.2 (-2.0) mm long, with ciliations 0-0.3 mm long; keels of first glume scabrous only above middle..... *A. glomeratus* var. *glomeratus*
 - 21 Ligules (0.6-) 0.8 (-1.3) mm long, with ciliations 0.2-0.9 mm long; keels of first glume often scabrous below middle.....

- *A. tenuispatheus*
- 20 Culm sheaths not scabrous (often hirsute).
- 22 Culms < 1.2 m tall; leaf blades < 30 cm long and < 3 mm wide; inflorescence units rarely > 20/culm.
- 23 Raceme sheaths (2.2-) 2.5-3.8 (-4.5) cm long; spikelets (3.0-) 3.3-3.6 (-4.0) mm long; leaf blades (2.5-) 3.6 (-5.5) mm wide..... *A. virginicus* var. *decipiens*
- 23 Raceme sheaths (2.6-) 4.1-6.6 (-8.5) cm long; spikelets (3.0-) 3.4-5.1 (-5.5) mm long; leaf blades (0.8-) 1.8 (-3.0) mm wide.
- 24 Ligules (0.8-) 1.1 (-1.5) mm long, with ciliations 0-0.1 mm long..... *A. perangustatus*
- 24 Ligules (0.2-) 0.4 (-0.5) mm long, with ciliations (0.1-) 0.2-0.8 mm long..... *A. tracyi*
- 22 Culms usually > 1.2 m tall; leaf blades often > 30 cm long and > 3 mm wide; inflorescence units usually > 20/culm.
- 25 Inflorescence branches arching outwards in pronounced curves; awn mostly < 1 cm long; spikelets (4.1-) 4.4-4.6 (-5.0) mm long; anther > 1.7 mm long..... *A. brachystachyus*
- 25 Inflorescence branches erect; awn mostly > 1 cm long; spikelets (3.0-) 3.3-3.8 (-4.5) mm long; anther < 1.5 mm long.
- 26 Raceme sheaths (1.5-) 2.0-2.5 (-3.0) mm wide; keels of first glume often scabrous below middle; culms to 2.5 m tall; leaves to 109 cm long and 9.5 mm wide..... *A. tenuispatheus*
- 26 Raceme sheaths (1.7-) 2.4-3.1 (-4.0) mm wide; keels of first glume scabrous only above middle; culms < 1.7 m tall; leaves < 35 cm long and 5.5 mm wide..... *A. virginicus* var. *decipiens*

Andropogon arctatus Chapman, Florida Bluestem. Cp (FL, NC*): moist disturbed ground; rare, apparently native of farther south (NC Watch List). This curious record from Pamlico County, NC (the specimen at GH, collected by Randolph and Randolph in 1922, annotated as *A. arctatus* by Campbell) is likely a waif. The species is native to pinelands from n. FL west to w. panhandle of FL and adjacent s. AL, south to s. FL. [= FNA, HC, K, S, Z]

Andropogon brachystachyus Chapman, Shortspike Bluestem. Cp (FL, GA, SC): moist to wet pinelands, natural pond margins, bogs, disturbed roadsides; rare (GA Special Concern). Se. SC (McMillan et al. 2002) south to FL, south to s. FL, west to e. FL Panhandle. *A. brachystachyus* is considered by some to range north to NC. [= FNA, K, Z; = *A. brachystachyus* – GW, HC, S, orthographic variant]

Andropogon capillipes Nash var. *1*, Wetland White Bluestem. Cp (FL, GA, NC, SC, VA): wet savannas, ditches adjacent to savannas, depressional wetlands; common. September-October. S. NJ south to s. FL and west to e. TX; also in the Bahamas (Sorrie & LeBlond 1997). Campbell (1983) informally describes two "variants" of this species (which he treats at the varietal level, as *A. virginicus* var. *glaucus*). *A. capillipes* is clearly a species distinct from *A. virginicus*; moreover, the substantial morphological and ecological differences between Campbell's two "variants" (which he describes as nearly always sharply distinct, even when growing in close proximity) warrant recognition as good species, or at least as varieties. [*A. virginicus* – RAB; < *A. virginicus* var. *glaucus* Hackel – F, FNA; < *A. capillipes* – GW, HC, K, S; = *A. virginicus* var. *glaucus* "wetlands variant" – Z; = *A. virginicus* var. *dealbatus* Mohr ex Hackel]

Andropogon capillipes Nash var. *2*, Dryland White Bluestem. Cp (FL, GA, NC, SC): dry to mesic pine flatwoods, sandhills, adjacent roadbanks; uncommon. September-October. Se. NC south to s. FL and west to s. AL. See *A. capillipes* var. *1* for discussion of these two taxa. The type of *A. capillipes* (collected by A.H. Curtiss in FL) is of this taxon; Nash (1900) states that it occurs "in dry soil, North Carolina to Florida" and emphasizes that it is "abundantly distinct from *A. virginicus*, to which it is related." [*A. virginicus* – RAB; < *A. virginicus* var. *glaucus* Hackel – F, FNA; < *A. capillipes* – GW, HC, K, S; = *A. virginicus* var. *glaucus* "drylands variant" – Z]

Andropogon eliottii Chapman. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Ip (KY): dry to moist forests, woodlands, fields, and disturbed areas; common (uncommon in Mountains and Interior Low Plateau). September-October. Widespread in se. United States, from s. NJ west to s. IN, s. IL, s. MO, south to s. FL and TX. Campbell (1983) argued that the name *A. eliottii* should be replaced by *A. gyrans*; Ward (2004c) argues for retention of the traditional *A. eliottii*. [= HC, WV; > *A. eliottii* – RAB, S; > *A. campyloracheus* Nash – RAB, S; = *A. gyrans* Ashe – C, W; = *A. gyrans* var. *gyrans* – FNA, K, Z; > *A. eliottii* var. *elliottii* – F, G; > *A. eliottii* var. *gracilior* Hackel – F, G; > *A. eliottii* var. *projectus* Fernald & Griscom – G]

Andropogon floridanus Scribner, Florida Bluestem. Cp (FL, GA): longleaf pine sandhills; rare. September-October. S. GA west to FL Panhandle, south to s. FL. Reported for e. and s. GA (FNA, Jones & Coile 1988). [= FNA, HC, K, S] {not yet keyed}

Andropogon gerardii Vitman, Big Bluestem, Turkeyfoot. Cp (FL, GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), IP (KY): in a wide variety of habitats, usually rather dry, such as sandhills, glades, cliffs, and rock outcrops, in the Piedmont in woodlands, former prairie-like sites, woodlands, open forests, and river-scour grasslands, in the Mountains in glades, riverside scour areas, and rarely in grassy balds, ascending to at least 1600 m over mafic rocks (on Old Field Bald, Watauga and Ashe counties, NC); common (rare in VA Coastal Plain, rare in KY Mountains). July-October. Québec west to Saskatchewan, south to FL and AZ. Some favor treating *A. hallii* Hackel as a subspecies of *A. gerardii* (Wipff 1996c). I do not agree, but if that course is followed, then our eastern taxon should be known as *A. gerardii* ssp. *gerardii*. [= RAB, C, FNA, G, GW, HC, K, W; > *A. gerardii* var. *gerardii* – F; = *A. provincialis* Lamarck – S; = *A. gerardi* – WV, orthographic variant]

Andropogon glaucopsis Elliott, Chalky Bluestem. Cp (FL, GA, NC, SC, VA): wet savannas, pine flatwoods, ditches, wet disturbed sites; uncommon (rare in VA). September-October. Se. VA south to c. peninsular FL and west to e. TX. The extent of the western Gulf Coastal Plain distribution (to the West Gulf Coastal Plain of w. LA and e. TX) is based on specimens (at BRIT) and sight records (B. Sorrie, pers. comm.). Although sometimes included in the past in either *A. glomeratus* or *A. virginicus*, this species is distinctive and easily recognized in the field (even from a car at 60 m.p.h.) by the combination of blue color, height of well over 1 m (taller than the other glaucous bluestems), and semi-bushy inflorescence. [= GW, K; < *A. virginicus* – RAB; = *A. virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – F, HC; = *A. glomeratus* var. *glaucopsis* (Elliott) A.S. Hitchcock – FNA, Z; < *A. glomeratus* – S]

Andropogon glomeratus (Walter) Britton, Sterns, & Poggenburg var. *glomeratus*. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Ip (KY): swamps, wet savannas, pine flatwoods, wet disturbed sites; common (rare in

KY). September-October. S. MA south to c. peninsular FL and west to s. MS, primarily on the Coastal Plain, but scattered inland to w. PA, WV, c. KY, c. TN and AR. [= FNA, K, Z; < *A. virginicus* – RAB; = *A. virginicus* var. *abbreviatus* (Hackel) Fernald & Griscom – C, F, G, GW, WV; < *A. glomeratus* – HC, S, W]

Andropogon glomeratus (Walter) Britton, Sterns, & Poggenburg var. ***hirsutior*** (Hackel) C. Mohr. Cp (FL, GA, NC, SC, VA), Ip (KY): wet savannas, pine flatwoods, adjacent ditches, other wet disturbed sites; common. September-October. E. MD south to c. peninsular FL west to se. LA. This taxon should be recognized at the specific level, but the appropriate combination has not been made. [= FNA, K, Z; < *A. virginicus* – RAB; ? *A. virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – G, misapplied; = *A. virginicus* var. *hirsutior* (Hackel) A.S. Hitchcock; < *A. glomeratus* – HC, S]

Andropogon longiberbis Hackel, Longbeard Bluestem. Cp (FL, GA, NC, SC): dry sandy soils of sandhills and dunes; uncommon (rare north of FL). September-October. Se. NC south to s. and w. FL, and in the Bahamas. [= FNA, HC, K, S, Z]

Andropogon mohrii (Hackel) Hackel ex Vasey, Tawny Bluestem, Bog Bluestem. Cp (FL, GA, NC, SC, VA): wet savannas, sphagnum bogs; rare. September-October. Se. VA south to n. FL, west to LA. [= RAB, C, F, G, GW, HC, K, S; = *A. liebmannii* Hackel var. *pungensis* (Ashe) C.S. Campbell – FNA, Z]

Andropogon perangustatus Nash, Narrow-leaved Bluestem. Cp (FL, GA, NC, SC, VA), Pd? (VA?): clay-based Carolina bays and boggy wetlands; rare. August-October. E. VA south to c. peninsular FL, east to e. TX. Growth form, general appearance, and habitat (dense bluish tussocks with very narrow leaves and long ligules, growing in wet areas such as clay-based Carolina bays) make *A. perangustatus* readily recognizable. [= HC, S; = *A. gyrans* Ashe var. *stenophyllus* (Hackel) C.S. Campbell – FNA, K, Z; = *A. elliottii* Chapman var. *stenophyllus* (Hackel) D.B. Ward]

Andropogon tenuispathus (Nash) Nash. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): maritime wet grasslands, brackish marsh edges, moist disturbed sites; common (uncommon in VA). September-October. Se. VA and c. OK south to s. FL and w. TX, also south into Central America and the Caribbean. [< *A. virginicus* – RAB; = *A. glomeratus* (Walter) Britton, Sterns, & Poggenburg var. *pumilus* Vasey ex Dewey – FNA, K, Z ("robust variant"); < *A. glomeratus* – HC, S]

Andropogon ternarius Michaux var. ***ternarius***, Splitbeard Bluestem. Cp (FL, GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Ip (KY), Mt (GA, NC, SC, VA): dry to moist soils; common (uncommon in Mountains). September-October. Var. *ternarius* ranges from DE west to KY and s. MO, south to FL and TX. Var. *cabanisii* (Hackel) Fernald & Griscom is endemic in s. and c. peninsular FL. [= FNA, K, Z; < *A. ternarius* – RAB, C, G, W; > *A. ternarius* var. *ternarius* – F; > *A. ternarius* var. *glaucescens* (Scribner) Fernald & Griscom – F; = *A. ternarius* – HC, S]

Andropogon tracyi Nash, Tracy's Bluestem. Cp (FL, GA, NC, SC), Pd (GA, NC, SC): dry sandy or clayey soils of sandhills, disturbed sites; rare. September-October. E. NC south to s. FL and west to MS. [= FNA, HC, K, S, Z]

Andropogon virginicus Linnaeus var. ***decipiens*** C.S. Campbell, Deceptive Bluestem. Cp (FL, GA, NC, SC, VA), Ip (KY): savannas, flatwoods, maritime wet grasslands, disturbed pinelands; uncommon (rare in KY and VA). September-October. Se. VA south to s. FL and west to w. FL; also in the Bahamas (Sorrie & LeBlond (1997)). [= FNA, K, Z (1986); < *A. virginicus* – RAB, S; < *A. virginicus* var. *virginicus* – F, G, HC; = *A. virginicus* var. *virginicus* – Z (1983 – "deceptive variant")]

Andropogon virginicus Linnaeus var. ***virginicus***, Old-field Broomstraw, Broomsedge, "Sedge Grass", "Sage Grass". Cp (FL, GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Ip (KY): old fields, roadbanks, disturbed sites; common. September-October. Widespread, from MA west to MI and e. KA, south to FL and e. TX, and in the Caribbean and Central America. Campbell (1983) recognized 3 "variants" within *A. virginicus* var. *virginicus*; the "deceptive variant" he later (1986) described formally as var. *decipiens* (see above). The "old-field variant" is the common "variant" in our area, occurring abundantly throughout the state. It has green stem internodes and the leaves usually pubescent, at least on the margins near the collar. The "smooth variant" is known only from the Coastal Plain and is apparently rare in our area, known from NC and SC (Berkeley and Marion counties; P. McMillan, pers. comm.). It has glaucous stem internodes and glabrous leaves. It is unclear whether the "smooth variant" warrants taxonomic recognition. [= FNA, K, Z ("oldfield variant" and "smooth variant"); < *A. virginicus* – RAB, S, W; < *A. virginicus* var. *virginicus* – C, WV; < *A. virginicus* var. *virginicus* – G, HC (also see var. *decipiens*); >> < *A. virginicus* var. *virginicus* – F; > *A. virginicus* var. *tetrastachyus* (Elliott) Hackel – F]

Anthenantia Palisot de Beauvois 1812 (Silkyscale)

A genus of 3 species, of se. North America (or 4-5 species of se. North America and tropical America, if *Leptocoryphium* is included in *Anthenantia*). Clayton & Renvoize (1986) state that "*Anthenantia* is the etymologically correct version of three alternative spellings given by Beauvois." References: Wipff in FNA (2003a); Crins (1991)=Z; Kral (2004)=Y; Clayton & Renvoize (1986).

- 1 Leaves weakly if at all geniculate and auriculate at junction of blade and sheath, ascending to erect (lacking a sharp bend outward at the summit of the sheath), medium green; blade (3-) 4-8 (-10) mm wide, the proximal margins glabrous or sometimes ascending pilose-ciliate; pigmentation of leaves, spikelets and their trichomes variously reddish or purplish; fertile lemma red-brown to nearly black, leaf tip with a very short taper to a blunt or rounded apex; lower sheaths crowded and keeled (therefore distichous) ***A. rufa***
- 1 Leaves strongly geniculate and auriculate at junction of blade and sheath, spreading, usually squarrose (with a sharp bend outward at the summit of the sheath), yellowish green; blade 4-10 (-15) mm wide, the proximal margins ciliate at least basally with ascending strumose-hirsute cilia; pigment of leaves, spikelets and their trichomes usually with little or any red; fertile lemma brown; leaf tip with a long taper to a sharp apex; lower sheaths not crowded, keeled, or distichous ***A. villosa***

Anthenantia rufa (Nuttall) J.A. Schultes, Purple Silkyscale. Cp (FL, GA, NC, SC): wet savannas in the outer Coastal Plain, seepage bogs and moist sandhill-pocosin ecotones in the fall-line sandhills; rare (NC Watch List, SC Rare). September-October. Se. NC south to n. FL and west to w. LA. *A. rufa* inhabits much wetter habitats than the similar *A. villosa*, and is more

typical of the outer Coastal Plain. Plants without culms are reminiscent of the Liliaceae. [= FNA, Y; = *Anthaenantia rufa* – RAB, GW, HC, K, S, Z, orthographic variant]

Anthaenantia villosa (Michaux) Palisot de Beauvois, Green Silkyscale. Cp (FL, GA, NC, SC): sandhills, especially in submesic swales; uncommon (rare in the outer Coastal Plain). September-October. Se. NC south to s. FL and west to e. TX. *A. villosa* is found in drier habitats than *A. rufa*, most typically in upland swales in the sandhills. Kral (2004) has segregated a new species, *A. texana* Kral, of the w. Gulf Coastal plain, previously confused with *A. villosa*. [= Y; < *Anthaenantia villosa* – RAB, HC, K, S, Z, orthographic variant; < *Anthaenantia villosa* – FNA]

Anthoxanthum Linnaeus 1753 (Vernal Grass)

A genus of about 50 species (as here circumscribed to include *Hierochloe*), perennials and annuals, of temperate, boreal, and arctic regions. Tucker (1996), Sorong et al. (2003), and Allred & Barkworth in FNA (2007a) all include *Hierochloe* into a more broadly circumscribed *Anthoxanthum*. References: Allred & Barkworth in FNA (2007a); Tucker (1996)=Z; Sorong et al. (2003)=Y.

- 1 Glumes subequal; lowest 2 florets staminate *A. hirtum*
- 1 Glumes unequal, the lower shorter than the upper; lowest 2 florets sterile.
 - 2 Annual, geniculate; ligules 0.5-2 mm long; glumes glabrous; leaves 1-2 mm wide *A. aristatum*
 - 2 Perennial, erect; ligules (1-) 2-3 mm long; glumes villous throughout or at least on the keel; leaves 2-5 mm wide *A. odoratum*

* *Anthoxanthum aristatum* Boissier, Annual Vernal Grass. Cp (FL, NC, SC, VA), Pd (VA), Mt (VA): roadsides, disturbed areas; rare, native of Europe. April-June. [= RAB, C, FNA, G, HC, K, S, WH, Z; = *A. puelii* Lecoq & Lamotte – F, WV]

Anthoxanthum hirtum (Schrank) Y. Schouten & Veldkamp, Holy Grass, Sweet Grass, Vanilla Grass. Mt (NC, VA): fens, wet calcareous meadows, high elevation pastures and openings; rare. April-May. A circumboreal species and subspecies, widespread in n. Eurasia and n. North America, ranging south in North America to NJ, MD, PA, OH, IN, IL, IA, SD, CO, UT, NM, and CA, with several disjunct occurrences in North Carolina, in Long Hope Valley, Ashe County, the Nantahala River Bogs, Macon County, and Pond Mountain, Ashe County. The report by S ("recorded by Chapman from Statesville, N.C.") can be discounted; the record reflects a collection made in the mountains by Mordecai E. Hyams, a botanist and herb trader based in Statesville. Belden et al. (2004) document the first occurrence in Virginia. The sweet, vanilla-like odor of this grass is responsible for various folk uses – by Native Americans for making fragrant baskets, in Scandinavia strewn on church floors on festival days. [= FNA; < *Hierochloe odorata* (Linnaeus) Palisot de Beauvois – C, F, G, HC, WV; > *H. hirta* (Schrank) ssp. Borbás ssp. *arctica* (J. Presl) G. Weimarck – K; < *Torresia odorata* (Linnaeus) A.S. Hitchcock – S; < *Anthoxanthum nitens* (Weber) Y. Schouten & Veldkamp – Z; ? *Anthoxanthum nitens* (Weber) Y. Schouten & Veldkamp spp. *nitens* – Y; > *H. odorata* var. *fragrans* (Willdenow) Richter (the North American plants)]

* *Anthoxanthum odoratum* Linnaeus, Sweet Vernal Grass Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC, VA): lawns, roadsides, disturbed areas; common, native of Europe. April-June. *A. odoratum* is a familiar grass of suburban areas and roadsides, and its pollen is known as a major cause of spring hay fever. From a letter from Charles Darwin to J.D. Hooker, in June 1855: "Have just made out my first grass, hurrah! hurrah! I must confess that fortune favours the bold, for, as good luck would have it, it was the easy *Anthoxanthum odoratum*: nevertheless it is a great discovery; I never expected to make out a grass in all my life, so hurrah! It has done my stomach surprising good..." [= RAB, C, F, FNA, G, HC, S, W, WV, Z; = *A. odoratum* ssp. *odoratum* – K]

Apera Adanson 1763 (Windgrass)

A genus of 3 species, of temperate Europe and w. Asia. References: Allred in FNA (2007a).

* *Apera spica-venti* (Linnaeus) Palisot de Beauvois, Common Windgrass. Reported for se. PA (Rhoads & Klein 1993), MD, and KY (Kartesz 1999). [= FNA, K]

Aristida Linnaeus 1753 (Three-awn Grass)

A genus of about 250-300 species, widespread in the tropics, subtropics, and warm temperate zones. References: Allred in FNA (2003a); Allred (1986)=Z; Allred (1984, 1985); Peet (1993)=Y; Ward (2001)=X; Henrard (1929)=Q; Kesler, Anderson, & Hermann (2003)=V. Key adapted, in part, from Z.

Identification notes: The awns must be dry and relatively mature to assume their characteristic positions (immature awns and moist mature awns are erect and parallel). It is sometimes useful to dry a collection unpressed. Beware, however, that drying followed by dispersal can take place very quickly under the right conditions (such as the dashboard of a hot car)!

- 1 Plant a perennial, forming dense tussocks, the leaves primarily basal, usually very numerous, mostly > 3 dm long, 0.5-1.5 mm wide, almost always tightly involute; flowering only in the growing season following fire.
- 2 Base of blade and collar (and often the upper sheath) with conspicuous tuft or bearding of woolly to villous pubescence (sometimes deciduous on foliage more than a year old); leaves usually glabrous above the basal 2 cm of the blade; [of s. SC south] *A. beyrichiana*

- 2 Base of blade, collar, and upper sheath lacking a conspicuous tuft of woolly to villous pubescence; leaves with 2 lines of villous pubescence on either side of the midrib on the lower surface extending nearly or entirely the length of the blade (sometimes deciduous on foliage more than a year old); [of n. SC and NC] *A. stricta*
- 1 Plant an annual or perennial, forming small tufts (or solitary), the leaves primarily cauline, usually few, mostly < 3 dm long (if as long as 3 dm then > 2 mm wide), flat to slightly folded, but not wiry; flowering not strongly triggered by fire.
- 3 First glume 3-7 nerved.
- 4 Central awn of the lemma (8-) 12-65 (-70) mm long, the lateral awns as long or nearly so *A. oligantha*
- 4 Central awn of the lemma (9-) 12-25 (-30) mm long, the lateral awns 1-4 mm long (or even lacking) *A. ramosissima*
- 3 First glume 1-2-nerved.
- 5 Central awns spirally coiled at the base (above the awn column), like a corkscrew, ½ to 3 full turns (when dry).
- 6 Lateral awns 5-13 mm long, spreading *A. basiramea*
- 6 Lateral awns 1-4 mm long, erect
- 7 First glume 1/2 to 2/3 as long as the second glume; lemma 6-11 mm long, glabrous to scaberulous *A. curtisii*
- 7 First glume as long as or nearly as long as the second glume; lemma 3-8 mm long, sparsely appressed-pubescent *A. dichotoma*
- 5 Central awns straight to curved (or contorted at the base).
- 8 Lateral awns < ½ as long as the central awn.
- 9 Inflorescences 15-25 cm wide; loosely caespitose perennial, unbranched upwards *A. patula*
- 9 Inflorescences 1-6 cm wide; annuals, much branched above the base.
- 10 Awns flattened at the base *A. adscensionis*
- 10 Awns terete at the base.
- 11 Lemmas 8-22 mm long; central awn curved ca. 180 degrees at the base *A. ramosissima*
- 11 Lemmas 2.5-10 mm long; central awn curved ca. 90 degrees at the base.
- 12 Central awn (8-) 12-27 mm long; lateral awns (1-) 6-18 mm long *A. longespica* var. *geniculata*
- 12 Central awn mostly 1-10 (-14) mm long; lateral awns 0-5 (-8) mm long *A. longespica* var. *longespica*
- 8 Lateral awns > ½ as long as the central awn.
- 13 Sheaths lanose or floccose (the hairs kinked and intertwined); nodes of the panicle axis with tufts of lanose or floccose hairs *A. lanosa*
- 13 Sheaths glabrous to pilose (the hairs straight and usually appressed, not intertwined); nodes of the panicle axis glabrous or pilose.
- 14 Awn column (the connivent awns twisted together) or lemma beak (slender, narrowed, and twisted portion of lemma body below the awns) 7-30 mm long; lemma body (including the beak, if present) separated from the awns (or awn column) by an articulation zone, the awns (or awn column) disarticulating at maturity from the lemma.
- 15 Panicle spiciform, broadest near the middle, dense, the spikelets overlapping strongly; awns (10-) 20-30 mm long, borne at the summit of a twisted lemma beak 7-30 mm long; culms simple or with very few branches; plants perennial *A. spiciformis*
- 15 Panicle almost corymbiform, broadest above the middle, open, the spikelets overlapping only slightly; awns 30-40 mm long, not including the 8-15 mm long column formed by the twisting together of the 3 awn bases; culms often much-branched; plants annual *A. tuberculosa*
- 14 Awn column or lemma beak absent or < 7 mm long; lemma body not separated from the awns by an articulation zone.
- 16 Main lower branches of the panicle divergent from the culm and with pulvini *A. purpurea* var. *longiseta*
- 16 Main lower branches of the panicle (or pedicels in racemose species) ascending to appressed and lacking pulvini.
- 17 Plants with thick rhizomes; basal sheaths shredding into persistent fibers; [of wet pine flatwoods of FL] *A. rhizomorpha*
- 17 Plants tufted, not rhizomatous; basal sheaths not shredding into persistent fibers; [collectively of various habitats].
- 18 Spikelets borne singly at each node of the main axis, the inflorescence thus a spike or raceme *A. mohrii*
- 18 Spikelets 2 or more per node of the main axis at most nodes (a few nodes may have single spikelets), often with side branches present as well, the inflorescence thus a panicle (less commonly a raceme).
- 19 First glume 1/3-¾ the length of the second glume *A. gyrans*
- 19 First glume > ¾ the length of the second glume.
- 20 Central awn 15-40 mm long; first glume prominently 2-keeled, (8-) 9-14 mm long when mature *A. palustris*
- 20 Central awn 8-25 mm long; first glume either 1-keeled and 6-14 mm long, or weakly 2-keeled and 5.5-9 (-10) mm long when mature.
- 21 Central awn about 2× as thick as the lateral awns, divergent to reflexed; first glume 1-keeled or weakly 2-keeled; [plants of moist to wet habitats].
- 22 Basal internode of the culm 0.3-0.6 mm wide; most nodes of the inflorescence with 1-2 spikelets; all awns spreading, the central spirally twisted basally and often contorted by as much as 180 degrees (best seen in fresh material); central awn 15-20 mm long, lateral awns 11-16 mm long, the ratio of the lateral:central awn length 0.69-0.80; lemma callus beard 0.6-1.0 mm long *A. simpliciflora*
- 22 Basal internode of the culm 0.7-1.2 mm wide; most nodes of the inflorescence with 3 or more spikelets; central awn spreading to slightly deflexed, not spirally twisted basally, the lateral awns ascending to erect (best seen in fresh material); central awn 13-22 mm long, lateral awns 8-15 mm long, the ratio of the lateral:central awn length 0.55-0.69; lemma callus beard 0.2-0.6 mm long *A. virgata*
- 21 Central awn < 1.5× as thick as the lateral awns, erect to divergent; first glume 1-keeled (rarely weakly 2-keeled); [plants of dry habitats].
- 23 Culms mostly > 10 dm tall and 3-6 mm in diameter near the base; awns 8-15 mm long; panicle branches > 4 cm long; callus ca. 1.0 mm long *A. condensata*
- 23 Culms 5-8 (-10) dm tall and 1-4 mm in diameter near the base; awns 12-25 mm long; panicle branches 1-4 cm long; callus 0.4-0.8 mm long.
- 24 First glume 1-4 mm longer than the second glume (rarely about equal to it); awns 15-25 mm long, straight or slightly contorted at the base; leaf blades 1-3 mm wide, usually curling *A. purpurascens*
- 24 First glume shorter than or about equal to the second glume; awns 12-18 mm long, spirally contorted at the base; leaf blades about 1 mm wide, usually not curling *A. tenuispica*

* *Aristida adscensionis* Linnaeus, Sixweeks Three-awn. Pd (SC): {habitat in our area unknown}; rare, native of w. United States. Reported for SC (FNA). {further investigate} [= F, FNA, G, HC, K]

Aristida basiramea Engelman ex Vasey, Forktip Three-awn. Cp (SC, VA): sandy soils; rare, probably introduced, native of mw. United States. ME and Ontario south to SC (FNA), FL (Wunderlin & Hansen 2003), AL, TX, and CO (FNA). [= F, FNA, G, HC, K; = *A. basiramea* var. *basiramea* – C] {FL}

Aristida beyrichiana Trinius & Ruprecht, Southern Wiregrass. Cp (FL, GA, SC): sandhills, savannas, from very dry to seasonally saturated soils; common. September–November. S. SC south to s. FL, west to s. MS. See Peet (1993) for discussion of the taxonomy and ecology of this species; also see comments under *A. stricta*, which also apply here. Ward (2001) proposes varietal status for *A. stricta* and *A. beyrichiana*. [= K, Y; < *A. stricta* – RAB, FNA, GW, HC, S, V, Z; = *A. stricta* Michaux var. *beyrichiana* (Trinius & Ruprecht) D.B. Ward – X]

Aristida condensata Chapman, Big Three-awn. Cp (FL, GA, NC, SC): dry sandy soils of sandhills; rare (NC Watch List, SC Rare). August–October. Sc. NC south to s. FL, west to s. MS (Sorrie & Leonard 1999). [= RAB, FNA, HC, K, S, Z]

Aristida curtissii (A. Gray ex S. Watson & Coulter) Nash, Curtiss's Three-awn. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA): roadsides, disturbed areas, bare eroding soil; uncommon (rare in VA Mountains). August–October. ME west to WY, south to FL, AR, OK, and CO, perhaps largely or entirely adventive in our area. See Z for a discussion of the rationale for reducing *A. curtissii* to a variety of *A. dichotoma*. C reduces it to a variety of the more western *A. basiramea* Engelman ex Vasey. For now, and for simplicity, I prefer to retain the two as species. [= RAB, G, HC, S; = *A. basiramea* Engelman ex Vasey var. *curtissii* (A. Gray ex S. Watson & Coulter) Shinnery – C; = *A. dichotoma* Michaux var. *curtissii* A. Gray – F, FNA, K, W, WV, Z]

Aristida dichotoma Michaux, Fork-tip Three-awn. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides, fields, disturbed areas, bare eroding soil; common. August–October. ME west to WI, south to FL and TX. See *A. curtissii* for comments. [= RAB, C, G, HC, S; = *A. dichotoma* var. *dichotoma* – F, FNA, K, W, WV, Z]

Aristida gyrans Chapman, Corkscrew Three-awn. Cp (FL, GA): dry pinelands; rare (GA Special Concern). E. GA and w. Panhandle FL, south to s. FL. In Bryan, Long, and Montgomery counties in e. GA (Sorrie 1998b), and in wc. GA (J. Allison, pers. comm.). [= FNA, HC, K, S]

Aristida lanosa Muhlenberg ex Elliott, Woollysheath Three-awn. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): dry sandy soils of sandhills and fields; common, rare in Piedmont (rare in VA Coastal Plain). August–October. NJ south to FL, west to TX, north in the interior to MO and OK. [= RAB, C, FNA, G, HC, K, S, WV, Z; > *A. lanosa* var. *lanosa* – F; *A. lanosa* var. *macera* Fernald & Griscom – F]

Aristida longespica Poiret var. *geniculata* (Rafinesque) Fernald, Eastern Slim-spike Three-awn. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC, VA): disturbed areas; common? August–October. The distribution and habitats of the 2 varieties in our area are poorly known, pending further field and herbarium investigation. [= C, F, FNA, HC, K, Z; < *A. longespica* – RAB, W, WV; > *A. intermedia* Scribner & Ball – F, G, S; > *A. longespica* – G]

Aristida longespica Poiret var. *longespica*, Eastern Slim-spike Three-awn. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC, VA): disturbed areas; uncommon? August–October. The distribution and habitats of the 2 varieties in our area are poorly known, pending further field and herbarium investigation. [= C, F, FNA, HC, K, Z; < *A. longespica* – RAB, G, W, WV; = *A. longespica* – S]

Aristida mohrii Nash, Mohr's Three-awn. Cp (AL, FL, GA, SC): sandhills; rare. August–October. Panhandle FL and sw. GA west to s. AL; apparently disjunct in SC (Chesterfield and Richland counties). [= FNA, HC, K, S, Z]

Aristida oligantha Michaux, Prairie Three-awn. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides, fields, disturbed areas; common (uncommon in VA Mountains). August–October. VT west to SD, south to FL and TX, scattered elsewhere as a weed. [= RAB, C, F, FNA, G, HC, K, S, W, WV, Z]

Aristida palustris (Chapman) Vasey, Longleaf Three-awn. Cp (FL, GA, NC, SC): wet pine savannas, limesink depressions; uncommon. August–October. Se. NC south to FL, west to TX; apparently disjunct on the Cumberland Plateau of KY. [= C, FNA, K, S, Z; = *A. affinis* (Schultes) Kunth – RAB, F, G, GW, HC, misapplied]

Aristida patula Chapman ex Nash, Tall Three-awn. Cp (FL): dry to moist sandy soils of pond margins, pinelands, dunes; rare. Endemic to FL Panhandle (Dixie, Franklin, Gadsden, Leon, Taylor, and Wakulla counties) (Wunderlin & Hansen 2006) and peninsula. [= FNA, GW, HC, K, S]

Aristida purpurascens Poiret, Arrowfeather. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): dry habitats, especially in dry sandy soils; common. August–October. MA west to WI and KS, south to FL and TX. In the Sandhills occurring in two forms, one green, the other strongly glaucous-blue. [= RAB, C, G, HC, S, W, WV; > *A. purpurascens* var. *purpurascens* – F; > *A. purpurascens* var. *minor* Vasey – F; = *A. purpurascens* var. *purpurascens* – FNA, K, Z]

* *Aristida purpurea* Nuttall var. *longiseta* (Steudel) Vasey, Red Three-awn. Cp (SC): disturbed areas; rare, adventive from further west. August–October. Also reported from NC, but the collection is from a Soil Conservation Service test nursery, and there is no evidence of naturalization. [= C, FNA, K, Z; > *A. longiseta* var. *robusta* Merrill – F; = *A. longiseta* Steudel – G, HC]

Aristida ramosissima Engelman ex A. Gray. Cp (FL): pine flatwoods; rare. East to Panhandle FL (Bay County) (Wunderlin & Hansen 2004), c. TN, and e. KY (FNA). [= C, F, FNA, G, HC, K, S]

Aristida rhizomorpha Swallen, Florida Three-awn. Cp (FL): wet pine flatwoods; rare. FL endemic, north to Baker, Duval, and Nassau counties. [= FNA, HC, K]

Aristida simpliciflora Chapman, Southern Three-awn, Chapman's Three-awn, Southern Three-awn. Cp (FL, GA, NC): wet pine savannas; rare (GA Special Concern, NC Rare). Sw. GA west through the FL Panhandle and c. AL to s. MS (Sorrie & Leonard 1999), and south into central Peninsular Florida; also in se. NC, where apparently disjunct (it should be searched for in SC). *A. simpliciflora* was believed to be a Gulf Coastal Plain endemic until found by R. LeBlond in 1999 in wet savannas in se. NC (Green Swamp savannas, Brunswick County; Old Dock Savanna, Columbus County; and The Neck Savanna, Pender County). It is reported for sw. GA (Jones & Coile 1988, Kartesz 1999). Harper also reports it for c. GA. [= FNA, HC, K, S, Z]

Aristida spiciformis Elliott, Bottlebrush Three-awn, Spike Three-awn. Cp (FL, GA, NC?, SC): wet pine savannas and seepage areas; rare (NC Watch List). August–October. E. SC (McMillan et al. 2002) south to FL, west to MS. Allred (1986) also reports this species from NC, but the documentation is unknown to me. [= RAB, FNA, GW, HC, K, S, Z]

Aristida stricta Michaux, Carolina Wiregrass, Pineland Three-awn. Cp (NC, SC), Pd (NC): Coastal Plain pinelands of nearly all sorts, ranging from the driest white-sand sandhills to seasonally saturated pine savannas dominated by a mixture of longleaf pine and pond pine, largely or entirely replaced in the wettest savannas by *Sporobolus teretifolius*, *Sporobolus pinetorum*, *Muhlenbergia expansa*, *Ctenium aromaticum*, and *Calamovilfa brevifolia*; also in Piedmont areas adjacent to the Coastal Plain and formerly supporting fire-maintained longleaf pine woodlands; common, rare in Piedmont. September-November. Ne. NC (south of Albemarle Sound and the Roanoke River), south to ne. SC (Lee and Kershaw counties). *A. stricta* was the keystone species of much of the upland Coastal Plain of the Carolinas. Its flammable foliage facilitated the spread of lightning-set fires that maintained the biologically rich pine savanna, sandhill, and pine flatwood ecosystems once widespread in our area. Though still locally common in parts of the Sandhill region and in portions of Brunswick, Pender, Onslow, and Carteret counties, NC, *A. stricta* is much rarer than formerly. The conversion of vast acreages of former pinelands to agriculture, pine tree farms, and developed areas has taken its toll over the years. In the twentieth century, suppression of fire has also led to the destruction of *A. stricta*. More recently, pine-straw raking is leading to the serious decline of *A. stricta* in its few remaining strongholds on public lands. *A. stricta* has little tolerance for ground disturbance. See Peet (1993) for discussion of the taxonomy and ecology of this species. Ward (2001) proposes varietal status for *A. stricta* and *A. beyrichiana*. [= K, Y; < *A. stricta* – RAB, FNA, GW, HC, S, V, Z (also see *A. beyrichiana*); = *A. stricta* var. *stricta* – X]

Aristida tenuispica A.S. Hitchcock, Southern Arrowfeather. Cp (FL, GA, NC, SC): sandy habitats; uncommon? August-October. NC south to FL and west to MS. [= HC, S; = *A. purpurascens* Poiret var. *tenuispica* (A.S. Hitchcock) Allred – FNA, K, Z]

Aristida tuberculosa Nuttall, Seabeach Needlegrass. Cp (FL, GA, NC, SC, VA): sandhills, coastal dunes (in VA), other dry, sandy habitats such as sandy roadsides; common, rare in VA (VA Watch List). August-October. Se. NH south to NJ and disjunct in e. VA in the outer Coastal Plain; from sc. NC south to Panhandle FL and west to s. MS (Sorrie & Leonard 1999), mostly in the inner Coastal Plain; and also near the Great Lakes in sw. MI, n. IN, n. IL, s. WI, se. MN, and e. IA. The curious trimodal distribution is unexplained. [= RAB, C, F, FNA, G, HC, K, S, Z]

Aristida virgata Trinius. Cp (FL, GA, NC, SC, VA), Pd (GA), Mt (NC): moist to wet savannas, mountain bogs (Henderson Co., NC), other moist habitats; common. August-October. S. NJ south to FL, west to TX, primarily on the Coastal Plain. [= RAB, C, F, G, GW, HC, S; = *A. purpurascens* Poiret var. *virgata* (Trinius) Allred – FNA, K, Z]

Allred (1986) reports the collection of several additional non-native species from our area, including *A. divaricata* Willdenow from sw. United States (from a Soil Conservation Service test nursery in Chapel Hill, NC) and uncertainly identified material of an Australian species (from a wool-combing mill at Jamestown, Berkeley County, SC). There is no evidence that either are naturalized.

Arrhenatherum Palisot de Beauvois 1812 (False Oatgrass)

A genus of about 6 species, perennials, of the Mediterranean region and e. Asia. References: Hatch in FNA (2007a); Tucker (1996)=Z.

- 1 Base of culm consisting of a series of adjacent (moniliform) corms 5-10 mm in diameter *A. elatius* var. *bulbosum*
 1 Base of culm not swollen or cormose, 2-4 mm thick *A. elatius* var. *elatius*

* ***Arrhenatherum elatius*** (Linnaeus) J. & K. Presl var. *bulbosum* (Willdenow) Spenner, Tuber Oatgrass, Onion Couch. {VA}: habitat in our area not known; abundance not known, native of Europe. This variety was apparently cultivated for the edible tubers in Bronze Age Europe (Tucker 1996). Cited for VA in HC. [= C, F, G, HC, K, WV, Z; = *A. elatius* ssp. *bulbosum* (Willdenow) Schübl. & G. Martens – FNA; < *A. elatius* – GW, W; = *A. elatius* var. *tuberosum* Thiel. – S]

* ***Arrhenatherum elatius*** (Linnaeus) J. & K. Presl var. *elatius*, Tall Oatgrass. Pd (GA, NC, VA), Mt (NC, VA), Cp (NC, VA): meadows, fields, roadsides; common, native of Europe. May-June. [= C, F, G, HC, K, S, WV, Z; < *A. elatius* – RAB, GW, W; = *A. elatius* ssp. *elatius* – FNA]

Arthraxon Palisot de Beauvois 1812 (Basket Grass)

References: van Welzen (1981)=Y; Thieret in FNA (2003a); Kiger (1971)=Z.

Identification notes: Sometimes confused (especially before flowering) with *Microstegium*, but *Arthraxon* has distinctly cordate-clasping leaves, which *Microstegium* lacks. Also vegetatively similar to *Oplismenus*.

* ***Arthraxon hispidus*** (Thunberg) Makino var. *hispidus*, Basket Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): moist ditches, bottomlands, disturbed areas; common, native of se. Asia. September-October. Like *Microstegium*, *Arthraxon* appears to be steadily increasing its abundance in our area. [= FNA, Y; < *A. hispidus* – C, GW, K, Z; > *A. hispidus* var. *cryptatherus* (Hackel) Honda – RAB, F, G, HC, W]

Arundinaria Michaux 1803 (Cane)

A genus of 3 species, woody grasses (bamboos), native of se. United States. *Arundinaria* was much reduced by the foraging of free-range livestock in the eighteenth and early nineteenth centuries and by fire suppression in the late nineteenth century and

throughout the twentieth century. "Canebrakes," large areas dominated by cane, were described in many historical accounts and apparently occupied large parts of the landscape of the Coastal Plain, also occurring in the Piedmont and low Mountains.

References: Clark & Triplett in FNA (2007a); Tucker (1988)=Y; McClure (1973)=Z; McClure (1963); Judziewicz et al. (2000)=X; Triplett, Weakley, & Clark (2006)=Q. The key is adapted from Q.

- 1 Primary branches with 0-1 compressed basal internodes; culm internodes usually sulcate; culm leaves deciduous; culms to 10 m tall; rhizomes lacking air canals *A. gigantea*
- 1 Primary branches with 2-5 compressed basal internodes; culm internodes usually terete; culm leaves persistent to tardily deciduous; culms to 4 m tall; rhizomes with or without longitudinal air canals (visible in cross-section as a cylinder of hollow canals 1 mm or less from the outer surface).
- 2 Foliage blades chartaceous, deciduous, abaxial surfaces pilose or glabrous, weakly tessellate; primary branches usually < 35 cm long, basal nodes not developing secondary branches; top knot blades 12-22.5 cm long; rhizomes with or without air canals..... *A. appalachiana*
- 2 Foliage blades coriaceous, persistent, abaxial surfaces densely pubescent or glabrous, strongly tessellate; primary branches usually > 50 cm long, basal nodes developing secondary branches; top knot blades 20-30 cm long; rhizomes with air canals *A. tecta*

Arundinaria appalachiana Triplett, Weakley, & L.G. Clark, Hill Cane. Mt, Pd (GA, NC, SC): dry to moist forests on slopes; common. Noted as distinctive as long ago as 1900 by R.M. Harper, W.C. Coker, W.W. Ashe, and C.D. Beadle, this distinctive plant of the Appalachians has only recently been described as a species (Triplett, Weakley & Clark 2006). The short plants (often only knee-high, though sometimes head-high) on mountain slopes south of Asheville are autumn-deciduous, whereas both our other species are evergreen. [= FNA, Q; < *A. gigantea* (Walter) Walter – RAB, GW; < *A. gigantea* ssp. *tecta* (Walter) McClure – K, X, Z; < *A. tecta* – HC, S, Y; = *A. tecta* var. *decidua* Beadle in L.H. Bailey] {AL, TN}

Arundinaria gigantea (Walter) Muhlenberg, Giant Cane, River Cane. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): swamps, floodplains; common. April-July. Widespread in se. North America, ranging from s. OH south to FL and e. TX. There has been much disagreement over the recognition of one, two, or several taxa of cane in the Southeastern United States. This species reaches heights of 6-7 (-10) m and is supposed to flower only once every 40-50 years. *A. macrosperma* Michaux is controversial, sometimes considered to be a synonym of *A. gigantea* or to represent hybridization or introgression between *A. gigantea* and *A. tecta*. [= F, FNA, HC, Q, S, WV, Y; < *A. gigantea* – RAB, C, GW (also see *A. tecta*); = *A. gigantea* ssp. *gigantea* – K, Z; > *A. gigantea* ssp. *gigantea* – X; > *A. gigantea* (Walter) Muhlenberg ssp. *macrosperma* (Michaux) McClure – X; > *A. macrosperma* Michaux]

Arundinaria tecta (Walter) Muhlenberg, Switch Cane, Small Cane. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): savannas, pocosins, canebrakes, generally (but not solely) in wetlands; common. April-July. Primarily a Southeastern Coastal Plain endemic: e. MD to FL and s. AL. *A. tecta* is a smaller plant than *A. gigantea* (normally 1-2 m tall, but reaching heights of up to 4 m where fire-suppressed), and flowers more frequently, supposedly every 3-4 years (Tucker 1988), probably actually in response to fire. [= FNA, Q; < *A. gigantea* (Walter) Muhlenberg – RAB, C, GW; < *A. tecta* – F, HC, S, Y; < *A. gigantea* ssp. *tecta* (Walter) McClure – K, X, Z]

Arundo Linnaeus 1753 (Giant Reed)

A genus of 3 species, widespread in the tropics, subtropics and warm-temperate areas. References: Allred in FNA (2003a).

* *Arundo donax* Linnaeus, Giant Reed. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, VA): disturbed areas; uncommon, native of the Old World. September-October. Horticultural forms with leaves transversely striped white and green have been treated as var. *versicolor*, but are better considered as only a form or cultivar. [= RAB, F, FNA, K, S; > *A. donax* var. *donax* – HC; > *A. donax* var. *versicolor* (P. Miller) Stokes – HC]

Avena Linnaeus 1753 (Oats)

A genus of about 29 species, native of temperate and boreal Eurasia and n. Africa. References: Baum in FNA (2007a); Tucker (1996)=Z.

- 1 Florets disarticulating from the glumes at maturity (the glumes remaining attached to the plant); lemmas pubescent with brown hairs; lemmas with long bent awns; callus bearded with hairs up to ¼ as long as the lemmas..... *A. fatua*
- 1 Florets not disarticulating from the glumes at maturity; lemmas glabrous or scabrous (rarely sparsely strigose); lemmas unawned or with relatively straight awns; callus glabrous *A. sativa*

* *Avena fatua* Linnaeus, Wild Oats. (VA). {needs herbarium checks; no records shown on VA Atlas}. [= C, F, G, HC, K]

* *Avena sativa* Linnaeus, Oats. Mt (NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): fields and disturbed areas; commonly cultivated, uncommonly escaping. May-June. An important crop, but apparently only a weed until transported from the Middle East to the moister central Europe, where cultivated beginning about 3000 BP (Hancock 2004). [= RAB, G, HC, K, S, W, Z; > *A. sativa* var. *orientalis* (Schreber) Alefeld – F; > *A. sativa* var. *sativa* – F]

Avenella Koch ex Steudel 1840 (Hairgrass)

A monotypic genus, perennial, circumboreal, formerly often included in *Deschampsia*. References: Chiappella (2007).

Avenella flexuosa (Linnaeus) Drejer, Common Hairgrass, Wavy Hairgrass. Mt (GA, KY, NC, SC, TN, VA), Pd (NC, VA), Cp (NC, VA): grassy balds, high elevation rocky summits, rocky or sandy woodlands; common (uncommon in Piedmont and Coastal Plain). April-August. Circumboreal, ranging south in North America to n. GA, OH, WI, and MN; disjunct in AR and OK, and in Mexico. [= *Deschampsia flexuosa* – RAB, C, FNA, G, HC, W, WV, Z; > *D. flexuosa* (Linnaeus) Trinius var. *flexuosa* – F, K; = *Aira flexuosa* Linnaeus – S]

Axonopus Palisot de Beauvois 1812 (Carpet Grass)

A genus of ca. 100 species, primarily tropical and subtropical. Phylogenetic studies suggest that *Axonopus* may be included in *Paspalum*. References: Barkworth in FNA (2003a).

- 1 Spikelets 4-6 mm long..... *A. furcatus*
- 1 Spikelets 1.5-2.8 mm long.
 - 2 Spikelets 1.5-2.2 mm long; leaf blades mostly 8-10 mm wide..... *A. compressus*
 - 2 Spikelets 2.2-2.8 mm long; leaf blades mostly 2-4 (-6) mm wide..... *A. fissifolius*

Axonopus compressus (Swartz) Palisot de Beauvois, Southern Carpet Grass. Cp (FL, GA, SC, VA?): lawns; rare, probably introduced. Reported for VA by HC. Sometimes used as a lawn grass in the deep South. [= FNA, HC, K, S; *Paspalum*]

Axonopus fissifolius (Raddi) Kuhl., Common Carpet Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): sandy forests, roadsides, lawns; common (rare in VA). June-October. VA south to FL, west to TX and OK, and extending into tropical America. [= FNA, K; ? *A. affinis* Chase – RAB, GW, HC, W; = *Paspalum fissifolium* Raddi]

Axonopus furcatus (Flügge) A.S. Hitchcock, Big Carpetgrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): sandy forests, bottomlands, roadsides, lawns; common. July-October. Se. VA south to FL, west to TX and AR. [= RAB, C, F, FNA, G, GW, HC, K, S; = *Paspalum furcatum* Flügge] {FL}

Bambusa Schreber 1789 (Bamboo)

A genus of ca. 100 species, trees and shrubs, native to tropical and subtropical Asia. References: Stapleton in FNA (2007a).

- 1 Culm leaves with auricles well-developed, to 5 cm long and 1.5 cm wide; basal internodes swollen, much shorter than the internodes above... *[B. vulgaris]*
- 1 Culm leaves with auricles absent or very small and rounded; basal internodes not swollen, not much longer than those above.
 - 2 Culm internode surfaces hispid; culm internodes solid; culms 0.5-7 m tall, arching..... *B. multiplex*
 - 2 Culm internodes surfaces glabrous; culm internodes hollow; culms 6-15 m tall, erect..... *[B. oldhamii]*

* *Bambusa multiplex* (Loureiro) Rauschel ex Schultes & Schultes f, Hedge Bamboo, Dwarf Bamboo. Cp (FL, GA): disturbed areas; rare, native of se. Asia. Reported as naturalized or persistent in portions of the southeastern United States, including GA, FL Panhandle, and FL peninsula. [= FNA, HC] {FL}

* *Bambusa oldhamii* Munro, Oldham's Bamboo. Native of China and Taiwan. Reported for NC (Kartesz 1999). {investigate} [= FNA; = *Sinocalamus oldhami* (Munro) McClure – HC; = *Sinocalamus latiflorus* (Munro) McClure – K, misapplied]

* *Bambusa vulgaris* Schrader ex J.C. Wendland, Common Bamboo. Native of tropical Asia. Reported for SC (Kartesz 1999). {investigate} [= FNA, HC, K] {FL}

Bothriochloa Kuntze 1891 (Beardgrass, Cane Bluestem)

A genus of ca. 35 species, widespread in tropical and subtropical regions of the Old and New World. References: Allred in FNA (2003a); Vega (2000)=Z; Allred & Gould (1983)=Y. Key adapted from Allred in FNA (2003a).

- 1 Sessile spikelets 4.5-8.5 mm long..... *B. barbinodis*
- 1 Sessile spikelets 3-4.5 mm long.
 - 2 Pedicellate spikelets much shorter than the sessile spikelets.
 - 3 Panicles reddish when mature; hairs below the sessile spikelets sparse and ca. ¼ as long as the spikelets, not obscuring the spikelets *[B. bladhii]*
 - 3 Panicles silvery-white or tannish when mature, hairs below the sessile spikelets dense and > ½ as long as the spikelets, somewhat obscuring the spikelets..... *B. laguroides* ssp. *torreyana*
 - 2 Pedicellate spikelets about as long as the sessile spikelets.
 - 4 Rachises longer than the branches..... *[B. bladhii]*
 - 4 Rachises shorter than the branches.
 - 5 Lower glumes of the sessile spikelets with a dorsal pit..... *B. pertusa*
 - 5 Lower glumes of the sessile spikelets without a dorsal pit..... *B. ischaemum* var. *songarica*

* *Bothriochloa barbinodis* (Lagasca y Segura) Herter, Cane Bluestem, Pinhole Bluestem. Cp (FL, SC), Pd (SC): disturbed areas; rare, native of w. United States. [= FNA, K; > *Bothriochloa perforata* (Trinius ex E. Fourn.) Herter – Z; = *Andropogon*

barbinodis Lagasca y Segura – HC; > *Bothriochloa barbinodis* (Lagasca y Segura) Herter var. *perforata* (Trinius ex E. Fourn.) Gould; > *Andropogon perforatus* Trinius ex E. Fournier]

* ***Bothriochloa ischaemum*** (Linnaeus) Keng var. *songarica* (Ruprecht ex Fischer & C.A. Meyer) Celarier & Harlan, King Ranch Bluestem. Cp (FL, SC): disturbed places; rare, native of western North America. Reported for SC (Kartesz 1999). [= K, Z; < *B. ischaemum* – FNA]

* ***Bothriochloa laguroides*** (A.P. de Candolle) Herter ssp. *torreyana* (Steudel) Allred & Gould, Silver Bluestem. Cp (FL, GA, KY, SC, TN), Ip (KY, TN), Mt (TN), Pd (GA, VA): disturbed areas; rare, native of c. and sw. United States and Mexico. Reported for SC (Kartesz 1999), ne. GA (Jones & Coile 1988; Allred & Gould 1983), e. TN, and c. TN (Chester et al. 1993), in some cases as *B. saccharoides* var. *torreyana*. [= FNA, K, Y, Z; = *B. saccharoides* (Sw.) Rydberg var. *torreyana* (Steudel) Gould]

* ***Bothriochloa pertusa*** (Linnaeus) A. Camus, Pitted Bluestem. Cp (FL): disturbed areas; rare, native of {. Introduced at scattered sites in e. North America, including FL, LA, MD, and MS (FNA, Kartesz 1999). [= FNA, K, Z; = *Andropogon pertusus* (Linnaeus) Willdenow – HC] {FL} {synonymy incomplete}

* *Bothriochloa bladhii* (Retzius) S.T. Blake, Australian Bluestem. Reported from e. TN (according to specimen cited by FNA and Z) and FL. [= FNA, K, Z] {FL} {synonymy incomplete}

Bouteloua Lagasca y Segura 1805 (Gramma)

A genus of about 40 species, of the Western Hemisphere. References: Herrera Arrieta, Peterson, & de la Cerda Lemus (2004)=X; Columbus (1999)=Z; Gould (1979)=Y; Wipff in FNA (2003a); Snow in FNA (2003a). Key based in part on Wipff in FNA (2003a)

- | | | |
|---|--|--|
| 1 | All spikelets unisexual, plants usually dioecious; [introduced species]..... | <i>B. dactyloides</i> |
| 1 | Lowest floret in each spikelet bisexual, the upper staminate or sterile; [introduced or native species]. | |
| 2 | Panicle branches deciduous; disarticulation occurring at the base of the branch (the branch therefore falling whole); spikelets 2-3 per branch, appressed to the branch; [native species of limestone habitats, also with introduced populations]; [subgenus <i>Bouteloua</i>]..... | <i>B. curtispindula</i> var. <i>curtispindula</i> |
| 2 | Panicle branches persistent; disarticulation occurring above the glumes (the individual florets therefore falling); spikelets >6 per branch, pectinately disposed; [rare introductions]; [subgenus <i>Chondrosom</i>]. | |
| 3 | Panicle branches terminating in a spikelet..... | <i>B. gracilis</i> |
| 3 | Panicle branches extending beyond the base of the terminal spikelets..... | <i>B. hirsuta</i> var. <i>hirsuta</i> |

Bouteloua curtispindula (Michaux) Torrey var. *curtispindula*, Side-oats Gramma. Mt (GA, TN, VA), Pd (GA), Ip (KY, TN), Cp (FL): dry rocky slopes and bluffs over limestone or serpentine, limestone glades; uncommon. July-September. S. CT west to MT, south to VA, e. TN, nw. GA, AL, panhandle FL (Gadsden County), TX, AZ, and CA; also in Central and South America. The older literature refers to *B. curtispindula* as introduced in SC, but the single specimen documenting its occurrence there appears to be from experimental plantings at Clemson University; there is apparently no evidence of its establishment. *B. curtispindula* occurs on serpentine in the Piedmont of Georgia (Allison, pers. comm.). Var. *caespitosa* Gould & Kapadia is caespitose rather than rhizomatous and occurs in sw. United States. [= C, FNA, K, Y; < *B. curtispindula* – RAB, F, G, HC, S, W, WV]

* ***Bouteloua dactyloides*** (Nuttall) J.T. Columbus, Buffalo Grass. Mt (VA), Pd, Cp (GA): lawns, disturbed areas; rare, native of from w. North America. [= Z; = *Buchloe dactyloides* (Nuttall) Engelman – C, F, FNA, G, HC, K]

* ***Bouteloua gracilis*** (Willdenow ex Kunth) Lagasca y Segura ex Griffiths, Blue Gramma. Cp (SC): disturbed areas; rare, native of w. North America. Reported for SC (Gould 1979). [= F, FNA, K, Y; > *Bouteloua gracilis* var. *gracilis* – HC]

Bouteloua hirsuta Lagasca y Segura var. *hirsuta*, Hairy Gramma. Cp (FL, GA*, SC*): maritime grasslands (FL), disturbed areas; rare, native of w. North America. Present in the FL peninsula (Wunderlin & Hansen 2003), where considered native; reported for SC and GA (Kartesz 1999). [= K, Y; < *Bouteloua hirsuta* – F, HC; = *Bouteloua hirsuta* ssp. *hirsuta* – FNA]

Brachyelytrum Palisot de Beauvois 1812 (Shorthusk)

The only other species of the genus is *B. japonicum* Hackel, of s. Japan, Korea, and ec. China (Saarela et al. 2003, Tucker 1988). References: Stephenson & Saarela in FNA (2007a); Saarela et al. (2003)=Z; Tucker (1988)=Y; Stephenson (1971); Voss (1972); Campbell, Garwood, & Specht (1986). Key based in part on Saarela et al. (2003).

- | | |
|---|---|
| 1 | Lemmas hirsutulous or minutely scabrous, the longest hairs (0.06-) 0.08-0.14 (-0.2) mm long (not evident at 10×); lemma (0.7-) 0.8-1.2 (-1.4) mm wide; widest leaf blade (8-) 10-14 (-16) mm wide; second glume (0.6-) avg. 1.2 (-3.0) mm long; [plants of the Mountains]... <i>B. aristosum</i> |
| 1 | Lemmas hirsute with hairs (0.2-) 0.4-0.8 (0.9) mm long (easily seen at 10×); lemma (0.8-) 1.1-1.5 (-1.8) mm wide; widest leaf blade (9-) 11-17 (-20) mm wide; second glume (0.2-) avg. 2.2 (7.0) mm long; [plants widely distributed in our area]..... <i>B. erectum</i> |

Brachyelytrum aristosum (Michaux) Trelease in Branner & Coville, Northern Shorthusk. Mt (GA, NC, VA): moist forests, mostly at moderate to high elevations, such as northern hardwoods and spruce-fir; rare. July-August. Fairly widespread in ne. North America, south in the mountains to sw. NC and n. GA. In MI, *B. septentrionale* flowers about 10 days before co-occurring *B. erectum*, with strongly synchronized anthesis of each species occurring on a single day (Stephenson 1971)). Reputed intermediates and hybrids between the two taxa are apparently based on the use of ambiguous characters. [= FNA, Z; =

Brachyelytrum septentrionale (Babel) G. Tucker – K, Y; < *B. erectum* – RAB, G, HC, S, W; = *B. erectum* var. *septentrionale* Babel – F; = *B. erectum* var. *glabratum* (Vasey ex Millspaugh) Koyama & Kawano – C; > *B. aristosum* var. *glabratum* Vasey – WV]

Brachyelytrum erectum (Schreber ex Sprengel) Palisot de Beauvois, Common Shorthusk. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA): mesic forests, in the Mountains at lower elevations than *B. septentrionale*; common (uncommon in Piedmont, rare in Coastal Plain). June-August. MA, NY, OH, MI, and s. WI south to FL and TX. [= FNA, K, WV, Y, Z; < *B. erectum* – RAB, G, HC, S, W (also see *B. septentrionale*); = *B. erectum* var. *erectum* – C, F]

Brachypodium Palisot de Beauvois 1812

A genus of about 18 species, mainly Mediterranean Europe and n. Africa. References: Piep in FNA (2007a).

* ***Brachypodium sylvaticum*** (Hudson) Palisot de Beauvois *ssp. sylvaticum*, Slender False Brome. Pd (VA): roadsides and yards; rare, native of Europe. [= FNA; < *B. sylvaticum* – HC, K]

Briza Linnaeus 1753 (Quaking Grass)

A genus of about 20 species, annuals and perennials, native of Eurasia and South America. References: Snow in FNA (2007a); Tucker (1996)=Z.

- 1 Plant perennial; ligules ca. 0.5 mm long.....[*B. media*]
- 1 Plant annual; ligules 3-13 mm long.
 - 2 Spikelets 10-20 mm long.....*B. maxima*
 - 2 Spikelets 2-7 mm long.....*B. minor*

* ***Briza maxima*** Linnaeus, Greater Quaking Grass. Cp (GA): disturbed areas; rare, native of the Mediterranean region. Reported in e. GA (Jones & Coile 1988). [= FNA, K] {synonymy incomplete}

* ***Briza minor*** Linnaeus, Lesser Quaking Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): fields, disturbed areas; common (rare in VA Coastal Plain), native of Europe. April-June. [= RAB, C, F, FNA, G, GW, HC, K, S, Z]

* ***Briza media*** Linnaeus, Perennial Quaking Grass, reported for scattered locations in PA (Rhoads & Klein 1993), MD, DE, and AL (Kartesz 1999). [= FNA, K] {synonymy incomplete}

Bromus Linnaeus 1753 (Brome-grass)

A genus of about 150 species, north temperate and South American. References: McNeill (1976); Sales (1993, 1994)=Z; Tucker (1996)=Y; Pavlick (1995)=X; McKenzie & Ladd (1995); Pavlick & Anderton in FNA (2007a).

- 1 Lemmas compressed and strongly keeled (the whole spikelet thus strongly laterally flattened); first glume 3-9-nerved; [section *Ceratochloa*].*B. catharticus* var. *catharticus*
- 1 Lemmas rounded or weakly keeled (the whole spikelet therefore terete to somewhat laterally flattened); first glume either 3-5-nerved or 1-3-nerved.
 - 2 First glume 3-5 nerved (at least 3 nerves well-developed).
 - 3 Lemma awn 2-3 mm long; plant perennial; [native species of dry woodlands]; [section *Bromopsis*].....*B. kalmii*
 - 3 Lemma awn 3-12 mm long (or 0-6 mm long in *B. secalinus*); plant annual; [introduced species of disturbed habitats]; [section *Bromus*].
 - 4 Panicle compact, the lateral branches erect or ascending, the pedicels < 10 mm long (shorter than the spikelets)
 - 5 Lemmas 3-5 mm wide; inflorescence ovoid in outline*B. hordeaceus* *ssp. hordeaceus*
 - 5 Lemmas 1.5-2 mm wide; inflorescence obovoid in outline*B. scoparius*
 - 4 Panicle relatively open, the lateral branches erect, ascending, or spreading, the pedicels > 15 mm long (longer than the spikelets).
 - 6 Margins of the lemmas involute in fruit, wrapping around the grain, exposing the rachilla*B. secalinus*
 - 6 Margins of the lemmas gaping, overlapping in fruit.
 - 7 Panicle branches erect or ascending, relatively stiff and straight*B. racemosus*
 - 7 Panicle branches spreading (at least the lower), either relatively stiff and straight, or flexuous and lax.
 - 8 Panicle branches stiff; lemma awns 5-12 mm long, straight.....*B. commutatus*
 - 8 Panicle branches flexuous and lax; lemma awns 7-15 mm long, flexuous.....*B. japonicus*
 - 2 First glume 1 (-3) nerved (only 1 nerve well-developed).
 - 9 Longer lemma awns 10-60 mm long; plants annual; [introduced species of disturbed habitats]; [section *Genea*].
 - 10 Panicle dense, spikelike.....*B. rubens*
 - 10 Panicle open, not spikelike.
 - 11 First glume 13-20 mm long; second glume 20-30 mm long; lemma awns 35-60 mm long.....*B. rigidus*
 - 11 First glume 5-14 mm long; second glume 8-17 mm long; lemma awns 10-30 mm long.
 - 12 First glume 7-14 mm long; second glume 9-17 mm long; lemma awns 18-30 mm long*B. sterilis*
 - 12 First glume 5-7 mm long; second glume 8-11 mm long; lemma awn (-7-) 10-17 mm long.....*B. tectorum*
 - 9 Longer lemma awns 1-6 (-8) mm long; plants perennial; [native and introduced species, collectively of disturbed and natural habitats]; [section *Bromopsis*].
 - 13 Plants with creeping rhizomes, forming clonal colonies; both surfaces of leaves glabrous or glabrescent.....*B. inermis*

- 13 Plants not strongly rhizomatous, the stems solitary or tufted; surfaces of leaf blades usually pubescent (sometimes sparsely so).
 14 Pedicels erect or ascending, mostly shorter than the spikelet; leaves 2-3 mm wide; [introduced, of disturbed habitats].....**B. erectus**
 14 Pedicels ascending at first, later arching-drooping, mostly longer than the spikelet; leaves 4-15 mm wide; [native, mostly of forests].
 15 Lemmas glabrous (or very minutely pubescent) on the back, hairy along the lower margins with long hairs..... **B. ciliatus**
 15 Lemmas uniformly hairy over the entire back-surface (or rarely entirely glabrous).
 16 Culms with 10-20 leaves, often weak and leaning or reclining; junction of sheaths and base of leaf blades with 2 well-developed flanges prolonged into auricles or divergent spurs; second glume primarily 5-nerved; flowering late, with anthesis August-October..... **B. latiglumis**
 16 Culms with 6-10 leaves, erect; junction of sheaths and base of leaf blades lacking flanges or auricles; second glume primarily 3-nerved; flowering earlier, anthesis from May-August.
 17 Underleaf surfaces with a conspicuous satiny sheen (when fresh); summit of sheath opposite the ligule with a conspicuous tuft of hairs..... **B. nottowayanus**
 17 Underleaf surfaces lacking a conspicuous satiny sheen; summit of sheath opposite the ligule lacking a conspicuous tuft of hairs..... **B. pubescens**

* **Bromus catharticus** Vahl var. *catharticus*, Rescue Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC, VA): disturbed areas; common (uncommon in VA), native of South America. April-June. [= FNA; ? *B. catharticus* – RAB, F, G, HC, K, W, X, Y; ? *Bromus willdenowii* Kunth – C; ? *Bromus unioloides* Kunth – S]

Bromus ciliatus Linnaeus, Fringed Brome. Mt (NC, VA): seepage areas, edges of fens, moist areas near high elevation creeks, grassy balds, high elevation woodlands, mostly over amphibolite or other mafic rocks; rare. July-August. Widespread in n. North America: Labrador to AK, south in the east to PA, and in the mountains to NC. Known in NC only from Bluff Mountain and Long Hope Valley, Ashe and Watauga counties, and Roan Mountain, Mitchell County. [= RAB, C, FNA, G, HC, S, W, WV, X, Y; > *Bromus ciliatus* var. *ciliatus* – F, K; = *Bromopsis ciliata* (Linnaeus) Holub]

* **Bromus commutatus** Schrader, Hairy Chess, Meadow Brome. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Cp (FL, NC, SC, VA): disturbed areas; common, native of Europe. May-June. The relationship and relative distribution of this species and *Bromus racemosus* is poorly known for our area. See *Bromus racemosus* for further comments. [= C, F, FNA, HC, K, S, WV, X, Y; < *Bromus commutatus* – RAB (also see *Bromus racemosus*); < *Bromus racemosus* – G, W]

* **Bromus erectus** Hudson, Short-branched Brome. Mt, Pd (VA), Ip (KY): disturbed areas; rare, native of Europe. [= C, F, FNA, G, HC, K, S, WV, X; = *Bromopsis erecta* (Hudson) Fourr.]

* **Bromus hordeaceus** Linnaeus ssp. *hordeaceus*, Soft Chess, Lopgrass. Mt (NC, VA), Pd (VA), Cp (SC, VA), Ip (KY): disturbed areas; rare, native of Europe. July. [= FNA, K, X; ? *Bromus mollis* Linnaeus – RAB, F, G, HC, misapplied; < *Bromus hordeaceus* – C, Y]

* **Bromus inermis** Leysser, Smooth Brome, Hungarian Brome. Cp (KY, NC, SC, VA), Mt (KY, NC, VA), Pd (VA), Ip (KY): disturbed areas; rare (uncommon in VA Piedmont and VA Mountains), native of Europe. June-July. [= RAB, C, FNA, G, HC, S, W, WV, X, Y; > *Bromus inermis* var. *inermis* – F; > *Bromus inermis* ssp. *inermis* var. *inermis* – K; = *Bromopsis inermis* (Leysser) Holub]

* **Bromus japonicus** Thunberg ex Murray, Japanese Chess. Mt (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA), Ip (KY): disturbed areas; common, native of Asia. May-June. [= RAB, C, FNA, G, K, S, W, WV, X, Y; > *Bromus japonicus* var. *japonicus* – F, HC; > *Bromus japonicus* var. *porrectus* Hackel – F, HC] {FL}

Bromus kalmii A. Gray, Kalm Brome. Mt (VA): shale woodlands and barrens, grassy ridgetop oak forests; rare. ME west to SD, south to MD, w. VA, and IA. Distinctive for its few leaves (usually 3-4) clustered near the base, the spikelets large and approximate to one another in a narrow, nodding panicle. [= C, F, FNA, G, HC, K, X]

Bromus latiglumis (Shear) A.S. Hitchcock, Riverbank Brome, Auricled Brome, Hairy Woodbrome, Flanged Brome. Mt (NC, VA), Pd (VA), Ip (KY): alluvial soils along rivers; uncommon (rare in NC, rare in VA Piedmont, rare in KY Interior Low Plateau). August-October. Widespread in ne. North America, from ME to MT, south to NC and OK. Flowering many weeks later than co-occurring *B. pubescens*. In NC apparently only along large rivers flowing west through the Appalachians into the Mississippi River drainage, notably the New and the French Broad. [= F, FNA, G, HC, K, WV, X; < *Bromus purgans* Linnaeus – RAB; = *Bromus altissimus* Pursh – C; < *Bromus latiglumis* – Y (also see *Bromus nottowayanus*)]

Bromus nottowayanus Fernald, Satin Brome, Nottoway River Brome, Virginia Brome. Pd (NC, VA), Cp (VA), Mt (VA), Ip (KY): moist forests, especially along small stream bottoms; rare. June-August. The range of this species is poorly known, owing to confusion between it, *B. pubescens* and *B. latiglumis*. It is apparently known from MD, VA, and NC, west to TN, IL, IN, MO, and AR. McKenzie & Ladd (1995) report on the biology and taxonomy of this species. [= C, F, FNA, HC, K, X; < *Bromus purgans* Linnaeus – RAB; < *Bromus latiglumis* – Y; = *Bromopsis nottowayana* (Fernald) Holub]

Bromus pubescens Muhlenberg ex Willdenow, Common Eastern Brome, Canada Brome. Mt (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, KY, VA), Ip (KY): mesic forests, generally on rocky slopes, common. May-August. Widespread in e. North America: s. Ontario west to Alberta, south to FL and AZ. [= C, FNA, K, W, X, Y; < *Bromus purgans* Linnaeus – RAB, S, misapplied (also see *Bromus latiglumis* and *Bromus nottowayanus*); = *Bromus purgans* Linnaeus – F, G, WV, misapplied; > *Bromus purgans* var. *purgans* – HC; > *Bromus purgans* var. *laeviglumis* (Scribner ex Shear) Swallen – HC; = *Bromus laeviglumis* – S, misapplied (?); = *Bromopsis pubescens* (Muhlenberg ex Willdenow) Holub]

* **Bromus racemosus** Linnaeus, Smooth Brome. Pd, Cp (NC, SC, VA), Mt (KY, NC?, SC?, VA?), Ip (KY): disturbed areas, native of Europe. May-June. The relative distribution, abundance, and habitats in our area of this species and *B. commutatus* poorly understood. Additional characters are as follows (from Stace 1997): lemmas 6.5-8 mm long (vs. 8-11 mm long in *B. commutatus*), anthers mostly 1.5-3 mm long (vs. mostly 1-1.5 mm long), spikelets 10-16 mm long (vs. 15-28 mm long), lowest rachilla segment mostly 0.7-1 mm long (vs. mostly 1.3-1.7 mm). [= C, F, FNA, HC, K, X; < *Bromus commutatus* – RAB; < *Bromus racemosus* – G, W (also see *Bromus commutatus*)]

- * ***Bromus rigidus*** Roth, Rippgut Brome, Rippgut Grass. Cp (NC, SC, VA), Pd (GA, NC): disturbed areas; rare, native of Mediterranean Europe. April. [= RAB, C, F, G, HC, K; < *Bromus diandrus* Roth – FNA, Y; ? *Bromus diandrus* var. ?? – Z]
- * ***Bromus rubens*** Linnaeus, Foxtail Chess, Red Brome. Cp (SC, VA): waste areas near wool-combing plants, other disturbed areas; rare, native of Mediterranean Europe. The SC occurrences come from areas around wool-combing plants, and were likely introduced on wool from w. United States, where this European species is well-established. Reported introduced in VA and MD (Kartesz 1999) as *B. madritensis*. [= C, FNA, G, X; ? *Bromus madritensis* Linnaeus – F, misapplied; < *B. rubens* – K; < *B. madritensis* Linnaeus – K; = *Bromus madritensis* ssp. *rubens* (Linnaeus) Husnot]
- * ***Bromus secalinus*** Linnaeus, Cheat, Common Chess, Ryebrome. Cp (FL, GA, KY, NC, SC, VA), Pd, Mt (GA, NC, SC, VA), Ip (KY): disturbed areas; common (uncommon in KY and VA), native of Europe. May-June. [= RAB, C, F, FNA, G, HC, K, S, W, WV, X, Y]
- * ***Bromus sterilis*** Linnaeus, Barren Brome, Poverty Brome, Cheatgrass. Pd (NC, VA), Mt (VA), Cp (VA), Ip (KY): disturbed areas; rare (common in VA Mountains), native of southern Europe. May-June. [= RAB, C, F, FNA, G, HC, K, S, W, WV, X, Y, Z]
- * ***Bromus tectorum*** Linnaeus, Downy Brome, Downy Chess, Downy Cheat, Junegrass, Cheatgrass. Mt (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, KY, NC, SC, VA), Ip (KY): disturbed areas; common, native of Europe. April-June. [= RAB, C, F, FNA, G, HC, K, S, W, WV, X, Y; ? *Bromus tectorum* ssp. *tectorum* – Z]
- * ***Bromus arvensis*** Linnaeus. Reported as introduced for nc. GA (Jones & Coile 1988), for VA, MD, PA, and NJ (Kartesz 1999), and for KY (Campbell 2007). {investigate} [= C, FNA, K] {not yet keyed}
- * ***Bromus briziformis*** Fischer & C.A. Meyer, Rattlesnake Brome. Reported as an introduction in ne. North America, south to MD, NJ, PA, DE (Kartesz 1999). [= FNA, K; = *B. brizaeformis* – C, orthographic variant] {not yet keyed}
- * ***Bromus carinatus*** Hooker & Arnott var. *marginatus* (Nees) Barkworth & Anderton, Mountain Brome. Reported by Jones & Coile (1988) for nc. GA and by FNA for MS. [= FNA; < *B. catharticus* – C; = *B. marginatus* Nees ex Steudel – K] {not yet keyed}
- * ***Bromus ramosus*** Hudson. Introduced. Reported for DC and MS (Kartesz 1999). [= FNA, K] {not yet keyed}
- * ***Bromus scoparius*** Linnaeus, Broom Brome. Pd, Mt (VA): disturbed areas; rare, native of s. Europe. [= FNA, K] {add to synonymy}
- * ***Bromus squarrosus*** Linnaeus, Squarrose Brome. Reported for KY and NJ (Kartesz 1999). Native of Eurasia. [= FNA, K] {not yet keyed}

Calamagrostis Adanson 1763 (Reed-grass)

A genus of about 230 species, north and south temperate. References: Marr, Hebda, & Greene in FNA (2007a); Tucker (1996)=Z; Greene (1980). Key based on FNA.

- 1 Awns attached on the upper 2/5 of the lemmas, 0.5-2 mm long, straight *C. cinnoides*
- 1 Awns attached on the lower 1/2 of the lemmas, 0.9-6 mm long, straight or bent.
 - 2 Awns usually exerted, (2.8-) 3-6 mm long; callus hairs 0.3-0.7× as long as the lemma.
 - 3 Leaves (1-) 2-3 (-4) mm wide; plant densely tufted, delicate, culms 10-55 (-60) cm tall, with 2-3 nodes; [plants of high elevation rock outcrops and glades] *C. cainii*
 - 3 Leaves (2-) 3-8 (-12) mm wide; plant rhizomatous or loosely tufted, coarse, culms (60-) 75-120 cm tall, with 3-5 nodes; [plants of low to moderate elevation forests and woodlands].
 - 4 Leaves glaucous above and below; leaf collars glabrous *C. porteri* ssp. *insperata*
 - 4 Leaves glaucous above, dark green below; leaf collars with prominent tufts of hairs *C. porteri* ssp. *porteri*
 - 2 Awns usually not exerted, 0.9-3.1 (-4) mm long; callus hairs (0.5-) 0.7-1.2 (-1.5)× as long as the lemma.
 - 5 Glumes smooth (or scabrous on the keel only); awns stout, readily distinguished from the callus hairs *C. stricta* ssp. *inexpansa*
 - 5 Glumes scabrous on the keel and often also the surface; awns delicate, difficult to distinguish from the callus hairs.
 - 6 Spikelets 2.5-4 mm long; lemmas usually shorter than the glumes; glumes rounded to broadly keeled, with raised midveins; glume apices usually acute, rarely acuminate *C. canadensis* var. *canadensis*
 - 6 Spikelets 2-3 mm long; lemmas usually about as long as the glumes; glumes rounded, midveins not raised; glume apices acute *C. canadensis* var. *macouniana*

Calamagrostis cainii A.S. Hitchcock, Cain's Reed-grass. Mt (NC, TN): high elevation rocky summits; rare. July-September. Endemic to a few mountain-tops in the Southern Appalachians, *C. cainii*, once thought to be endemic to Mount LeConte, TN, was discovered at two sites in NC in 1989 and 1990 – Mount Craig, Yancey County, and Craggy Pinnacle, Buncombe County (Wiser 1991). This species is more likely to be mistaken (especially superficially) for an *Agrostis* than for any of the other *Calamagrostis* in our area, but is distinguishable by its larger spikelets (5-6 mm long, rather than 1.3-2 mm) and the presence of a callus beard. [= FNA, HC, K, W, Z]

Calamagrostis canadensis (Michaux) Palisot de Beauvois var. *canadensis*, Bluejoint, Canada Reed-grass. Mt (GA, NC, VA): wet meadows along streams, high elevation openings, such as grassy balds and cliff bases; uncommon (rare in GA and NC). August. Widespread and common across n. North America, reaching its southern limit in the east in w. NC, e. TN (Chester et al. 1993), and ne. GA (Rabun Bald, Rabun County). [= FNA, G, HC, K; < *C. canadensis* – RAB, C, S, W, WV, Z; > *C. canadensis* var. *robusta* Vasey – F]

Calamagrostis canadensis (Michaux) Palisot de Beauvois var. *macouniana* (Vasey) Stebbins. Cp (KY): bottomlands; rare. Newfoundland and Alberta south to NJ, PA, VA?, OH, w. KY, IL, MO, NE, WY, OR. Reported for VA (FNA), the documentation unknown. Reported south to NJ and KY only (Kartesz 1999). {investigate} [= F, FNA, G, HC, K; < *C. canadensis* – C, Z; = *C. macouniana* (Vasey) Vasey]

Calamagrostis cinnoides (Muhlenberg) W.P.C. Barton, Nuttall's Reed-grass. Cp (NC, SC, VA), Mt (GA, KY, NC, SC, VA), Pd (NC, SC, VA), Ip (KY): savannas, bogs, and other wet sites; common (uncommon in KY). July-October. ME and NY south to n. GA (Jones & Coile 1988), AL, and LA, primarily on the Coastal Plain. The replacement of the familiar name *C.*

cinnooides has been suggested for nomenclatural reasons (Kartesz 1999). [= RAB, C, F, FNA, G, GW, HC, S, W, WV, Z; = *C. coarctata* Torrey ex Eaton – K]

Calamagrostis porteri A. Gray *ssp. porteri*, Porter's Reed-grass. Mt (GA, KY, NC, SC, VA), Pd (VA), Ip (KY): dry to dry-mesic forests, forest edges, cliff bases; uncommon (rare in GA, KY, and NC). NY to AL, in the Appalachians, with disjunct populations s. MO and w. AR; it was first reported from NC by Ware (1973). This species is typically sterile unless disturbed by fire or mechanically; it is therefore probably more common than collections indicate. In addition to the key characters above, it can be distinguished from *C. canadensis* by its having leaf sheaths pubescent at the summit (Matthews & Radford 1985). [= FNA, K; = *C. porteri* – C, HC, W, WV; ? *C. porteri* – G, Z]

Calamagrostis porteri A. Gray *ssp. insperata* (Swallen) C.W. Greene. Ip (KY): {habitat}; rare. OK and MO south to TN and AR. [= FNA, K; = *C. insperata* Swallen – C, HC]

Calamagrostis stricta (Timm) Koeler *ssp. inexpansa* (A. Gray) C.W. Greene. Mt (WV): {habitat}; rare. Newfoundland and Labrador west to AK, south to NY, OH, n. WV (Preston and Randolph counties), IA, AZ, and CA; ne. Asia. [= FNA, K; < *C. stricta* – C; ? *C. neglecta* (Ehrhart) Gaertner, Mey., & Scherb. var. *neglecta* – F]

Calamovilfa (A. Gray) Hackel ex Scribner & Southworth 1890 (Sandreed)

A genus of 5 species, of e. and c. North America. Reeder & Ellington (1960) studied various anatomic features of *Calamovilfa*, and determined that its closest relative was *Sporobolus*. A molecular phylogenetic study of *Sporobolus* and closely related genera suggests that *Calamovilfa* should be included in *Sporobolus* (Ortiz-Diaz & Culham 2000). References: Thieret (1966)=Z. Key based in part on Thieret in FNA (in prep.).

Identification notes: Superficially somewhat similar to *Sporobolus pinetorum*, *S. floridanus*, and *S. curtissii* (herbarium specimens of the two species have been regularly confused), *Calamovilfa* is distinguished by its leaves tapered to either end and long-acuminate (vs. parallel-margined and abruptly acute in *Sporobolus*) and tendency to form larger, clonal patches (*Sporobolus* forms wiregrass-like bunches or clumps). In flower or fruit, the *Calamovilfa* can be distinguished by characters of the spikelet, by vegetative characters, or by its coarser, generally taller culms, with the panicle branches usually spreading (rather than always ascending in *Sporobolus*). The three have very similar bases, unlike any other grasses in our area – the lower leaf sheaths are indurated and shiny, forming a hard, polished, knobby, and fire-proof covering over the short-creeping rhizome. *Aristida stricta* has a somewhat similar base, but less indurated, less creeping, and with an unpolished appearance. *Calamovilfa brevipilis* also has a cartilaginous, pale yellow annulum surrounding the outer (abaxial) surface of the juncture of the sheath and leaf, a structure not visible in the other species. Positive identification in sterile condition is not difficult.

- | | | |
|---|--|-----------------------------|
| 1 | Panicles narrow, the branches appressed-ascending; [of the Coastal Plain of FL] | <i>C. curtissii</i> |
| 1 | Panicles broad, the branches ascending-spreading; [either of the Coastal Plain of SC northwards, or of the interior]. | |
| 2 | Spikelets 6.0-7.4 mm long; glumes acute to acuminate, usually arcuate; lemmas 5.5-7.0 mm long, usually arcuate; [of river scour areas in the rocky inland parts of the South]..... | <i>C. arcuata</i> |
| 2 | Spikelets 4.0-5.8 mm long; glumes acute, straight; lemmas 4.0-5.4 mm long, straight; [of pineland habitats of the Coastal Plain of SC northwards] | <i>C. brevipilis</i> |

Calamovilfa arcuata K.E. Rogers, Cumberland Sandreed. Mt (AL, KY, TN): riverside scours; rare. Ouachita Mountains of w. AR and e. OK; Cumberland Plateau of TN (Morgan and Cumberland counties), KY (McCreary County)), and AL (Blount County). [= FNA, K]

Calamovilfa brevipilis (Torrey) Scribner, Pinebarren Sandreed. Cp (NC, SC, VA), Pd (NC): savanna-pocosin ecotones, sandhill seepage bogs, pocosins, boggy powerline rights-of-way; rare. June-October. A "bimodal endemic", with two areas of distribution: Pine Barrens of NJ and the Coastal Plain (very rarely lower Piedmont) of e. NC, n. SC, and s. VA. Var. *heterolepis* Fernald, no longer considered valid, refers to the NC-SC material; var. *calvipes* Fernald, no longer considered valid, refers to the VA material. Like *Aristida stricta*, this grass is dependent on fire for flowering (it will also sometimes flower in response to mowing or other disturbance). Suppression of the natural fire regime has led to its substantial decline and the severe contraction of its range in the Southeast, since fire exclusion in its seepage or ecotone habitat leads to rapid invasion by shrubs and competitive elimination of *Calamovilfa* and many other herbs. [= RAB, C, FNA, G, GW, K, S, Z; > *C. brevipilis* var. *brevipilis* – F, HC; > *C. brevipilis* var. *heterolepis* Fernald – HC; > *C. brevipilis* var. *calvipes* Fernald – F, HC]

Calamovilfa curtissii (Vasey) Scribner, Curtiss's Sandreed. Cp (FL): moist pinelands and edges of natural ponds; rare. FL Panhandle and e. peninsular FL. *C. curtissii* is a closely related sibling species of *C. brevipilis*. [= FNA, GW, HC, K, S, Z]

Cenchrus Linnaeus 1753 (Burgess, Sandspur)

A genus of about 16 species, primarily tropical and subtropical. References: Stieber & Wipff in FNA (2003a); Crins (1991)=Z. Key based in part on FNA.

Identifications note: Spikelets of *Cenchrus* are subtended by an involucre of spines and/or bristles which are (in most of our species) fused into a **bur**. Bristles are narrow-based and terete. Spines are broad-based, and somewhat flattened (not terete) in cross-section, at least basally.

- | | | |
|---|---|------------------------------|
| 1 | Involucre of bristles only, these not fused into a bur; perennial, to 2 m tall | <i>C. myosuroides</i> |
| 1 | Involucre of spines fused into a coherent bur, sometimes also with bristles; annual or perennials, to 1 m tall. | |
| 2 | Spines in a single whorl, subtended by numerous smaller, narrower, free outer bristles. | |
| 3 | Spines fused at the base only, the lower surfaces with 1-3 grooves..... | [<i>C. biflorus</i>] |
| 3 | Spines fused for >1/3 their length, the lower surfaces not grooved. | |

- 4 Rachis internodes 0.8-1.7 mm long; most of the outer bristles equal to or slightly longer than the flattened inner bristles (spines)..... *C. brownii*
- 4 Rachis internodes 2-4 mm long; most of the outer bristles much shorter than the flattened inner bristles (spines)..... *C. echinatus*
- 2 Spines in multiple whorls or irregular in their disposition (if few and in a single whorl, then not subtended by smaller, narrower bristles).
- 5 Plants perennial, long-lived, clump-forming; burs not imbricate, usually glabrous; leaf blades 1-3.5 mm wide..... *C. gracillimus*
- 5 Plants annual or perennial, short-lived and not clump-forming; burs imbricate, usually pubescent, leaf blades (1-) 3-14.2 mm wide.
- 6 Burs (excluding the spines) 9-16 mm long, 4-6 mm wide, the spines 4-8 mm long; spikelets 1 (-2) per bur, concealed; leaf blades 3-14 mm wide..... *C. tribuloides*
- 6 Burs (excluding the spines) 5.5-12 mm long, 2.5-6 mm wide, the spines 2-7 mm long; spikelets 2-4 per bur, exerted at the tip; leaf blades 1-5 (-7) mm wide.
- 7 Spines slender, 45-75, 3.5-7 mm long; spikelets 6-8 mm long..... *C. longispinus*
- 7 Spines stout, 6-10 (-40), 2-5 mm long; spikelets 3.5-6 mm long..... *C. spinifex*

*? *Cenchrus brownii* Roemer & J.A. Schultes. Cp (FL, GA, NC): maritime grasslands; rare. Se. United States (NC, GA, AL, and FL); West Indies, Central America, n. South America. The sole known NC specimen was collected in 1885 by Gerald McCarthy in NC "in locis navalibus et vastis." [= FNA, K; ? *C. viridis* Sprengel – HC, S]

Cenchrus echinatus Linnaeus, Southern Sandspur, Bristly Sandspur, Hedgehog Grass. Cp (FL, GA, NC, SC), Pd (GA, SC), Mt? (VA?): fields, roadsides, disturbed areas; common (uncommon in NC). June-October. NC (and DC?) south to FL, west to CA, south into the tropical America. The basis for the record for w. VA in FNA is not clear. [= RAB, C, FNA, HC, K, S, Z]

Cenchrus gracillimus Nash. Cp (FL, GA): longleaf pinelands, other sandy habitats; uncommon. N. FL, s. and e. GA, s. AL, and s. MS; West Indies (Cuba, Jamaica). [= FNA, HC, K, S]

Cenchrus longispinus (Hackel) Fernald, Northern Sandspur, Common Sandspur. Cp (FL?, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas, lawns; common (uncommon in Mountains). June-October. ME west to OR, south to FL, TX, and CA. [= RAB, C, F, FNA, K, W, Z; = *C. pauciflorus* Bentham – G, HC, S, WV, misapplied]

* *Cenchrus myosuroides* Kunth. Cp (FL, SC): roadsides, disturbed areas; rare, native of further south. December. SC south to FL, west to TX, south into the West Indies and other parts of tropical America. [= RAB, FNA, HC, K, S, Z]

Cenchrus spinifex Cavanilles, Coastal Sandspur. Cp (FL, GA, NC, SC, VA), Pd (GA, SC, VA), Mt (VA): fields, roadsides, disturbed areas; common (rare in NC and VA). July-October. VA south to FL, west to AR and KS, south into tropical America. [= FNA, K; > *C. incertus* M.A. Curtis – RAB, C, F, G, HC, S, Z]

Cenchrus tribuloides Linnaeus, Dune Sandspur. Cp (FL, GA, NC, SC, VA), Pd*, Mt* (VA): dunes, sandy fields, sandy woodlands in the outer Coastal Plain; common (rare in VA Piedmont and VA Mountains). August-October. NY (Long Island) south to FL, west to TX, south into tropical America. This is the sandspur so familiar to (and disliked by) beach-goers in our area. [= RAB, C, F, FNA, HC, K, S, W, Z]

* *Cenchrus biflorus* Roxburgh, Indian Sandbur. Introduced in s. AL; native of Africa and s. Asia. [= FNA] {AL}

Chasmanthium Link 1827 (Spanglegrass, Spikegrass)

A genus of 5 species endemic to se. North America. References: Sánchez-Ken & Clark in FNA (2003a); Yates (1966a, 1966c)=Z.

- 1 Panicle branches elongate, pendulous; spikelets (15-) 20-40 mm long, with 6-20 flowers..... *Ch. latifolium*
- 1 Panicle branches short, erect or ascending; spikelets 5-18 mm long, with 2-8 (-11) flowers.
- 2 Fully-developed spikelets 12-18 mm long, 8-12 mm wide.
- 3 Axils of the spikelets and panicle branches glabrous; empty lemmas 9 (-12); [se. NC south to c. peninsular FL and e. FL panhandle]..... *Ch. nitidum*
- 3 Axils of the spikelets and panicle branches with a tuft of long hairs; empty lemmas 2-4; [w. FL Panhandle west to e. LA (Florida parishes)]..... *Ch. ornithorhynchum*
- 2 Fully-developed spikelets 4-9 mm long, 3-7 mm wide.
- 4 Collar (junction of leaf and sheath) glabrous or nearly so; leaves 3-7 mm wide..... *Ch. laxum*
- 4 Collar (junction of leaf and sheath) pilose; leaves 6-12 mm wide.
- 5 Inflorescence with divergent branches; [in outer Coastal Plain calcareous sites from SC southwards]..... *Ch. sessiliflorum* var. *1*
- 5 Inflorescence with appressed branches; [more widespread in our area]..... *Ch. sessiliflorum* var. *sessiliflorum*

Chasmanthium latifolium (Michaux) Yates, River Oats, Fish-on-a-pole. Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Cp (FL, GA, KY, NC, SC, VA), Ip (KY): riverbanks, streambanks, bottomland forests, seepages and glades over mafic or calcareous rock, usually in nutrient-rich soils; common (uncommon in Coastal Plain and Mountains). June-October. Widespread in se. North America, north to NJ, OH, IL, and KS. [= C, FNA, GW, K, W, Z; = *Uniola latifolia* Michaux – RAB, F, G, HC, S, WV]

Chasmanthium laxum (Linnaeus) Yates, Slender Spikegrass. Cp (FL, GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Ip (KY): savanna-pocosin ecotones, sandhill-pocosin ecotones, moist hardwood swamps, other moist habitats; common (rare in Mountains, rare in KY Coastal Plain). June-October. Widespread in se. North America, north to s. NY, KY, and OK. See *Ch. sessiliflorum* for comments on the suggestion that these two taxa are only varietally distinct. [= C, FNA, GW, K, W, Z; = *Uniola laxa* (Linnaeus) Britton, Sterns, & Poggenburg – RAB, F, G, HC, S; = *Chasmanthium laxum* var. *laxum*]

Chasmanthium nitidum (Baldwin) Yates, Shiny Spanglegrass. Cp (AL, FL, GA, NC, SC): blackwater swamp forests; rare. September-November. A Southeastern Coastal Plain endemic: se. NC south to c. FL and west to se. AL. [= FNA, GW, K, Z; = *Uniola nitida* Baldwin – RAB, HC, S]

Chasmanthium ornithorhynchum (Steudel) Yates, Birdbill Spikegrass. Cp (AL, FL, LA, MS): blackwater swamp forests; uncommon. S. AL and w. FL Panhandle west to e. LA (Florida Parishes). Also reported for NC and SC (FNA 2003a). {investigate} [= FNA, GW, K, Z; = *Uniola ornithorhyncha* Steudel – S]

Chasmanthium sessiliflorum (Poiret) Yates var. *I*, Coastal Hammock Longleaf Spikegrass. Cp (GA, SC): calcareous hammocks; rare. August-October. An additional taxon warrants recognition: it is characterized by divergent panicle branches and occurs in outer Coastal Plain calcareous sites (J. Allison, pers. comm.). [< *Chasmanthium sessiliflorum* (Poiret) Yates – C, FNA, GW, K, Z; < *Uniola sessiliflora* Poiret – RAB, F, G, HC; < *Uniola longifolia* Scribner – S; < *Chasmanthium laxum* (Linnaeus) Yates var. *sessiliflorum* (Poiret) L. Clark]

Chasmanthium sessiliflorum (Poiret) Yates var. *sessiliflorum*, Longleaf Spikegrass. Cp (AL, GA, NC, SC, VA), Pd (GA, SC): moist hardwood forests, swamps, other moist habitats; common (uncommon north of SC). August-October. Widespread in se. North America, north to se. VA, TN, AR, and OK. This species and *Ch. laxum* are morphologically somewhat similar, but their treatment as varieties of a single species is completely unwarranted. They frequently co-occur (especially on the Gulf Coastal Plain), growing side by side, and show no sign of intergradation. [< *Chasmanthium sessiliflorum* – C, FNA, GW, K, W, Z; < *Uniola sessiliflora* Poiret – RAB, F, G, HC; < *Uniola longifolia* Scribner – S; < *Chasmanthium laxum* (Linnaeus) Yates var. *sessiliflorum* (Poiret) L. Clark]

Chloris Swartz 1788 (Finger-grass, Chloris)

[also see *Eustachys*]. Key based partly on C.

- 1 Inflorescence verticillate, typically the panicle branches in 2-5 verticels; perennial; fertile lemma inconspicuously appressed-pilose; spikelets not imbricate *Ch. verticillata*
- 1 Inflorescence digitate, the panicle branches in a single verticel at the apex of the culm; annual; lemma conspicuously long-ciliate; spikelets imbricate *Ch. virgata*

* *Chloris verticillata* Nuttall, Windmill-grass. Mt (VA), {SC}: disturbed areas, bottomland fields; rare, native of further west. [= C, F, G, HC, K]

* *Chloris virgata* Swartz, Feather Finger-grass, Showy Chloris. Pd (GA, NC, SC, VA), Cp (FL, GA): disturbed areas; rare, native of tropical America. [= RAB, C, F, G, HC, K]

* *Chloris barbata* Sw. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of {}. [= K] {FL} {not keyed}

* *Chloris canterei* Arech. var. *grandiflora* (Roseng. & Izag.) D.E. Anderson. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of Paraguay. [= K; < *Ch. cantérai* – HC] {not keyed}

* *Chloris cucullata* Bisch. Cp (FL, SC): waste areas near wool-combing mills, other disturbed areas; rare, perhaps only a waif, native of sc. United States and Mexico. [= K] {not keyed}

* *Chloris divaricata* R. Brown. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of {}. [= K] {not keyed}

* *Chloris gayana* Kunth, Rhodes Grass. Cp (FL, SC): waste areas near wool-combing mills, other disturbed areas; rare, perhaps only a waif, native of Africa. [= F, HC, K, S] {not keyed}

* *Chloris pectinata* Benth. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of {}. [= K] {not keyed}

* *Chloris truncata* R. Brown, Stargrass. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of Australia. [= HC, K] {not keyed}

* *Chloris ventricosa* R. Brown. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of Australia. Also reported for VA (Hitchcock & Chase 1950; Kartesz 1999). [= HC, K] {not keyed}

Chrysopogon Trinius 1820 (Goldbeard)

A genus of about 26 species, tropical and subtropical, all species except *Ch. pauciflorus* native to the Old World. References: Hall & Thieret in FNA (2003a); Veldkamp (1999).

Chrysopogon pauciflorus (Chapman) Benth. ex Vasey, Florida Goldbeard, Florida Rhapsis. Cp (FL, NC): sandhill; rare (NC Watch List), perhaps only introduced. FL and Cuba; its occurrence in se. NC (at Carolina Beach State Park) is plausible either as a native, disjunct occurrence or as an introduction. [= FNA, HC, K; = *Rhaphis pauciflora* (Chapman) Nash – S]

Cinna Linnaeus 1753 (Woodreed)

A genus of about 4 species, of temperate Eurasia, North America, and South America. References: Brandenburg in FNA (2007a); Brandenburg, Blackwell, & Thieret (1991); Tucker (1996)=Z; Brandenburg & Thieret (2000). [also see *Limnorea*]

- 1 Spikelets (3.5-) 4-6 (-7.5) mm long; glumes firm, subherbaceous, rather dull, hyaline only narrowly and marginally, the upper glume prominently 3-nerved *C. arundinacea*
- 1 Spikelets (2-) 2.5-4 (-5) mm long; glumes (at least the first and sometimes the second as well) glistening, hyaline except the midrib, the upper glume 1-nerved (very rarely 3-nerved) *C. latifolia*

Cinna arundinacea Linnaeus, Common Woodreed, Sweet Woodreed. Cp (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA): bottomland forests, rocky bars in rivers, other low, wet habitats; common. August-October. New Brunswick and MN south to south to GA and TX. [= RAB, C, FNA, G, GW, K, S, W, WV, Z; > *C. arundinacea* var. *inexpansa* Fernald & Griscom – F, HC]

Cinna latifolia Grisebach, Drooping Woodreed, Slender Woodreed. Mt (NC, VA): moist forests at high elevations; rare. June-August. Circumboreal, occurring in n. Eurasia and n. North America, south in North America to NC, TN, n. IL, MN, UT, NM, and CA. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

***Coelorachis* Brongniart 1831 (Jointgrass)**

A genus of about 20 species, widespread in the Old World and New World tropics and subtropics. Generic circumscription has been controversial and uncertain. References: Allen in FNA (2003a); Veldkamp, Koning, & Sosef (1986)=Z.

- 1 Culms round in cross-section.....*C. cylindrica*
- 1 Culms compressed-keeled in cross-section.
 - 2 Lower glume with rectangular pits.....*C. tesselata*
 - 2 Lower glume smooth or with transverse ridges.
 - 3 Lower glume with transverse ridges.....*C. rugosa*
 - 3 Lower glume smooth.....*C. tuberculosa*

Coelorachis cylindrica (Michaux) Nash, Carolina Jointgrass. Pd (GA, NC, SC), Cp (FL, GA): open woodlands and roadsides, probably in areas formerly prairie-like and fire-maintained, perhaps now extirpated in portion of our area (including NC); rare. June-August. Fairly widespread in se. North America, north to NC and SC (at least formerly), MS, MO, and TX. [= C, FNA, K; = *Manisuris cylindrica* (Michaux) Kuntze – RAB, F, G, GW, HC; = *Manisuris campestris* (Nuttall) A.S. Hitchcock – S; = *Mnesithea cylindrica* (Michaux) Koning & Sosef – Z]

Coelorachis rugosa (Nuttall) Nash, Wrinkled Jointgrass. Cp (FL, GA, NC, SC, VA), Pd (GA): limesink ponds (dolines), depression meadows, clay-based Carolina bays, wet savannas, disturbed areas (such as seeps in powerline rights-of-way), always in places with a seasonally high water-table; uncommon (rare in NC, SC, VA). June-October. A Southeastern Coastal Plain endemic: s. NJ south to FL and west to TX. [= C, FNA, K; = *Manisuris rugosa* (Nuttall) Kuntze – RAB, F, G, GW, HC, S; = *Mnesithea rugosa* (Nuttall) Koning & Sosef – Z]

Coelorachis tesselata (Steudel) Nash, Pitted Jointgrass. Cp (FL, GA): wet savannas and bogs; rare. Southeastern Coastal Plain endemic: sw. GA and FL west to e. LA. [= FNA, K; = *Manisuris tesselata* (Steudel) Scribner – GW, HC, S; = *Mnesithea tesselata* (Steudel) Koning & Sosef – Z]

Coelorachis tuberculosa (Nash) Nash, Smooth Jointgrass. Cp (FL, GA): pond margins; rare. Southeastern Coastal Plain endemic: sw. GA (Mitchell County) (Sorrie 1998b) west to s. AL, and in the Florida peninsula. [= FNA, K; = *Manisuris tuberculosa* Nash – GW, HC, S; = *Mnesithea tuberculosa* (Nash) Koning & Sosef – Z]

***Coix* Linnaeus 1753 (Job's-tears)**

A genus of about 5 species, native to tropical Asia. References: Thieret in FNA (2003a).

* *Coix lacryma-jobi* Linnaeus, Job's-tears, reported for se. PA by Rhoads & Klein (1993), TN (Thieret in FNA 2003a), and NJ (Kartesz 1999). [= FNA, K]

***Cortaderia* Stapf 1897 (Pampasgrass)**

A genus of ca. 20 species, native to South America. References: Allred in FNA (2003a).

* ***Cortaderia selloana*** (J.A. & J.H. Schultes) Ascherson & Graebner, Pampasgrass. Cp (GA, SC), Pd (GA): disturbed areas; rare, native of South America. This grass is a popular ornamental, rarely escaping. [= RAB, FNA, HC, K]

***Ctenium* Panzer 1813 (Toothache Grass)**

A genus of about 20-22 species, of tropical and subtropical Africa and the Americas. References: Barkworth in FNA (2003a); Longhi-Wagner & Renvoize (2004).

- 1 Spikelets with numerous glands in rows on the back of the second glume; plant short-rhizomatous (nearly cespitose); [widespread in the Coastal Plain].....*Ct. aromaticum*
- 1 Spikelets with very few or no glands on the back of the second glume; plant rhizomatous (the rhizomes slender and scaly); [restricted to se. GA and ne. FL].....*Ct. floridanum*

Ctenium aromaticum (Walter) Wood, Toothache Grass, Orange Grass. Cp (FL, GA, NC, SC, VA): wet savannas, pocosin-savanna ecotones, seepage bogs, sandhill-pocosin ecotones, sandhill seeps; common (rare in VA). June-August (or later in response to late summer fires). Southeastern Coastal Plain endemic: se. VA south to FL and west to LA and e. TX (Singhurst, Keith, & Holmes 2005). The entire plant is aromatic and numbs the mouth, tongue, and lips when chewed, hence the specific epithet and common names. Like many species of the longleaf pine ecosystem, toothache grass generally flowers only following fire (MacRoberts & MacRoberts 1992). Sterile clumps can be recognized by the rather broad, bicolored leaves (bluish on the upper surface, bright green on the lower surface). [= RAB, C, F, FNA, G, GW, HC, K; = *Campulosus aromaticus* (Walter) Trinius – S]

Ctenium floridanum (A.S. Hitchcock) A.S. Hitchcock, Florida Toothache Grass. Cp (FL, GA): dry pinelands, sandhills, upper ecotones of pineland pools; rare. June-September. Southeastern Coastal Plain endemic: se. GA to ne. FL. Like *Ct. aromaticum*, generally flowering only following fire. [= FNA, GW, HC, K; = *Campulosus floridanus* A.S. Hitchcock – S]

Cynodon L.C. Richard 1805 (Bermuda Grass)

A genus of ca. 9 species, native to the tropical Old World. References: Barkworth in FNA (2003a).

* ***Cynodon dactylon*** (Linnaeus) Persoon var. *dactylon*, Bermuda Grass, Scutch Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Ip (KY): lawns, gardens, roadsides, pastures, fields, disturbed areas; common, native of Eurasia. May-October. [= FNA; < *C. dactylon* – RAB, C, F, G, HC, K, W, WV; < *Capriola dactylon* (Linnaeus) Kuntze – S]

Cynosurus Linnaeus 1753 (Dogtail)

A genus of 8 species, annuals and perennials, native of the Mediterranean region and w. Asia. References: Long in FNA (2007a); Tucker (1996)=Z.

- 1 Panicle linear-oblong, 1-10 (-14) cm long, 0.4-1 cm wide; leaves 1-3 (-4) mm wide; perennial; fertile lemma 3-4 mm long, plus a 0-1 mm long mucro; [section *Cynosurus*] *C. cristatus*
 1 Panicle ovoid, 1-4 (-8) cm long, 0.7-2 cm wide; leaves (2-) 3-10 mm wide; annual; fertile lemma 4.5-7 mm long, plus a 6-16 mm long awn; [section *Falona*]..... *C. echinatus*

* ***Cynosurus cristatus*** Linnaeus, Crested Dogtail. Mt (NC), {VA?}: lawns, roadsides; rare, native of Eurasia. June-July. [= RAB, C, F, FNA, G, HC, K, WV, Z]

* ***Cynosurus echinatus*** Linnaeus, Rough Dogtail, Bristly Dogtail. Cp (NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA): lawns, roadsides; rare, native of Eurasia. May-June. [= RAB, C, F, FNA, HC, K, WV, Z]

Dactylis Linnaeus 1753 (Orchard Grass)

A genus of 1 variable species, perennial, native of Eurasia. References: Allred in FNA (2007a); Tucker (1996)=Z.

* ***Dactylis glomerata*** Linnaeus, Orchard Grass, Cock's-foot. Mt (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Ip (KY), Cp (FL, KY, NC, SC, VA): pastures, fields, woodland edges, roadsides; common (rare in FL, uncommon in NC, SC, and GA Coastal Plain), native of Europe. May-October. In Europe there are various chromosome races, often accorded subspecies or species status. Their status in North America has been little investigated. See various references cited in Tucker (1996) for further information about these taxa in Europe. [= RAB, C, FNA, G, HC, S, W, WV; > *D. glomerata* var. *glomerata* – F; > *D. glomerata* var. *detonsa* Fries – F; > *D. glomerata* var. *ciliata* Petermann – F; > *D. glomerata* ssp. *glomerata* – K, Z; > *D. glomerata* ssp. *aschersoniana* (Graebner) Thellung – K; > *D. aschersoniana* Graebner] {FL}

Dactyloctenium Willdenow 1809 (Crowfoot Grass)

A genus of 1-13 species, of Africa and Australia. References: Hatch in FNA (2003a).

- 1 Panicle branches 1.5-6 cm long, well-separated from each other at their tips *D. aegyptium*
 1 Panicle branches 0.4-1.5 cm long, the spikelets of each mostly in contact with the spikelets of adjacent branches *D. radulans*

* ***Dactyloctenium aegyptium*** (Linnaeus) Willdenow, Crowfoot Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): lawns, roadsides, disturbed areas; common (rare in VA), native of Old World tropics. June-November. [= RAB, C, F, FNA, G, HC, K, S]

* ***Dactyloctenium radulans*** (R. Brown) Palisot de Beauvois, Buttongrass. Cp (SC): waste areas at wool-combing mills; rare, native of Australia. May-July. Collected repeatedly from 1957-1960 at the Santee Wool Combing Mill, Jamestown, Berkeley County, SC. [= FNA, K]

Danthonia A.P. de Candolle 1805 (Oat-grass)

A genus of about 20 species, of North America, Europe, and the Americas, but the generic limits are unclear. References: Darbyshire in FNA (2003a).

- | | | |
|---|--|---------------------|
| 1 | Lemma teeth (flanking the awn) 0.8-1.8 mm long, triangular, acuminate; glumes 8-13 mm long | <i>D. spicata</i> |
| 1 | Lemma teeth (flanking the awn) (1.8-) 2.0-4.5 mm long, setaceous; glumes 9-19 mm long. | |
| 2 | Lemma awn 4-10 mm long; glumes 9-13 mm long | <i>D. compressa</i> |
| 2 | Lemma awn 11-18 mm long; glumes 11-19 mm long. | |
| 3 | Sheaths villous; lemmas herbaceous in texture, villous on the back and sides; awn twisted at base several times, forming an awn column 2.5-3 mm long | <i>D. sericea</i> |
| 3 | Sheaths glabrous; lemmas membranaceous in texture, villous only on the margins and towards the base; awn twisted at base a single time, forming a loose awn column 0.5-1.5 mm long | <i>D. epilis</i> |

Danthonia compressa Austin ex Peck, Mountain Oat-grass. Mt (GA, KY, NC, SC, TN, VA), Pd (GA, NC, SC, VA), Cp (VA), Ip (KY, TN): grassy balds, thin soils around rock outcrops, woodlands; common (uncommon in upper Piedmont, rare in Coastal Plain and Interior Low Plateau). June-August. Fairly widespread in e. North America, primarily Appalachian, from s. Canada to SC and TN. [= RAB, C, F, FNA, G, HC, K, S, W, WV] {TN}

Danthonia epilis Scribner, Bog Oat-grass. Cp (NC, SC, VA), Mt (AL, GA, NC, TN, VA?), Pd (NC): peaty bogs in the Coastal Plain and Mountains, seeps around rock outcrops in the Piedmont and Mountains, granitic domes; rare. April-June. The range is apparently bogs in pinelands from NJ to SC, in mountain bogs in NC, VA (?), and GA, in seepage in the Cumberland Plateau and Blue Ridge of TN and AL. This taxon appears to be valid, with a distinct range, habitat, and variety of morphologic characters separating it from *D. sericea*, but further study is needed. Material from the mountains seems to differ from Coastal Plain material. RAB's description of the habitat as "dry woods, rare; pied. of N.C." appears to be in error. Blomquist listed the taxon (as a variety) for bogs in the mountains of sw. NC. It has since been found in bogs in the Sandhills region of NC and in seepage bogs in the adjacent Piedmont. [= F, HC, K, S; = *D. sericea* var. *epilis* (Scribner) Blomquist – RAB, C; < *D. sericea* Nuttall – FNA]

Danthonia sericea Nuttall, Silky Oat-grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, TN, VA), Ip (KY, TN): dry woodlands, especially common in sandy soils in the Coastal Plain, dry oak, oak-pine, and pine forests in the Piedmont and low Mountains; common (uncommon in the Mountains and Interior Low Plateau). April-June. Primarily a Coastal Plain species northwards, ranging from e. MA south to FL and west to LA. [= F, HC, K, S, W; = *D. sericea* var. *sericea* – RAB, C, G; < *D. sericea* – FNA] {AL, LA, MS}

Danthonia spicata (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes, Poverty Oat-grass. Mt (GA, KY, NC, SC, TN, VA), Pd (GA, NC, SC, VA), Cp (FL, KY, NC, SC, TN, VA), Ip (KY, TN): dry woodlands, rock outcrops, shale barrens; common (rare in FL). May-July. Newfoundland and British Columbia south to FL and NM. [= RAB, C, FNA, G, HC, K, S, W, WV; > *D. spicata* var. *longipila* Lamson-Scribner & Merrill – F; > *D. spicata* var. *spicata* – F; < *D. allenii* Austin – F]

Deschampsia Palisot de Beauvois 1812 (Hairgrass)

A genus of about 20-40 species, perennials and annuals, north and south temperate. References: Barkworth in FNA (2007a); Tucker (1996)=Z. [also see *Avenella*]

- | | | |
|---|--|--|
| 1 | Awn 4-8 mm long, geniculate, exerted beyond the tips of the glumes; lemmas minutely scabrous, dull; leaf blades involute, appearing filiform (rounded in cross-section); ligule 0.5-3 (-5) mm long; [section <i>Avenaria</i>] | [see <i>Avenella</i>] |
| 1 | Awn 2-3 mm long, straight or nearly so, scarcely (or not at all) exerted beyond the tips of the glumes; lemmas smooth, shiny; leaf blades flat or folded at the midvein (V-shaped in cross-section); ligule 3-10 (-17) mm long | <i>D. cespitosa</i> ssp. <i>glauca</i> |

Deschampsia cespitosa (Linnaeus) Palisot de Beauvois ssp. *glauca* (Hartman) Hartman, Tufted Hairgrass. Mt (NC, VA), Ip (KY): thin soil of rock outcrops or barrens over calcareous, mafic, and ultramafic rocks (such as serpentized olivine, amphibolite, limestone, and dolostone); rare (NC Rare, VA Rare). June-July. *D. cespitosa* is a complex species, with a complicated polyploid and aneuploid series, variously subdivided (or not) by various taxonomists. As a whole, *D. cespitosa* is circumboreal, ranging south in North America to NJ, sw. NC, WV, c. KY, IL, MN, and AZ. Ssp. *glauca* is the most widespread American subspecies, and extends the farthest south. Other subspecies occur farther north and in Eurasia. In our area, *D. cespitosa* is at its southern limit and is a rare species limited to barrens and outcrops over mafic or ultramafic rocks. Barkworth in FNA (2007a) states that there is no legitimate name available for this taxon. [= K; = *D. caespitosa* var. *glauca* (Hartman) Lindman f. – RAB, F, WV; < *D. cespitosa* ssp. *cespitosa* – FNA; < *D. cespitosa* – C, Z; < *D. cespitosa* var. *cespitosa* – G; < *D. caespitosa* var. *caespitosa* – HC; = *D. cespitosa* ssp. *cespitosa* var. *glauca* (Hartman) Lindman f.; < *Aira caespitosa* Linnaeus – S; < *D. caespitosa* – W]

* *Deschampsia elongata* (Hooker) Munro, Slender Hairgrass. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of w. North America. [= FNA, HC, K] {not keyed}

Desmazeria Dumortier 1822

A genus of about 7 species, annuals, native of the Mediterranean region. References: Tucker in FNA (2007a); Soreng et al. (2003)=Z.

* *Desmazeria rigida* (Linnaeus) Tutin, Fern Grass. Cp (FL, SC): waste areas around wool-combing mills, other disturbed areas; rare, perhaps only a waif, native of Mediterranean Europe. [= FNA, K; = *Catapodium rigidum* (Linnaeus) Dony – Z; = *Scleropoa rigida* (Linnaeus) Grisebach]

Diarrhena Palisot de Beauvois 1812 (Beakgrass)

Depending on circumscription, a genus of either 2 species of perennial grasses of e. North America, or of ca. 6 species of e. North America and e. Asia. References: Brandenburg in FNA (2007a); Brandenburg, Estes, & Collins (1991)=Z. Key from Z.

- 1 Callous pubescent on all mature lemmas except the first; lemmas widest below the middle and gradually tapering into a cusp at the apex, those of the first floret 7.1-10.8 mm long; mature fruit 1.3-1.8 mm broad, gradually tapering into a broad, blunt beak*D. americana*
 1 Callous glabrous on all mature lemmas; lemmas widest near or above the middle and more-or-less abruptly contracted into a cusp at the apex, those of the first floret 4.6-7.5 mm long; mature fruit 1.8-2.5 mm broad, abruptly contracted into a bottlenose-shaped beak*D. obovata*

Diarrhena americana Palisot de Beauvois, Eastern Beakgrass. Ip (KY, TN), Mt (GA, NC, TN, VA): rich moist forests, usually over calcareous rocks; uncommon (rare in NC and VA, rare in TN Mountains). July-August; August-October. W. VA and WV west to IN, south to TN, sw. NC, and nw. GA (Jones & Coile 1988); disjunct in MO. [= K, Z; = *Diarrhena americana* var. *americana* – C, G, WV; < *Diarrhena americana* – F, HC, W (also see *Diarrhena obovata*); < *Diarina festucoides* Rafinesque – S (also see *Diarrhena obovata*)]

Diarrhena obovata (Gleason) Brandenburg, Western Beakgrass. Pd (VA), Ip (KY, TN): alluvial forests, other moist forests; rare. July-August; August-October. Sw. PA and IN west to SD, KA, south to w. VA, c. TN, and ne. TX. First reported for VA by Fleming & Ludwig (1996). The floodplain of the Potomac River (in Fairfax County, VA) has a number of disjuncts of species with more midwestern affinities, including *Diarrhena obovata*, *Erigenia bulbosa*, *Valeriana pauciflora*, and *Erythronium albidum* (Fleming & Ludwig 1996). [= K, Z; = *Diarrhena americana* var. *obovata* Gleason – C, G, WV; < *Diarrhena americana* – F, HC, W; < *Diarina festucoides* Rafinesque – S]

Dichantherium (A.S. Hitchcock & Chase) Gould 1974 (Witch-grass)
(by Richard J. LeBlond)

A genus of 70-100 species, perennials, of temperate and tropical America. References: Gould and Clark (1978)=Z; Freckmann (1981)=Y; Lelong (1984)=X; LeBlond (2001)=Q; Davidse and Polh (1992); Hansen & Wunderlin (1988); Hitchcock & Chase (1910); Freckmann & Lelong (2002). The treatment of *Dichantherium* sect. *Lanuginosa* (= *D. acuminatum* group) is based closely on Y. The contributor must take responsibility for the treatment of sect. *Angustifolia* (including *D. hirstii*), sections *Dichotoma* and *Ensifolia* (the *D. dichotomum* group), and for sect. *Lancearia*. Other treatments are based largely on Z.

"We admit that our failure to distinguish the several named taxa ... was born of despair!" – Godfrey & Wooten (1979).

"The recognition of only four species and six varieties in this complex [*sabulorum*] to which almost 50 species names have been applied admittedly is somewhat arbitrary and certainly not entirely satisfactory." – Gould & Clark (1978).

Identification notes: *Dichantherium* has often been treated as subgenus *Dichantherium* of *Panicum*. It is most readily (though not consistently) separated from *Panicum* by the following combination of features: plants producing over-wintering rosettes of leaves often shorter and broader than the culm leaves; plants producing simple culms with terminal panicles in spring, the culms branching and producing panicles only on branches in the summer and autumn.

Perhaps the most complex and confusing genus in our region, *Dichantherium* requires careful collection and close observation of several characters to determine to which taxon a specimen belongs, or at least to which taxa it seems most closely aligned. A taxon that is distinct in one part of its range may be indistinguishable from another taxon elsewhere. This is particularly true of Coastal Plain species adapted to natural (and now human) disturbances. Although hybridization is frequently suspected in *Dichantherium*, documentation of natural hybrids is rare.

When collecting specimens in the field, mature spikelets are essential. This is determined by examining the usually whitish fertile lemma, which is firm and plump at maturity. Immature spikelets often are longer than mature ones (they shorten as they fatten); only mature spikelet length is used in the various manuals and keys. It is also important to note whether a plant is in its "vernal" or "autumnal" fruiting phase before collecting. "Vernal" plants produce panicles only at the summits of the culms (typically April-June). "Autumnal" plants produce panicles from leafy axillary branches below the summit (typically July-September). The autumnal panicles in most species are much smaller than the vernal panicles (and often hidden by fascicled leaves), but the spikelets are the same. When collecting autumnal plants, it is important to select specimens still possessing their vernal leaf blades and panicles, even though these will likely be senescent. It is also important to collect the whole plant, with the basal rosette intact (whether senescent or of current year's growth). When several plants are growing together, compare the culm, leaf, and spikelet features for differences; *Dichantherium* taxa are gregarious.

When analyzing the character of the culm internodes and nodes, look at the first elongate internode above the base (the lowest internode is often very short and uncharacteristic). Determining whether a node is bearded is often difficult. A bearded node usually is characterized by pubescence that is longer and of a different orientation or structure than that of the internodes and sheaths. Nodes with short pubescence

generally are not regarded as bearded. Lower nodes are more likely to be bearded than upper nodes. When analyzing sheaths, look at those on the lower half of the culm. Senescent vernal sheaths often lose their pubescence (though in some species hair papillae are evident). All references in the key to sheath glabrousness or pubescence is without regard to the presence or absence of marginal hairs (cilia). A sheath that is glabrous except for marginal cilia is called glabrous. All culm leaves should be analyzed for blade characters; in general, the key relies on the size and character of the vernal blades. A "cordate" blade is one where the basal lobes of the blade extend outward and partially surround the culm when the culm is enclosed by the sheath. As with sheaths, references in the key to blade glabrousness or pubescence is without regard to marginal cilia. The ligule is an important diagnostic character for many *Dichanthelium* taxa; at least three ligules per specimen should be examined before making conclusions about its structure and length. Ligules form a distinct ring from a cartilaginous base at the inner summit of the sheath; in some species the ligule is membranous, but in most it is pubescent. Care must be taken to distinguish the pubescence of the ligule from any pubescence emanating from the inner surface of the blade base, and from marginal cilia. Ligules of senescent vernal leaves frequently lose their integrity. Spikelet shape as well as length should be determined only from mature spikelets. Measure the length from the base of the first glume (usually at an articulation) to the apex of the second glume or sterile lemma (whichever is longer). A micrometer is essential for determining the length of spikelets, first glumes, ligules, and various pilosity features. Sometimes one-tenth of a millimeter is all that separates two *Dichanthelium* taxa.

Certain characters, particularly node bearding, cordate/non-cordate blade bases, and ligule length, can be quite variable, and an effort has been made to account for this variability in the key. Nonetheless, some specimens just won't "fit," and the road not taken may have to be reconsidered.

- 1 Plants densely tufted, often cushion-forming; leaves basally disposed, the blades ascending or spreading-ascending, not forming a distinct rosette of basal leaves shorter than the culm leaves; autumnal culms branching basally or from the lower nodes **Key A**
- 1 Plants less densely or sparsely tufted, not cushion-forming; leaves well-distributed on the culm, usually much longer than the short, often broad and spreading basal rosette leaves; autumnal culms usually branching from the mid and upper nodes.
 - 2 Spikelets 3.3-5.2 mm long **Key B**
 - 2 Spikelets 0.8-3.2 mm long.
 - 3 Spikelets 0.8-2.0 mm long.
 - 4 Lower culm internodes variously hairy **Key F**
 - 4 Lower culm internodes glabrous **Key G**
 - 3 Spikelets 2.1-3.2 mm long.
 - 5 Larger culm blades 13-25 mm wide **Key C**
 - 5 Larger culm blades < 13 mm wide.
 - 6 Culm nodes (at least the lower) bearded **Key D**
 - 6 Culm nodes not bearded, the lowermost sometimes puberulent or sparsely hairy **Key E**

**Key A - Plants densely tufted, often cushion-forming; leaves basally disposed,
the blades ascending or spreading-ascending,
not forming a distinct rosette of basal leaves
shorter than the culm leaves;
autumnal culms branching basally or from the lower nodes**

- 1 Spikelets 2.4-4.5 mm long.
 - 2 Nodes, internodes, and sheaths glabrous; blades 4-13 cm, 5-8 mm, the surfaces smooth, glabrous; spikelets 2.4-2.9 mm long, glabrous; not known to produce axillary (autumnal) inflorescences [*D. nudicaule*]
 - 2 Nodes bearded or otherwise pubescent; internodes and sheaths variously pubescent to glabrate; blades 6-35 cm, 2-5 mm, one or both surfaces scabrous and often pubescent; spikelets 1.7-4.5 mm long, glabrous or pubescent; plants produce axillary (autumnal) inflorescences.
 - 3 Spikelets 2.8-3.8 (-4.5) mm long, the second glume and sterile lemma pointed or beaked and extended beyond the summit of the fertile lemma; first glume 1.2-2 mm long *D. depauperatum*
 - 3 Spikelets 1.7-2.8 mm long, the second glume and sterile lemma blunt or broadly pointed, not extending beyond the summit of the fertile lemma; first glume 0.7-1.2 mm long *D. linearifolium*
- 1 Spikelets 0.9-2.3 mm long.
 - 4 Longer blades > 6 cm; if only 6 cm, then sheaths retrorsely long-pilose (*D. laxiflorum*).
 - 5 Spikelets 1.2-1.5 mm long, glabrous [*D. dichotomum* var. *glabrifolium*]
 - 5 Spikelets 1.7-2.3 (-2.8) mm long, pubescent.
 - 6 Longer blades 10-35 cm long, 2-4 mm wide; sheaths glabrous to variously pilose, but not conspicuously retrorsely long-pilose; nodes variously pubescent to glabrate; spikelets 1.7-2.3 (-2.8) mm long *D. linearifolium*
 - 6 Longer blades 6-18 cm long, 7-12 mm wide; sheaths conspicuously retrorsely long-pilose; nodes bearded with retrorse or spreading hairs; spikelets 1.9-2.3 mm long *D. laxiflorum*
 - 4 Longer blades 1.5-6 cm; sheaths glabrous or pubescent, but not retrorsely long-pilose.
 - 7 Blades 1-3 mm wide, glabrous, eciliate or basally ciliate; spikelets 0.9-1.4 mm long.
 - 8 Spikelets pubescent, 1.2-1.4 mm long; blades involute, often falcate, 2.5-6 cm long [*D. chamaelonche* ssp. *breve*]
 - 8 Spikelets glabrous, 0.9-1.2 mm long; blades flat, not falcate, 1.5-4 (-5) cm long *D. chamaelonche* ssp. *chamaelonche*
 - 7 Blades 3-8 mm wide; spikelets 1.1-2.1 mm long (if < 1.5 mm, then blades either pubescent on one or both surfaces or ciliate to the apex).
 - 9 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous *D. strigosum* var. *leucoblepharis*
 - 9 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
 - 10 Blades pilose; spikelets 1.1-1.6 mm long *D. strigosum* var. *strigosum*
 - 10 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long *D. strigosum* var. *glabrescens*

Key B - Spikelets 3.3-5.2 mm long

- 1 Nodes (at least lower) densely bearded with retrorse hairs; spikelets 3.7-5.2 mm long.
 - 2 Ligule 2.5-4 mm long; internodes pubescent with long ascending or spreading hairs; blades 8-15 cm long, 10-25 mm wide; first glume 1.8-2.5 mm long *D. ravenelii*
 - 2 Ligule 0.4-0.9 (-1.3) mm long; internodes glabrous to puberulent; blades 7-12 cm long 12-40 mm wide; first glume 1.5-2.2 mm long..... *D. boscii*
- 1 Nodes glabrous, pubescent, or sparsely pilose; spikelets (2.4-) 3.3-4.2 mm long.
 - 3 Ligule 1.6-3 mm long; blades 4-9 mm wide, > 10× as long as wide *D. oligoanthes* var. *oligoanthes*
 - 3 Ligule 0.3-1.5 mm long; if larger blades < 9 mm wide and mostly 15× or more as long, then ligule 0.5-1 mm long (*D. fusiforme*).
 - 4 Larger blades 2-6 (-8) mm wide, mostly 15× or more as long as wide; spikelets fusiform to elliptic, acute, basally constricted *D. fusiforme*
 - 4 Larger blades 6-35 mm wide, mostly 10× or less as long as wide; spikelets broadly elliptic to obovate, rounded to sub-acute, not basally constricted.
 - 5 Spikelets strongly papillose-hispid with spreading hairs 0.5-1 mm long; blades papillose-hispid..... [*D. leibergii*]
 - 5 Spikelets glabrous to pubescent with hairs < 0.5 mm long; blades glabrous, scabrous, or pubescent.
 - 6 Ligules 1-1.5 mm long; blades 5-10 cm long by 6-15 mm wide, glabrous or pubescent, basally rounded; spikelets glabrous to pubescent..... *D. oligoanthes* var. *scribnerianum*
 - 6 Ligules 0.3-1 mm long; blades 7-35 cm long by 8-35 mm wide, glabrous or scabrous, basally cordate or rounded; spikelets pubescent to glabrate.
 - 7 Sheaths (at least lower) papillose-hispid with spreading hairs; ligule 0.5-1.2 mm long, an eciliate membrane; culm blades 10-28 cm long; spikelets 2.4-3.6 mm long; first glume 1.2-1.8 mm long..... *D. clandestinum*
 - 7 Sheaths glabrous or pubescent (the upper papillose-pubescent in *D. xanthophysum*); ligules 0-0.7 mm long, ciliate if more than 0.3 mm long; culm blades 5-18 cm long; spikelets 2.2-4.1 mm long; first glume 0.7-2.6 mm long.
 - 8 Upper sheaths glabrous to softly villous basally; ligules 0.4-0.7 mm long, ciliate; culm blades 15-40 mm wide, the bases cordate-clasping; panicle usually more than half as wide as long *D. latifolium*
 - 8 Upper sheaths glabrous, puberulent, or papillose-pubescent; ligules 0-0.5 mm long, eciliate or ciliate; culm blades 5-25 mm wide, the bases cordate-clasping or rounded; panicles less or more than half as wide as long.
 - 9 Upper sheaths glabrous or puberulent; ligules 0.1-0.3 mm long, eciliate; culm blade bases cordate-clasping; panicles usually more than half as wide as long; spikelets 2.2-3.7 mm long, ellipsoid, pointed ... *D. commutatum* var. *commutatum*
 - 9 Upper sheaths papillose-pubescent; ligules 0.3-0.5 mm long, ciliate; culm blade bases rounded; panicles usually less than half as wide as long; spikelets 3.2-4.1 mm long, obovoid, blunt..... [*D. xanthophysum*]

Key C - Spikelets 2.1-3.2 mm long, larger leaves 13-25 mm wide

- 1 Culm nodes, at least the lower, bearded (often retrorsely).
 - 2 Ligule a stramineous to light brown membrane (with or without ciliate or lacerate extensions); peduncle and often internodes scabrous *D. scabriusculum*
 - 2 Ligule entirely of white hairs; peduncle and internodes either smooth or densely hairy (velvety).
 - 3 Lower internodes glabrous, without a viscid band below the nodes; larger blades 7-14 mm wide..... *D. dichotomum* group
 - 3 Lower internodes densely hairy except for a viscid band below the nodes; larger blades 10-20 mm wide..... *D. scoparium*
- 1 Culm nodes glabrous or slightly hairy, but not bearded.
 - 4 Second glume and sterile lemma acute to short-acuminate, conspicuously longer than the fertile lemma; spikelets glabrous (occasionally sparsely pubescent in *D. scabriusculum*).
 - 5 Panicle rachis pellucid-punctate; ligule a stramineous to light brown membrane, with or without terminal ciliations; peduncle and often internodes scabrous; first glume 0.3-0.6 (-0.8) mm long, reniform to suborbicular..... *D. scabriusculum*
 - 5 Panicle rachis not pellucid-punctate; ligule entirely of white hairs; peduncle and internodes smooth; first glume 0.7-1.2 mm long, ovate to lanceolate..... *D. yadkinense*
 - 4 Second glume and sterile lemma blunt to subacute, shorter than, equaling, or barely exceeding the fertile lemma; spikelets pubescent (sometimes sparsely so in *D. clandestinum*).
 - 6 Sheaths, at least the lower, papillose-hispid with spreading hairs; blades 10-28 cm long..... *D. clandestinum*
 - 6 Sheaths glabrous, puberulent, finely pubescent, or sparsely pilose; blades 5-18 cm long.
 - 7 Ligule 0-0.3 mm long; spikelets 2.2-3.7 mm long, 1.1-1.3 mm wide; first glume 0.6-2.6 mm long..... *D. commutatum* var. *commutatum*
 - 7 Ligule 0.4-0.7 mm long; spikelets 2.9-3.9 mm long, 1.6-2.0 mm wide; first glume 1.5-2.2 mm long..... *D. latifolium*

Key D - Spikelets 2.1-3.2 mm long, larger culm blades < 13 mm wide, at least the lower culm nodes bearded with a usually spreading-ascending collar of dense and/or longish hairs

- 1 Ligule with a dense ring of short hairs 0.5-1 mm long in front of a usually less dense ring of longer hairs (pseudoligule) 1-5 mm long.
 - 2 Nodes retrorsely bearded; internode and sheath hairs spreading to retrorse; blade surfaces velvety-pubescent or long-pilose.
 - 3 Spikelets 2.5-3.2 mm long; longer hairs of pseudoligule 1-3 mm long; blade surfaces velvety-pubescent; panicle rachis densely pubescent; [of cedar glades and dry limestone soils] [*D. malacophyllum*]
 - 3 Spikelets 1.8-2.5 mm long; longer hairs of pseudoligule 3-5 mm long; blade surfaces long-pilose; panicle rachis sparsely pilose; [of dry sandy soil of pine and oak woodlands] *D. villosissimum* var. *villosissimum*
 - 2 Node beard hairs spreading to ascending; internode and sheath hairs ascending to appressed; blade surfaces glabrate to appressed-pubescent.
 - 4 Spikelets 2.5-3.1 mm long; lower culm blades usually glabrous adaxially except for long hairs at or near the margin (appearing ciliate), appressed-pubescent abaxially..... *D. ovale* var. *ovale*
 - 4 Spikelets 2.1-2.6 mm long; lower culm blades usually sparsely appressed-pubescent on both surfaces, eciliate or ciliate at the base only. *D. ovale* var. *addisonii*
- 1 Ligule a single structure, without a pseudoligule.
 - 5 Ligule 2-5 mm long, ciliate *D. acuminatum* group

- 5 Ligule < 2 mm long, ciliate or membranous.
- 6 Ligule a stramineous to light brown membrane, with or without terminal ciliations; peduncle scabrous but not hairy.
- 7 Panicle rachis smooth, pellucid-punctate; first glume 0.3-0.6 (-0.8) mm; larger leaves 10-25 cm long, 8-15 mm wide; ligule 0.5-1.3 mm long; lowest elongate culm internode > 2 mm in diameter; lowest nodes usually glabrous or pubescent *D. scabriusculum*
- 7 Panicle rachis scabrous, not pellucid-punctate; first glume 0.7-1.1 mm long; larger leaves 7-12 cm long, 6-9 mm wide; ligule 0.3-0.6 mm long; lowest elongate culm internode < 1.7 mm in diameter; lowest nodes usually retrorsely bearded *D. species 9 (= cryptanthum)*
- 6 Ligule entirely of white hairs; peduncle variously hairy or glabrous, but not scabrous.
- 8 Culms to 1.5 m tall, with a broad, glabrous, viscid band below the nodes; blades of the lower leaves typically villous or velvety-pubescent *D. scoparium*
- 8 Culms rarely exceeding 1 m, without a viscid band below the nodes; blades various.
- 9 Sheaths retrorsely pilose with hairs 2-3 mm long; basal leaves usually numerous, ascending, similar in size and shape to the culm leaves; culms branching only at the base *D. laxiflorum*
- 9 Sheaths glabrous or pilose (if pilose, then hairs not both retrorse and 2-3 mm long); basal leaves rosette-forming, usually much smaller than the culm leaves; culms branching at the nodes in age.
- 10 Culm internodes glabrous to sparsely pilose; culm nodes bearded with long retrorse hairs; blade surfaces glabrous to velvety-pubescent *D. dichotomum group*
- 10 Culm internodes, at least the lower, strigose, pilose, or villous; culm nodes bearded with ascending or spreading hairs; blade surfaces glabrous or variously hairy.
- 11 Lower nodes bearded with erect-ascending, soft, and long hairs; mid-culm blades usually 20× or more as long as wide.
- 12 Spikelets 2.9-4.0 mm long, fusiform to elliptic, acute, basally constricted; first glume 1.4-2.6 mm long *D. fusiforme*
- 12 Spikelets 1.5-3.1 mm long, obovate to elliptic-obovate, obtuse to sub-acute, not basally constricted; first glume 0.6-1.5 mm long.
- 13 Spikelets 1.5-2.2 mm long; first glume 0.6-0.8 mm long; blades to 8 cm long, usually involute *D. aciculare*
- 13 Spikelets 2.1-3.1 mm long; first glume 0.8-1.5 mm long; blades to 12 cm long, usually flat except at tip *D. angustifolium*
- 11 Lower and often mid-culm nodes bearded with spreading, stiffish, and short-to-long hairs; mid-culm blades usually 15× or less as long as wide.
- 14 Blades stiff, often longitudinally ribbed, at least the lower villous or strongly pilose on the abaxial surface, and usually strongly pilose at least basally on the adaxial surface *D. consanguineum*
- 14 Blades not noticeably stiff nor longitudinally ribbed, pubescent or strigose underneath, glabrous above or with a few long hairs near the base.
- 15 Spikelets 2.5-3.1 mm long; lower culm blades usually glabrous adaxially except for long hairs at or near the margin (appearing ciliate), appressed-pubescent abaxially *D. ovale var. ovale*
- 15 Spikelets 2.1-2.6 mm long; lower culm blades usually sparsely appressed-pubescent on both surfaces, eciliate or ciliate at the base only *D. ovale var. addisonii*

**Key E - Spikelets 2.1-3.2 mm long,
larger culm blades < 13 mm wide, culm nodes not bearded,
the lowermost sometimes puberulent or sparsely pilose**

- 1 Ligule 1.6-4 mm long *D. oligoanthes var. oligoanthes*
- 1 Ligule < 1.5 mm long.
- 2 Blades, at least the lower, cordate or subcordate at the base, mostly 6-12 mm wide.
- 3 Spikelets obpyriform when viewed dorsally, strongly plano-convex when viewed laterally, usually markedly reddish-purple basally; fertile lemma papillose *D. species 2 (= webberianum)*
- 3 Spikelets elliptic to elliptic-obovoid when viewed dorsally or laterally, greenish to faintly purple-tinged basally; fertile lemma not papillose.
- 4 Lowermost internodes crisp-puberulent; ligules 0-0.3 mm long, eciliate; larger culm blades 4-8 (-11) cm long, 5-10 (-12) mm wide, broadest near the base; spikelets 2.1-2.7 mm long; first glumes 0.7-0.9 mm long *D. commutatum var. ashei*
- 4 Lowermost internodes glabrous to sparsely pubescent; ligules either 0-0.3 mm long and eciliate, or about 0.5 mm long and ciliate; larger culm blades 5-16 mm long, 6-25 mm wide, broadest above the base or broadly linear; spikelets 2-3.7 mm long; first glumes 0.5-2.6 mm long.
- 5 Ligule 0-0.3 mm long, eciliate; larger culm blades 5-25 mm wide; spikelets 2.2-3.7 mm long; first glumes 0.6-2.6 mm long *D. commutatum var. commutatum*
- 5 Ligule about 0.5 mm long, ciliate; larger culm blades 6-13 mm wide; spikelets 2-3 mm long; first glumes 0.5-1 mm long *D. boreale*
- 2 Blades tapering to the base, 2-12 mm wide.
- 6 Ligule a stramineous to light brown membrane, with or without terminal ciliations.
- 7 Panicle rachis smooth, pellucid-punctate; first glume 0.3-0.6 (-0.8) mm long; larger leaves 10-25 cm long, 8-15 mm wide; ligule 0.5-1.3 mm long; lowest elongate culm internode > 2 mm in diameter; lowest nodes usually glabrous or pubescent *D. scabriusculum*
- 7 Panicle rachis scabrous, not pellucid-punctate; first glume 0.7-1.1 mm long; larger leaves 7-12 cm long, 6-9 mm wide; ligule 0.3-0.6 mm long; lowest elongate culm internode < 1.7 mm in diameter; lowest nodes usually retrorsely bearded *D. species 9 (= cryptanthum)*
- 6 Ligule of short white hairs or absent.
- 8 Leaves basally disposed, usually matted or cushion-forming, larger than the mid and upper culm leaves; blade margins uniformly papillose-ciliate; culms branching only at the base, 0.5-3.5 dm tall; internodes glabrous or sparsely pubescent *D. strigosum var. leucoblepharis*
- 8 Basal leaves rosette-forming, usually much smaller than culm leaves; blade margins glabrous, or ciliate only below the middle (or papillose-ciliate throughout in =*lancearium*, which has densely puberulent internodes); culms branching at the nodes in age, 1.5-7.5 mm tall.

- 9 Blades of mid-culm leaves typically long and stiff, acuminate, linear or narrowly lanceolate, usually > 10× as long as wide, only 2-5 mm wide when < 8 cm long.
- 10 Spikelets 2.9-4.0 mm long, fusiform to elliptic, acute, basally constricted; first glume 1.4-2.6 mm long *D. species 8 (=fusiforme)*
- 10 Spikelets 1.5-3.1 mm long, obovate to elliptic-obovate, obtuse to sub-acute, not constricted basally; first glume 0.6-1.5 mm long.
- 11 Spikelets 1.5-2.2 mm long; first glume 0.6-0.8 mm long; blades to 8 cm long, usually involute *D. aciculare*
- 11 Spikelets 2.1-3.1 mm long; first glume 0.8-1.5 mm long; blades to 12 cm long, usually flat except at tip *D. angustifolium*
- 9 Blades of mid-culm leaves lanceolate, thin or firm but not stiff, usually < 10× as long as wide, usually 7 mm or more wide when as much as 8 cm long.
- 12 Spikelets 2.9-3.8 mm long, broadly elliptic, rounded at the summit, with broad and thick nerves *D. oligoanthes* var. *scribnerianum*
- 12 Spikelets 2.1-2.9 mm long, elliptic or obovate, rounded or pointed at the summit, the nerves often raised, but not broad and thick.
- 13 Culm internodes and sheaths glabrous or sparsely pilose.
- 14 Spikelets obpyriform when viewed dorsally, strongly plano-convex when viewed laterally; first glume and base of second glume usually strongly reddish-purple *D. species 2 (=webberianum)*
- 14 Spikelets variously shaped but not obpyriform when viewed dorsally, biconvex to elliptic when viewed laterally; first and second glumes various.
- 15 Culms tending to be stiffly erect; blades erect or erect-spreading, broad, usually but not always tapering from just below the middle to both ends, often yellowish green; plants not or only sparingly branched in age, not developing leafy fascicles of reduced leaves and inflorescences *D. boreale*
- 15 Culms not stiffly erect; leaves usually spreading, broad or narrow, dark to bright green; plants often freely branched in age, becoming top-heavy with a mass of fascicled, reduced leaves and inflorescences *D. dichotomum* group
- 13 Culm internodes crisp-puberulent (sparsely so in *D. species 2 (=webberianum)*); sheaths puberulent or glabrous.
- 16 Spikelets elliptic, sub-acute to pointed, greenish or faintly purple-tinged basally *D. commutatum* var. *ashei*
- 16 Spikelets strongly plano-convex when viewed laterally, obpyriform when viewed dorsally, broadly rounded, usually markedly reddish-purple basally.
- 17 Fertile lemma and palea papillose; spikelets 2.2-2.6 mm long; lower culm blades 6-12 mm wide, glabrous *D. species 2 (=webberianum)*
- 17 Fertile lemma and palea smooth (minutely reticulate but not papillose); spikelets (1.8) 1.9-2.2 (-2.3) mm long; lower culm blades 4-8 mm wide, glabrous, glabrate, or puberulent (especially abaxially) *D. species 3 (=lancearium)*

Key F - Spikelets 0.8-2.0 mm long, lower culm internodes variously hairy

- 1 Longer hairs of ligule 2-5 mm long.
- 2 Ligule without a distinct ring of short hairs in front of the long hairs *D. acuminatum* group
- 2 Ligule with a distinct ring of short hairs in front of the long hairs.
- 3 Peduncle, panicle axis, and sheaths puberulent with hairs 0.1 mm long; larger blades 3-6 cm long, 3-5 mm wide; spikelets 1.3-1.7 mm long *D. meridionale*
- 3 Peduncle panicle axis hairs > 0.1 mm long; sheaths and internodes densely clothed with straight retrorse (occasionally spreading to spreading-ascending) hairs often > 4 mm long *D. villosissimum* var. *villosissimum*
- 1 Longer hairs of ligule < 2 mm long.
- 4 Culm leaves basally crowded, ascending, usually matted or cushion-forming, larger than the mid and upper culm blades.
- 5 Sheaths conspicuously retrorsely long-pilose; longer blades 6-18 cm long and 7-12 mm wide; spikelets 1.9-2.3 mm long *D. laxiflorum*
- 5 Sheaths variously pubescent or glabrous, but not conspicuously retrorsely long-pilose; longer blades 2-6 cm long and 1-8 mm wide; spikelets 0.9-2.1 mm long.
- 6 Blades 1-4 mm wide, glabrous, the margins eciliate or basally ciliate; spikelets 0.9-1.5 mm long, glabrous; autumnal form branched from lower and mid nodes as well as from basal nodes.
- 7 Blades 1.5-4 (-5) cm long; spikelets 0.9-1.2 mm long *D. chamaelonche*
- 7 Blades 4-12 (-20) cm long, some at least 7 cm long; spikelets 1.2-1.5 mm long [*D. dichotomum* var. *glabrifolium*]
- 6 Blades 2-10 mm wide, pubescent or glabrous, the margins coarsely papillose-ciliate throughout; spikelets 1.1-2.1 mm long, glabrous or pubescent; autumnal form branched from basal nodes only.
- 8 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous *D. strigosum* var. *leucoblepharis*
- 8 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
- 9 Blades pilose; spikelets 1.1-1.6 mm long *D. strigosum* var. *strigosum*
- 9 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long *D. strigosum* var. *glabrescens*
- 4 Culm leaves not basally crowded, the lowest leaves spreading and rosette-forming, usually smaller than the culm leaves.
- 10 Blades of mid-culm leaves typically long and stiff, acuminate, linear or narrowly lanceolate, often involute, only 2-5 mm wide when < 8 cm long *D. aciculare*
- 10 Blades of mid-culm leaves lanceolate, thin or firm but not stiff, usually > 5 mm when > 8 cm long.
- 11 Internodes crisp-puberulent.
- 12 Ligule 0.7-1.5 mm long; first glume acute; spikelets elliptic when viewed dorsally, biconvex or elliptic when viewed laterally, not strongly nerved *D. columbianum*
- 12 Ligule < 0.5 mm long; first glume obtuse to truncate; spikelets obovate when viewed dorsally, plano-convex when viewed laterally, strongly nerved.
- 13 Spikelets 1.5-1.8 mm long; first glume 0.5-0.8 mm long; lower culm blades 2-5 mm wide *D. portoricense*
- 13 Spikelets (1.8-) 1.9-2.2 (-2.3) mm long; first glume 0.8-1.2 mm long; lower culm blades 4-8 mm wide *D. species 3 (=lancearium)*
- 11 Internodes variously hairy but not crisp-puberulent.

- 14 Internodes (sparsely-) moderately to densely pubescent to pilose; ligule 1-5 mm long; blade margins either weakly ciliate, papillose-ciliate basally only, or eciliate, lacking a white-beige cartilaginous edge 0.2 mm wide.
- 15 Larger mid-culm blades 4-7 cm long, 4-7 mm wide, glabrous to sparsely pubescent adaxially; ligule 1-5 mm long; spikelets 1.1-1.5 mm long..... *D. leucothrix*
- 15 Larger mid-culm blades 3-6 cm long, 3-5 mm wide, long-pilose adaxially; ligule often with a ring of hairs < 1 mm and scattered longer hairs to 4 mm; spikelets 1.3-1.7 mm long *D. meridionale*
- 14 Internodes sparsely pilose; ligule < 1 mm long; blade margins **either** coarsely papillose-ciliate throughout **or** glabrous with a white-beige cartilaginous edge about 0.2 mm wide.
- 16 Blades with white-beige cartilaginous margins 0.2 mm wide; spikelets 1.4-1.7 mm long; autumnal form branching from middle and upper nodes *D. tenue*
- 16 Blade margins coarsely papillose-ciliate throughout; spikelets 1.1-2.1 mm long; autumnal form branching from the base.
- 17 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous *D. strigosum* var. *leucoblepharis*
- 17 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
- 18 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long *D. strigosum* var. *glabrescens*
- 18 Blades pilose; spikelets 1.1-1.6 mm long..... *D. strigosum* var. *strigosum*

Key G - Spikelets 0.8-2.0 mm long, lower culm internodes glabrous

- 1 Ligule 1-5 mm long.
- 2 Ligule 1-2 mm long; sheaths sparsely to moderately spreading short-pilose; internodes glabrous; nodes retrorsely bearded; leaves 1-4 cm long, 2-5 mm wide; spikelets 1.2-1.4 mm long..... *D. species 10 (=curtifolium)*
- 2 Ligule (1.5-) 2-5 mm long; sheaths glabrous to variously pubescent; internodes glabrous or pubescent; nodes glabrous, or bearded with ascending, spreading, or tangled hairs; leaves 3-10 cm long, 3-10 mm wide; spikelets 0.8-1.9 mm long *D. acuminatum* group
- 1 Ligule < 1 mm long.
- 3 Basal leaves rosette-forming, usually much smaller than the culm leaves, not matted or cushion-forming; culms branching at the mid and upper nodes in age.
- 4 Blades of mid-culm leaves typically long and acuminate, linear or narrowly lanceolate, usually 10-20× as long as wide, only 2-5 mm wide when < 8 cm long.
- 5 Spikelets papillose-pubescent; blades 1-2 (-3) mm wide; panicle 2-3 cm wide; first glume 0.8-1.0 mm long, acute; culms to 4 dm tall *D. species 5 (=neuranthum)*
- 5 Spikelets glabrous; blades 3-8 mm wide; first glume 0.3-1.1 mm long, truncate to acute; culms to 10 dm tall.
- 6 Leaves 3-8 mm wide; panicle (8-) 20-40 mm wide; first glume 0.6-1.1 mm long, blunt to acute *D. dichotomum* group
- 6 Leaves 3-5.5 mm wide; panicle 2-5 mm wide; first glume 0.3-0.4 mm long, truncate to obtuse *D. hirstii*
- 4 Blades of mid-culm leaves lanceolate, mostly 10× or less as long as wide, usually 7 mm or more wide when as much as 8 cm long.
- 7 Spikelets elliptic, oblong, or obovate; lower culm blades 3-12 (-15) mm wide, thin, tapered to the base; plants often freely branching in age, becoming top-heavy with a mass of fascicled, reduced leafy branches and inflorescences *D. dichotomum* group
- 7 Spikelets broadly elliptic to suborbicular; lower culm blades 6-30 mm wide, thickish, broad, and cordate to subcordate at the base; plants sparingly branched in age, not becoming top-heavy with fascicled, reduced leafy branches and inflorescences.
- 8 Spikelets 0.9-1.2 mm long; longer blades 6-8 cm long, erect to erect-ascending *D. erectifolium*
- 8 Spikelets 1.2-1.9 mm long; longer blades 8-20 cm long, ascending or the uppermost erect.
- 9 Mid-culm blades 6-11 (-14) mm wide, the uppermost 3-9 cm long *D. sphaerocarpon* var. *sphaerocarpon*
- 9 Mid-culm blades, at least some, 15-30 mm wide, the uppermost 10-15 cm or more long *D. polyanthes*
- 3 Basal leaves similar to or larger than the mid and upper culm leaves, often matted or cushion-forming; culms branching at the base (also at mid and upper nodes in *D. chamaelonche* vars. and *D. dichotomum* var. *glabrifolium*).
- 10 Longer blades > 6 cm; if only 6 cm, then sheaths retrorsely long-pilose (*D. laxiflorum*).
- 11 Spikelets 1.2-1.5 mm long, glabrous [*D. dichotomum* var. *glabrifolium*]
- 11 Spikelets 1.7-2.3 (-2.8) mm long, pubescent.
- 12 Longer blades 6-18 cm long by 7-12 mm wide; sheaths conspicuously retrorsely long-pilose; nodes bearded with retrorse or spreading hairs; spikelets 1.9-2.3 mm long *D. laxiflorum*
- 12 Longer blades 10-35 cm long by 2-4 mm wide; sheaths glabrous to variously pilose, but not conspicuously retrorsely long-pilose; nodes variously pubescent to glabrate; spikelets 1.7-2.3 (-2.8) mm long *D. linearifolium*
- 10 Longer blades 1.5-6 cm; sheaths glabrous or pubescent, but not retrorsely long-pilose.
- 13 Blades 1-3 mm wide, glabrous, eciliate or basally ciliate; spikelets 0.9-1.4 mm long.
- 14 Spikelets pubescent, 1.2-1.4 mm long; blades involute, often falcate, 2.5-6 cm long [*D. chamaelonche* ssp. *breve*]
- 14 Spikelets glabrous, 0.9-1.2 mm long; blades flat, not falcate, 1.5-4 (-5) cm long *D. chamaelonche* ssp. *chamaelonche*
- 13 Blades 3-8 mm wide; spikelets 1.1-2.1 mm long (if < 1.5 mm, then blades either pubescent on one or both surfaces or ciliate to the apex).
- 15 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous *D. strigosum* var. *leucoblepharis*
- 15 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
- 16 Blades pilose; spikelets 1.1-1.6 mm long *D. strigosum* var. *strigosum*
- 16 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long *D. strigosum* var. *glabrescens*

Key to the *Dichanthelium acuminatum* group

- 1 Internodes glabrous.
- 2 Ligule 1-2 mm long; sheaths sparsely to moderately spreading short-pilose; nodes retrorsely bearded; leaves 1-4 cm long, 2-5 mm wide; spikelets 1.2-1.4 mm long..... *D. species 10 (=curtifolium)*
- 2 Ligule (1.5-) 2-5 mm long; sheaths glabrous to variously pubescent, but not spreading short-pilose; nodes glabrous or pubescent, but not bearded; leaves 4-11 cm long, 4-8 mm wide.
- 3 Panicles 8-12 cm long, ¼-½ as wide, bearing 250 or more spikelets; spikelets 1.4-1.6 mm long; ligule (1.5-) 2-3 mm long; larger blades 7-11 cm long, often tinged with purple..... *D. spretum*

- 3 Panicles 3-8 cm long, > ½ as wide, bearing < 200 spikelets; spikelets 1.1-1.6 mm long; ligule 2-5 mm long; larger blades 4-10 cm long.
- 4 Longer hairs of ligule 2-3 mm long; spikelets 1.1-1.5 mm long; blades often tinged with purple, the larger 4-8 cm long
..... *D. longiligulatum*
- 4 Longer hairs of ligule 3-5 mm long; spikelets 1.4-1.6 mm long; blades often yellowish-green, the larger 5-10 cm long
..... *D. acuminatum* var. *lindheimeri*
- 1 Internodes variously pubescent.
- 5 Peduncle, panicle axis, and/or sheaths of vernal culms puberulent with hairs 0.1 mm long, sometimes also pubescent with longer hairs, but never grayish-villous; larger blades 2-7 cm long, 2-7 mm wide.
- 6 Spikelets 0.8-1.1 mm long; blades 2-4.5 cm long, 2-5 mm wide; sheaths sparsely puberulent, lacking papillose-based longer hairs
..... *D. wrightianum*
- 6 Spikelets 1.1-1.7 mm long; mid-culm blades generally 3-7 cm long and 3-7 mm wide; sheaths with some papillose-based hairs 2 mm or more long.
- 7 Larger mid-culm blades 4-7 cm long, 4-7 mm wide, glabrous to sparsely pubescent adaxially; ligule 1-5 mm long; spikelets 1.1-1.5 mm long
..... *D. leucothrix*
- 7 Larger mid-culm blades 3-6 cm long, 3-5 mm wide, long-pilose adaxially; ligule often with a ring of hairs < 1 mm and scattered longer hairs to 4 mm; spikelets 1.3-1.7 mm long
..... *D. meridionale*
- 5 Peduncle, panicle axis, and sheaths of vernal culms glabrous, or pilose, or grayish-villous with some shorter hairs 0.2-0.5 mm long, but not puberulent with hairs 0.1 mm long; larger blades 4-12 cm long, 4-12 mm wide.
- 8 Sheaths and internodes of vernal culms gray-villous with a dense, tangled, or matted mixture of slender hairs 2-4 mm long, variously ascending, spreading, and retrorse, papillose or non-papillose, often with shorter hairs beneath; blades velvety-pubescent on abaxial surface.
- 9 Culms 15-60 cm tall and < 1.5 mm thick; panicle broadly ovoid, 5-8 cm long and > 1/2 as wide*D. acuminatum* var. *acuminatum*
- 9 Culms 40-70 (-80) cm tall, the larger usually > 60 cm long and > 2 mm thick; panicle contracted, 8-11 cm long and < ½ as wide
..... *D. acuminatum* var. *thurowii*
- 8 Sheaths and internodes of vernal culms nearly glabrous, pubescent, or papillose-pilose to hispid with ascending straight hairs 1-3 mm long; blades appressed-pilose to puberulent abaxially, but not velvety.
- 10 Peduncle, panicle axis, and often middle and upper internodes glabrous; sheaths, at least near mid-length, lacking hairs or papillae; larger blades 4-8 mm wide, glabrous abaxially; spikelets 1.3-1.6 mm long
..... *D. acuminatum* var. *lindheimeri*
- 10 Peduncle, panicle axis, and internodes pubescent to pilose; sheaths papillose-pilose to hispid, the hairs tending to break off but leaving evident papillae; larger blades 6-10 mm wide, short-pilose to glabrate abaxially; spikelets 1.5-2.0 mm long
..... *D. acuminatum* var. *fasciculatum*

Key to the *Dichanthelium dichotomum* Group

- 1 Lower cauline nodes glabrous or puberulent, but not bearded.
- 2 Spikelets glabrous.
- 3 Cauline leaves mostly basally disposed, strongly ascending, much larger than the 2-3 remote middle and upper cauline leaves of fertile culms; spikelets 2.4-2.9 mm long; culms branch from basal and lower nodes, but are not known to produce autumnal inflorescences
..... [*D. nudicaule*]
- 3 Cauline leaves well-distributed along the culm, > 3, gradually reduced upwards and often spreading; spikelets 0.9-2.6 mm long; culms produce autumnal inflorescences from lower, middle, and/or upper nodes, if from lower only, then spikelets only 0.9-1.2 mm long.
- 4 Fertile lemma and palea densely papillose; culms weak, soon sprawling over other vegetation
..... *D. lucidum*
- 4 Fertile lemma and palea smooth, with few or no papillae; culms stiffer, erect to ascending.
- 5 Spikelets 0.9-1.5 mm long; vernal blades 1-4 mm wide.
- 6 Spikelets 0.9-1.2 mm long; blades 1.5-4 (-5) cm long, 1-2.5 (-3) mm wide, mostly 15-20 times as long as wide; autumnal plants cushion-forming
..... *D. chamaelonche* ssp. *chamaelonche*
- 6 Spikelets 1.2-1.5 mm long; blades 1-12 (-20) cm long; autumnal plants not cushion-forming.
- 7 Blades 1-3 (-5) cm long, 1.5-3 (-4) mm wide, about 10 times as long as wide; autumnal plants sparsely tufted
..... *D. ensifolium*
- 7 Blades 4-12 (-20) cm long (the longer at least 7 cm), 2-4 mm wide, 20-30 (-50) times as long as wide
..... [*D. dichotomum* var. *glabrifolium*]
- 5 Spikelets 1.4-2.6 mm long; vernal blades 3-15 mm wide (if spikelets < 1.6 mm long and vernal blades < 5 mm wide, then larger blades > 5 cm long in *D. caerulescens*).
- 8 Widest vernal cauline blades 7-15 mm wide; upper sheaths often glutinous-warty; spikelets 2.1-2.6 mm long, some or most acute to beaked, second glume and sterile lemma extending 0.3-0.5 mm beyond fertile lemma in at least some spikelets
..... *D. yadkinense*
- 8 Widest vernal cauline blades 3-10 mm wide; upper sheaths not glutinous-warty; spikelets 1.4-2.3 mm long, blunt to subacute, second glume and sterile lemma often equal to or shorter than fertile lemma, or extending < 0.3 mm beyond it.
- 9 Spikelets 1.4-1.8 mm long; first glume 0.3-0.8 mm long; fertile lemma 1.3-1.5 mm long; mature vernal panicles usually short-exserted with ascending branches; fresh foliage bluish-glaucous
..... *D. caerulescens*
- 9 Spikelets 1.7-2.3 mm long; first glume 0.6-1.1 mm long; fertile lemma 1.6-1.9 mm long; mature vernal panicles exerted with spreading branches; fresh foliage not bluish-glaucous.
- 10 Vernal cauline blades spreading to deflexed, flexuous; [of wet-mesic to dry woods and thickets]
..... *D. dichotomum* var. *dichotomum*
- 10 Vernal cauline blades stiffly erect; [of wet pine savannas and open swamps]
..... *D. dichotomum* var. *roanokense*
- 2 Spikelets pubescent.
- 11 Spikelets 1.2-1.7 mm long; fertile lemma and palea smooth; culms erect.
- 12 Blades involute and often falcate, 3-6 cm long, about 1.5 mm wide when flattened, 20-50× as long as wide; lower internodes often strigose; spikelets 1.2-1.4 mm long; culms 5-20 cm long
..... [*D. chamaelonche* ssp. *breve*]
- 12 Blades neither involute (except apically) nor falcate, 1-7 cm long, 1.5-7 mm wide, about 10× as long as wide; lower internodes glabrous or sparsely pilose, but not strigose; spikelets 1.1-1.7 mm long; culms 15-60 cm long.

- 13 Blades 1-3 (-5) cm long, 1.5-3 (-4) mm wide, the cartilaginous margins typically gray-green to white-beige and about 0.1 mm wide; spikelets 1.2-1.5 mm long; culms to 40 cm long *D. ensifolium*
- 13 Blades 2-7 mm long, 3-6 mm wide, the cartilaginous margins typically white-beige and about 0.2 mm wide; spikelets (1.2-) 1.4-1.7 mm long; culms to 60 cm long..... *D. tenuis*
- 11 Spikelets (1.5-) 1.7-2.7 mm long, if shorter than 1.8 mm then fertile lemma and palea densely papillose; culms soon sprawling.
- 14 Spikelets (1.5-) 1.7-2.3 mm long, glabrous (rarely pubescent); first glume 0.7-1.1 mm long; fertile lemma and palea densely papillose at 20×..... *D. lucidum*
- 14 Spikelets 2.2-2.7 mm long, pubescent; first glume 1.0-1.4 mm long; fertile lemma and palea smooth or with a few weak papillae at 20×..... *D. sphagnicola*
- 1 Lower cauline nodes bearded, the hairs usually retrorse.
- 13 Spikelets glabrous.
- 14 Spikelets 0.9-1.4 mm long; vernal cauline blades 1.5-4 (-5) cm long and 1-5 mm wide; internodes or sheaths glabrous or pubescent.
- 15 Spikelets 1.2-1.4 mm long; sheaths spreading-pilose; vernal cauline blades 2-5 mm wide; ligule 1-2 mm long; node beard hairs usually spreading or reflexed; internodes glabrous..... *D. sp. 10 (=curtifolium)*
- 15 Spikelets 0.9-1.2 mm long; sheaths glabrous; vernal cauline blades 1-2 (-3) mm wide; ligule < 1 mm long; node beard hairs erect and often only partially encircling the node; internodes glabrous or puberulent *D. chamaelonche*
- 14 Spikelets 1.4-2.3 mm long; vernal cauline blades 5-12 cm long and 3-15 mm wide; internodes and sheaths glabrous.
- 16 Spikelets 1.8-2.3 mm long; first glume 0.6-1.1 mm long; fertile lemma 0.8-1.0 mm wide; widest vernal blades 3-8 (-10) mm wide *D. dichotomum* var. *dichotomum*
- 16 Spikelets 1.4-1.9 mm long; first glume 0.3-0.6 (-0.7) mm long; fertile lemma 0.6-0.8 mm wide; widest vernal blades 7-15 mm wide.. *D. dichotomum* var. *ramulosum*
- 13 Spikelets pubescent.
- 17 Spikelets 1.2-1.4 mm long; sheaths spreading-pilose; vernal cauline blades 1-4 cm long and 2-5 mm wide; ligule 1-2 mm long *D. sp. 10 (=curtifolium)*
- 17 Spikelets 1.4-2.8 mm long; sheaths glabrous to appressed-pilose; vernal cauline blades 5-12 cm long and 5-15 mm wide; ligule < 1 mm long.
- 18 Usually all culm nodes bearded; internodes glabrous, or middle and upper internodes and peduncle sparsely to moderately spreading short-hairy, sometimes also glandular; upper as well as lower vernal sheaths and both surfaces of cauline blades pubescent, often densely so; spikelets (1.5-) 1.8-2.1 mm long; [of dry rocky or sandy basic soil and barrens]..... *D. annulum*
- 18 Often only lower culm nodes bearded; internodes glabrous; at least middle and upper cauline blades glabrous; spikelets 1.4-2.8 mm long; [mostly of wet acid soils and mesic to dry woodlands].
- 19 Spikelets (2.0-) 2.2-2.8 mm long; first glume 0.5-1.3 mm long; fertile lemma 1.8-2.3 mm long; lowest vernal cauline blades pubescent at least abaxially..... *D. mattamuskeetense*
- 19 Spikelets 1.4-2.2 mm long; first glume 0.3-0.9 mm long; fertile lemma 1.4-1.7 mm long; lowest vernal cauline blades glabrous.
- 20 Spikelets 1.7-2.2 mm long; first glume 0.6-0.9 mm long; fertile lemma 0.7-1.0 mm wide..... *D. dichotomum* var. *nitidum*
- 20 Spikelets 1.4-1.9 mm long; first glume 0.3-0.6 (-0.8) mm long; fertile lemma 0.6-0.8 mm wide..... *D. dichotomum* var. *ramulosum*

Dichantheium aciculare (Desvaux ex Poiret) Gould & Clark, Needle Witch Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA): sandy woods and fields; common in Coastal Plain (uncommon in Piedmont, rare in VA Piedmont). May-October. NJ south to n. FL, west to TX and OK, also in West Indies and n. South America. Blades typically are strongly involute. Can be confused with autumnal forms of *D. ovale* var. *addisonii*, which has vernal blades 5-10 mm wide. See note at end of descriptions regarding *Panicum chrysopsidifolium*. [= *Panicum aciculare* Desvaux ex Poiret – RAB, F, G; < *P. aciculare* – C; = *D. aciculare* ssp. *aciculare* – FNA; > *P. aciculare* – HC, S; > *P. bennettense* M.V. Brown – HC, S; < *D. aciculare* – K, Z]

Dichantheium acuminatum (Swartz) Gould & Clark. var. ***acuminatum***, Woolly Witch Grass. Cp, Pd (GA, NC, SC, VA): on dryish sandy or clayey soils of open woods and disturbed areas; common. May-October. MA south to FL, west to TX, also in West Indies, Mexico, Central America, and n. South America. Internodes and sheaths gray-villous with usually non-papillate hairs. Plants tend to be low and "bushy" with several spreading-ascending culms and dense autumnal branching. See note at end of descriptions regarding *Panicum chrysopsidifolium*. [= Y; < *Panicum lanuginosum* Elliott – RAB; > *P. lanuginosum* var. *lanuginosum* – C, F, G; < *P. leucothrix* Nash – C; > *P. auburne* Ashe – F, G, HC, S, WV; < *D. acuminatum* ssp. *acuminatum* – FNA; > *P. lanuginosum* – HC, S, WV; >> *D. acuminatum* var. *acuminatum* – K, Z; >> *D. acuminatum* var. *implicatum* (Scribner) Gould & Clark – K, Z; < *P. acuminatum* Swartz var. *acuminatum* – X]

Dichantheium acuminatum (Swartz) Gould & Clark var. ***fasciculatum*** (Torrey) Freckmann, Slender-stemmed Witch Grass. Mt, Pd, Cp (GA, NC, SC, VA): open or cut-over woods, thickets, fields, meadows, and shores, frequently on disturbed soils; common (uncommon in Coastal Plain). May-August. Newfoundland south to FL, west to CA, north to s. British Columbia. Typically much less pilose than var. *acuminatum*, the hairs usually papillate. See note at end of descriptions regarding *Panicum glutinoscabrum*. [= Y; < *Panicum lanuginosum* Elliott – RAB; > *P. lanuginosum* var. *fasciculatum* (Torrey) Fernald – C, F, G; > *P. lanuginosum* var. *tennesseense* (Ashe) Gleason – C, G; > *P. lanuginosum* var. *implicatum* (Scribner) Fernald – C, F, G; = *D. acuminatum* ssp. *fasciculatum* (Torrey) Freckmann & Lelong – FNA; > *P. implicatum* Scribner – HC, WV; > *P. huachucae* Ashe var. *huachucae* – HC, S; > *P. huachucae* var. *fasciculatum* (Torrey) Hubb. – HC; > *P. tennesseense* Ashe – HC, S; > *P. huachucae* var. *silvicola* Hitchcock & Chase – S; >> *D. acuminatum* var. *acuminatum* – K, Z; >> *D. acuminatum* var. *implicatum* (Scribner) Gould & Clark – K, Z; > *P. huachucae* Ashe – WV; > *P. acuminatum* Swartz var. *fasciculatum* (Torrey) Lelong – X; > *P. acuminatum* var. *unciphyllum* (Trinius) Lelong – X]

Dichantheium acuminatum (Swartz) Gould & Clark var. ***lindheimeri*** (Nash) Gould & Clark, Lindheimer's Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): open or cut-over woods, thickets, fields, meadows, and shores, often on wet soils; uncommon (rare in Coastal Plain and Mountains). May-September. Nova Scotia west to Manitoba, south to FL and MO, west to s. CA. Internodes as well as sheaths often nearly glabrous. Panicle axis sometimes sparsely pilose at branch nodes, but otherwise glabrous. [= Y; < *Panicum lanuginosum* Elliott – RAB; >> *P. lanuginosum* var. *lindheimeri* (Nash) Fernald – C, G; > *P. lanuginosum* var. *septentrionale* Fernald – C, F, G; > *P. lanuginosum* var. *lindheimeri* – F; = *D. acuminatum* ssp. *lindheimeri*

(Nash) Freckmann & Lelong – FNA; < *P. spretum* Schultes – GW; > *P. lindheimeri* Nash – HC, S, WV; < *D. acuminatum* var. *acuminatum* – K, Z; > *D. acuminatum* var. *lindheimeri* – K, Z; > *P. acuminatum* Swartz var. *lindheimeri* (Nash) Lelong – X; ? *D. lanuginosum* (Elliott) Gould var. *lindheimeri* (Nash) Harvill]

Dichantheium acuminatum (Swartz) Gould & Clark var. ***thurowii*** (Scribner & J.G. Smith) Gould & Clark, Thurov's Witch Grass. Cp (GA): in dry open woods, woodland edges, dry prairies, brushy pastures; rare. May?-October? Occasional from GA to AR and e. TX. [= K, Y, Z; < *D. acuminatum* (Swartz) Gould & Clark. ssp. *acuminatum* – FNA; = *Panicum thurowii* Scribner & J.G. Smith – HC, S]

Dichantheium angustifolium (Elliott) Gould, Narrow-leaved Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): sandy pinelands and fields; common (rare in Mountains, rare in VA). May-October. NJ south to FL, west to AR and e. TX. Vernal blades typically are flat (often involute distally). Can be confused with *D. consanguineum*, which has spreading-pilose nodes and blades 10-15× as long as wide; *D. angustifolium* blades typically are 20× or more as long as wide. Plants with involute blades to 8 cm long, spikelets 2.1-2.5 mm long, and first glumes 0.7-1.1 mm long are referable to *Panicum arenicoloides*, here included in *D. angustifolium*. They are transitional to *D. aciculare*. [= *Panicum angustifolium* Elliott – RAB, F, G; < *P. aciculare* Desvaux ex Poiret – C; = *D. aciculare* ssp. *angustifolium* (Elliott) Freckmann & Lelong – FNA; > *P. angustifolium* – HC, S; > *P. arenicoloides* Ashe – HC, S; < *D. aciculare* – K, Z]

Dichantheium annulum (Ashe) LeBlond, Ringed Witch Grass. Pd (GA, NC, VA), Mt (VA): dry sandy or rocky soil of open woods, dry grasslands, and barrens, and glades over serpentine, limestone, calcareous shales, and other high pH dry soils; rare. May-October. NJ, IN, and MO south to AL and MS, primarily in the Appalachian Province with very few occurrences in the Coastal Plain. One of the more distinctive taxa within the *D. dichotomum* group by morphology, habitat, and range. Plants from se. MA with all leaves pubescent, glabrous internodes, and spikelets 2.2-2.5 mm long were described as *Panicum annulum* var. *glabrescens*, but belong to *D. mattamuskeetense*. [= Q; < *P. dichotomum* Linnaeus – RAB, C, GW; = *Panicum annulum* Ashe – F, HC, S; = *P. annulum* var. *annulum* – G; < *D. dichotomum* ssp. *mattamuskeetense* (Ashe) Freckmann & Lelong – FNA; < *D. dichotomum* (Linnaeus) Gould – K, Z; < *P. dichotomum* var. *mattamuskeetense* (Ashe) Lelong – X]

Dichantheium boreale (Nash) Freckmann, Northern Witch Grass. Pd, Mt (GA, NC, VA): open woods and grassy slopes, usually in moist soil; rare. April-September. Newfoundland and Ontario south to NC, GA, and AR. Our plants are =*Panicum bicknellii*, regarded as a "putative hybrid" (along with =*P. calliphylum*) by FNA, which cites WV as the southern limit of *D. boreale*. [= K, Z; > *Panicum bicknellii* Nash – RAB, F, HC, S; > *P. boreale* Nash – C, F, G, HC; > *P. calliphylum* Ashe – F, HC; > *D. boreale* – FNA; > *P. bicknellii* var. *bicknellii* – G; > *P. bicknellii* var. *calliphylum* (Ashe) Gleason – G]

Dichantheium boscii (Poiret) Gould & Clark, Bose's Witch Grass. Pd, Mt, Cp (GA, NC, SC, VA): shaded mesic to dry woodlands; common. April-September. MA and IL south to n. FL and e. TX. [= FNA, K, Z; = *Panicum boscii* Poiret – RAB, C, G; > *P. boscii* var. *bosicii* – F, HC, S, WV; > *P. boscii* var. *molle* (Vasey) Hitchcock & Chase – F, HC, S, WV]

Dichantheium caeruleascens (Hackel ex Hitchcock) Correll, Blue Witch Grass. Cp (NC, VA): marshes, swamps, wet pinelands, maritime grasslands, damp sandy soil; rare. June-October. NJ to NC, and from FL to LA, also in the Bahamas and West Indies. Not treated by FNA, where it presumably would have been placed in synonymy with *D. dichotomum* ssp. *roanokense*. [= Q; < *Panicum dichotomum* Linnaeus – RAB, GW; = *P. caeruleascens* Hackel ex Hitchcock – F, HC, S; < *D. dichotomum* ssp. *roanokense* – FNA; < *P. roanokense* Ashe – G; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *roanokense* (Ashe) Lelong – X]

Dichantheium chamaelonche (Trinius) Freckmann & Lelong ssp. ***chamaelonche***, Carpet Witch Grass. Cp (GA, NC, SC, VA): moist pine savannas and flatwoods, pineland pondshores; uncommon (rare in VA). April-September. Se. VA south to FL, west to LA, also in Cuba and Belize. Internodes can be glabrous or puberulent, and nodes glabrous, pubescent, or bearded, but the glabrous spikelets 0.9-1.2 mm long are diagnostic. The concept of this taxon in FNA (as ssp. *chamaelonche*) appears to include *D. dichotomum* var. *glabrifolium* (see descriptions of Floridian *D. chamaelonche* ssp. *breve* and *D. dichotomum* var. *glabrifolium* at end of this treatment). [= *Panicum chamaelonche* Trinius – RAB, G, GW, HC, S; < *P. ensifolium* Baldwin – C; < *D. chamaelonche* ssp. *chamaelonche* – FNA; < *D. dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin) Gould & Clark – K, Z; = *P. chamaelonche* var. *chamaelonche* – X]

Dichantheium clandestinum (Linnaeus) Gould, Deer-tongue Witch Grass. Mt, Pd, Cp (GA, NC, SC, VA): shaded to filtered woodlands, ditches and low areas, and often in moist sandy soil; common (uncommon in Coastal Plain south of VA). May-October. Nova Scotia and Québec south to n. FL, west to IA, KA, and TX. [= FNA, K, Z; = *Panicum clandestinum* Linnaeus – RAB, C, F, G, HC, S, WV, X]

Dichantheium columbianum (Scribner) Freckmann, American Witch Grass. Pd, Cp (GA, NC, SC, VA), Mt (NC, VA): dry to moist thin woods and open ground, usually in sandy soil; uncommon (rare in VA). June-October. S. ME, s. Ontario, and WI south to GA, TN, and IL. [= *Panicum columbianum* Scribner – RAB, C, G, WV; > *P. columbianum* var. *columbianum* – F, HC; > *P. columbianum* var. *oricola* (Hitchcock & Chase) Fernald – F; = *D. acuminatum* ssp. *columbianum* (Scribner) Freckmann & Lelong – FNA; > *P. columbianum* var. *thinium* Hitchcock & Chase – HC; > *P. oricola* Hitchcock & Chase – HC; > *P. tsugetorum* Nash – HC, S; < *D. sabulorum* (Lamarck) Gould & Clark var. *thinium* (Hitchcock & Chase) Gould & Clark – K, Z; > *P. columbianum* – S; < *P. acuminatum* Swartz var. *unciphylum* (Trinius) Lelong – X]

Dichantheium commutatum (Schultes) Gould var. ***ashei*** (Pearson ex Ashe) Mohlenbrock, Ashe's Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): dry rocky or sandy woods and openings; common. May-October. MA south to FL and MS, west to MI, MO, and OK. [< *Panicum commutatum* – RAB, C; = *P. commutatum* Schultes var. *ashei* (Pearson ex Ashe) Fernald – F, G; = *D. commutatum* ssp. *ashei* (Pearson ex Ashe) Freckman & Lelong – FNA; = *P. ashei* Pearson ex Ashe – HC, S, WV; < *D. commutatum* – K]

Dichantheium commutatum (Schultes) Gould var. ***commutatum***, Variable Witch Grass. Cp, Mt, Pd (GA, NC, SC, VA): low, shaded, moist woodlands and woodland edges, and dry, thin, often rocky woods and thickets; common. May-October. ME south to FL, west to MI, MO, OK, and TX, also in Mexico. Plants with spikelets 3.0-3.7 mm long, first glumes half or more as long, and with broadly linear leaves about 10 × as long as wide have been recognized as ssp. *equilaterale* by FNA, and *Panicum equilaterale* by HC and S, but intermediates occur throughout the NC to FL portion of the range of specimens bearing the

equilaterale name. [*Panicum commutatum* Schultes – RAB, C; > *P. commutatum* var. *commutatum* – F, G; > *P. commutatum* – HC, S, WV; > *P. mutabile* Scribner & Smith ex Nash – F, G, HC, S; > *D. commutatum* ssp. *commutatum* Freckmann & Lelong – FNA; > *D. commutatum* ssp. *equilaterale* (Scribner) Freckmann & Lelong – FNA; > *D. commutatum* ssp. *joorii* (Vasey) Freckmann & Lelong – FNA; < *D. commutatum* – K; > *P. joorii* Vasey – HC, S; > *P. equilaterale* Scribner – HC, S]

Dichanthelium consanguineum (Kunth) Gould & Clark, Kunth's Witch Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): moist or dry sandy soils of pinelands; common in the Coastal Plain, uncommon in the Piedmont (rare in VA). April-September. Occasional from se. VA south to FL, west to TX and IN. Often not easily separated from *D. angustifolium* and *D. ovale*. It is distinguished from *D. angustifolium* by spreading-hirsute nodes and leaves 10-15× as long as wide (*D. angustifolium* has beardless nodes, or nodes bearded with erect-ascending soft hairs, and longer leaves 20× or more as long as wide). *D. consanguineum* is distinguished from *D. ovale* by having strongly pilose upper blade surfaces (*D. ovale* upper blade surfaces are glabrous or with a few long hairs basally). The hairs of *D. consanguineum* frequently are strongly papillate. [= FNA, K, Z; = *Panicum consanguineum* Kunth – RAB, C, F, G, HC, S]

Dichanthelium depauperatum (Muhlenberg) Gould, Starved Witch Grass. Pd, Mt, Cp (GA, NC, SC, VA): dry soils of grasslands and open woods, often on disturbed soils of roadsides and ditches; common (rare in Coastal Plain south of VA). May-September. Newfoundland and MN south to GA and TX. [= FNA, K, Z; = *Panicum depauperatum* Muhlenberg – RAB, C, HC, S, WV; > *P. depauperatum* var. *depauperatum* – F, G; > *P. depauperatum* var. *psilophyllum* Fernald – F, G]

Dichanthelium dichotomum (Linnaeus) Gould var. *dichotomum*, Forked Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): wet-mesic to dry woods, thickets, and woodland openings; common (rare in VA Coastal Plain). May-October. S. Canada and MI south to FL and TX. Plants with bearded nodes and larger leaves are referable to *Panicum dichotomum* var. *barbulatum* (here included) but intermediates abound. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; > *P. dichotomum* var. *dichotomum* – F, WV; > *P. dichotomum* var. *barbulatum* (Michaux) Wood – F, WV; = *D. dichotomum* ssp. *dichotomum* – FNA; = *P. dichotomum* – G; > *P. dichotomum* – HC, S; > *P. barbulatum* Michaux – HC, S; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *dichotomum* – X]

Dichanthelium dichotomum (Linnaeus) Gould var. *nitidum* (Lamarck) LeBlond, Shining Witch Grass. Cp (GA, NC, SC, VA), Pd (NC), Mt (SC, VA): moist sandy or peaty soil of wet pine savannas and pocosin ecotones, wet meadows near the coast, swamps, and marshes; uncommon (rare in Piedmont and Mountains, rare in VA). PA and NJ south to FL, west to MO and TX; also the Bahamas (Sorrie & LeBlond 1997) and West Indies, and Mexico to Venezuela. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. nitidum* Lamarck – F, HC, S; = *D. dichotomum* ssp. *nitidum* (Lamarck) Freckmann & Lelong – FNA; = *P. nitidum* var. *nitidum* – G; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *nitidum* (Lamarck) Wood – X]

Dichanthelium dichotomum (Linnaeus) Gould var. *ramulosum* (Torrey) LeBlond, Branched Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): floodplain forests, swamps, openings, and borders of streams and ponds, and occasionally in dry upland woods; common. May-October. MA and MI south to FL and TX. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. microcarpon* Muhlenberg ex Elliott – F, HC, S, WV; = *D. dichotomum* ssp. *microcarpon* (Muhlenberg ex Elliott) Freckmann & Lelong – FNA; = *P. nitidum* Lamarck var. *ramulosum* Torrey – G; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *ramulosum* (Torrey) Lelong – X]

Dichanthelium dichotomum (Linnaeus) Gould var. *roanokense* (Ashe) LeBlond, Roanoke Witch Grass. Cp (GA, NC, SC, VA): wet pine savannas, swamp openings, and wet peaty meadows; uncommon (rare in VA). May-September. DE south to FL, west to e. TX; also in Jamaica. See note under *D. caerulescens* regarding FNA treatment. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. roanokense* Ashe – F, HC, S; < *D. dichotomum* ssp. *roanokense* (Ashe) Freckmann & Lelong – FNA; < *P. roanokense* – G; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *roanokense* (Ashe) Lelong – X]

Dichanthelium ensifolium (Baldwin ex Elliott) Gould, Small-leaved Witch Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA): wet to mesic peaty, sandy, or mucky soils, often in open pinelands or with sphagnum; common (rare in Piedmont). May-October. NJ south to FL, west to e. TX and AR. Plants with pubescent spikelets are frequent. [= *D. ensifolium* ssp. *ensifolium* – FNA; < *Panicum ensifolium* Baldwin ex Elliott – RAB, C, G, GW; = *P. ensifolium* – F; > *P. ensifolium* – HC, S; > *P. flavovirens* Nash – HC, S; > *P. vernale* Hitchcock & Chase – HC, S; < *D. dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin ex Elliott) Gould & Clark – K, Z; < *P. ensifolium* var. *ensifolium* – X]

Dichanthelium erectifolium (Nash) Gould & Clark, Erect-leaved Witch Grass. Cp (GA, NC, SC): limesink ponds, depression meadows, cypress savannas, pine savannas; rare. May-August. Se. NC to FL, west to LA; Cuba. [= FNA, K, Z; = *Panicum erectifolium* Nash – RAB, GW, HC, S]

Dichanthelium fusiforme (Hitchcock) Harvill, Spindle-fruited Witch Grass. Cp (GA, NC, SC, VA): dry to moist sand of open pine and pine/oak woods and clearings; rare. May-November. Se. VA south to FL, west to MS, also in West Indies, Mexico, Central America, and Venezuela; perhaps most abundant in FL. Autumnal blades often flat. The autumnal form of *D. oligosanthos* var. *oligosanthos* can be very similar to *D. fusiforme* if the vernal blades of the former are missing. They are best separated by ligule length (0.5-1 mm in *fusiforme*, 1.5-3 mm in *oligosanthos*) and the more attenuated ends of the *fusiforme* spikelet. [= *Panicum fusiforme* Hitchcock – RAB, F, G, HC, S; < *P. aciculare* Desvaux ex Poiret – C; = *D. aciculare* ssp. *fusiforme* (Hitchcock) Freckmann & Lelong – FNA; < *D. aciculare* – K, Z]

Dichanthelium hirstii (Swallen) Kartesz, Hirsts' Witch Grass. Cp (GA, NC): pond-cypress savannas and limesink depressions; rare. June-September. This distinctive species is known from only seven sites: two in NC, one in DE, two in NJ (one not seen since 1992), and two historical populations in GA. Described in 1961 (Swallen 1961), it is treated by some taxonomists as part of the *D. aciculare* group and by others as part of the *D. dichotomum* group; its affinities appear to lie with the former. See Schuyler (1996) for a discussion of the taxonomic distinctiveness of this species. The occurrence of this species in NC is documented in LeBlond & Sorrie (2001). [= K; < *Panicum aciculare* Desvaux ex Poiret – C; < *D. dichotomum* ssp. *roanokense* (Ashe) Freckmann & Lelong – FNA]

Dichanthelium latifolium (Linnaeus) Harvill, Broad-leaved Witch Grass. Mt (GA, NC, SC, VA), Pd (VA), Cp (VA): open or shady well-drained forests; common (rare south of VA). Late May-September. ME south to n. GA, west to WI and MS. [=

FNA; = *Panicum latifolium* Linnaeus – RAB, C, F, G, HC, S, WV; = *D. latifolium* (Linnaeus) Gould & Clark – K, Z, a later combination]

Dichantheium laxiflorum (Lamarck) Gould, Open-flower Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): open or shaded woodlands, often in moist soil; common. April-September. MD south to FL, west to TX, north to IN, also in Mexico, Central America, and West Indies. [= FNA, K, Z; = *Panicum laxiflorum* Lamarck – RAB, C, F, G; > *P. laxiflorum* – HC, S; > *P. xalapense* Humboldt, Bonpland, & Kunth var. *xalapense* – HC, S; > *P. xalapense* var. *strictirameum* Hitchcock & Chase – HC, S; > *P. xalapense* – WV]

Dichantheium leucothrix (Nash) Freckmann, Roughish Witch Grass. Cp (GA, NC, SC), Pd (GA, NC, SC, VA): wet sandy, peaty, or mucky soil of pinelands; uncommon (rare in Piedmont). May-October. S. NJ south to FL, west to TX, also in TN, West Indies and n. South America. A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, *D. meridionale*, and *D. wrightianum* from other members of the *D. acuminatum* group. [= K, Y; = *Panicum leucothrix* Nash – RAB, F, G, HC, S; < *P. leucothrix* – C; = *D. acuminatum* ssp. *leucothrix* (Nash) Freckmann & Lelong – FNA; < *P. spretum* Schultes – GW; = *P. acuminatum* Swartz var. *leucothrix* (Nash) Lelong – X; < *D. acuminatum* (Swartz) Gould & Clark var. *implicatum* (Scribner) Gould & Clark – Z]

Dichantheium linearifolium (Scribner) Gould, Low White-haired Witch Grass. Pd, Mt (GA, NC, SC?, VA), Cp (VA): dry open woods; common (rare south of VA). May-October. Se. Canada and MN south to GA and TX. [= FNA, K, Z; = *Panicum linearifolium* Scribner – RAB, C, S; > *P. linearifolium* var. *linearifolium* – F, G, WV; > *P. linearifolium* var. *wernerii* (Scribner) Fernald – F, G, WV; > *P. linearifolium* – HC; > *P. wernerii* Scribner – HC]

Dichantheium longiligulatum (Nash) Freckmann, Long-ligule Witch Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA): limesink ponds, depression meadows, cypress savannas, pine savannas, bogs, swamps; common (rare in Piedmont, rare in VA). May-September. NJ and PA south to FL, also in TN, e. TX, and Central America. Intermediate forms between this taxon and *D. spretum* occur. [= K, Y; = *Panicum longiligulatum* Nash – RAB, HC, S; < *P. lanuginosum* Elliott var. *lindheimeri* (Nash) Fernald – C, G; = *D. acuminatum* ssp. *longiligulatum* (Nash) Freckmann & Lelong – FNA; < *P. spretum* Schultes – GW; = *P. acuminatum* Swartz var. *longiligulatum* (Nash) Lelong – X; = *D. acuminatum* (Swartz) Gould & Clark var. *longiligulatum* (Nash) Gould & Clark – Z]

Dichantheium lucidum (Ashe) LeBlond, Bog Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): wet meadows, sphagnum swamps, bogs, wet woods, sphagnum streamhead pocosins, baygalls; common (uncommon in Mountains). May-October. MA and MI south to FL and TX. Vernal culms soon recline, producing a tangled mass. The papillose fertile lemma is diagnostic. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. lucidum* Ashe – G, S; > *P. lucidum* var. *lucidum* – F, HC; > *P. lucidum* var. *opacum* Fernald – F, HC; < *D. dichotomum* ssp. *lucidum* (Ashe) Freckmann & Lelong – FNA; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *lucidum* (Ashe) Lelong – X]

Dichantheium mattamuskeetense (Ashe) Mohlenbrock, Mattamuskeet Witch Grass. Cp (NC, SC, VA): wet savannas, meadows, borders of pocosin shrub swamps, thickets; uncommon (rare in VA). May-October. Se. MA south to ne. SC. Typically a robust plant, often richly tinged with dark purple-maroon. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; > *P. mattamuskeetense* var. *mattamuskeetense* – F; > *P. mattamuskeetense* var. *clutei* (Nash) Fernald – F; < *D. dichotomum* (Linnaeus) Gould ssp. *mattamuskeetense* (Ashe) Freckmann & Lelong – FNA; > *P. mattamuskeetense* Ashe – G, HC, S; > *P. annulum* Ashe var. *glabrescens* Gleason – G; > *P. clutei* Nash – HC, S, WV; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *mattamuskeetense* (Ashe) Lelong – X]

Dichantheium meridionale (Ashe) Freckmann, Matting Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): dry to damp sand of shores and woods; uncommon. May-October. Sw. Nova Scotia and MA to MN, south to e. NC, n. GA, and n. AL. A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, *D. leucothrix*, and *D. wrightianum* from other members of the *D. acuminatum* group. [= K, Y; < *Panicum lanuginosum* Elliott – RAB; < *P. leucothrix* Nash – C; > *P. meridionale* var. *meridionale* – F; > *P. meridionale* var. *albemarlense* (Ashe) Fernald – F; = *D. acuminatum* (Swartz) Gould & Clark ssp. *implicatum* (Scribner ex Nash) Freckmann & Lelong – FNA; = *P. meridionale* Ashe – G; > *P. meridionale* – HC, S, WV; > *P. albemarlense* Ashe – HC, S, WV; < *P. acuminatum* Swartz var. *unciphylum* (Trinius) Lelong – X; < *D. acuminatum* var. *implicatum* (Scribner) Gould & Clark – Z]

Dichantheium oligosanthos (Schultes) Gould var. *oligosanthos*, Few-flowered Witch Grass. Cp, Pd (GA, NC, SC, VA): sandy fields and open woods; uncommon (rare in Piedmont, rare in VA Coastal Plain). April-October. MA and MN south to FL and TX. See note under *D. fusiforme*. [= K, Z; = *Panicum oligosanthos* Schultes – RAB, HC, S; < *P. oligosanthos* – C, G; = *P. oligosanthos* var. *oligosanthos* – F; = *D. oligosanthos* ssp. *oligosanthos* – FNA]

Dichantheium oligosanthos (Schultes) Gould var. *scribnerianum* (Nash) Gould, Scribner's Witch Grass. Mt, Pd (GA, VA), Cp (NC, VA): calcareous maritime forests, dry thin woods and openings, dry prairies, usually in basic soil; uncommon in Mountains (rare in Piedmont and Coastal Plain). April-November. Sw. ME to s. British Columbia, south to se. NC, n. GA, and CA, also in n. Mexico. Throughout the U.S., but infrequent in the southeastern and western states. [= K, Z; < *Panicum oligosanthos* Schultes – RAB, C, G; = *P. oligosanthos* var. *scribnerianum* (Nash) Fernald – F; = *D. oligosanthos* ssp. *scribnerianum* (Nash) Freckmann & Lelong – FNA; = *P. scribnerianum* Nash – HC, S]

Dichantheium ovale (Elliott) Gould & Clark var. *addisonii* (Nash) Gould & Clark, Low Stiff Witch Grass. Cp (GA, NC, SC, VA), Mt (VA): dry to damp sandy woods and fields; uncommon (rare in VA). May-October. MA and MN south to FL and TX, also in n. Mexico. See note under *D. ovale* var. *ovale*. [= K, Z; = *Panicum commonsianum* Ashe – RAB, C; > *P. commonsianum* var. *commonsianum* – F, G; > *P. commonsianum* var. *addisonii* (Nash) Fernald – F, G; > *P. mundum* Fernald – F, G, HC; > *P. villosissimum* var. *pseudopubescens* (Nash) Fernald – F, G; = *D. ovale* ssp. *pseudopubescens* (Nash) Freckmann & Lelong – FNA; > *P. commonsianum* – HC, S; *P. pseudopubescens* Nash – HC, S; *P. addisonii* Nash – HC, S; *P. wilmingtongenense* Ashe – HC, S; = *P. ovale* Elliott var. *pseudopubescens* (Nash) Lelong – X]

Dichantheium ovale (Elliott) Gould & Clark var. *ovale*, Oval-flowered Witch Grass. Cp (GA, NC, SC, VA): dry to damp sandy pinelands; rare. May-October. NY to WI, south to FL and e. TX. Infrequent over most of its range except FL. In our region, the *D. ovale* double ligule character is more evident in var. *ovale*, with var. *addisonii* often having only a single ligule

about 1 mm long. Also see note under *D. consanguineum*, and note at end of descriptions regarding *Panicum malacon* (placed in synonymy here). [= K, Z; = *Panicum ovale* Elliott – RAB, X; = *D. ovale* ssp. *ovale* – FNA; > *P. ovale* – HC, S; > *P. malacon* Nash – HC, S; = *P. ovale* var. *ovale* – X]

Dichanthelium polyanthes (Schultes) Mohlenbrock, Small-fruited Witch Grass. Pd, Mt, Cp (GA, NC, SC, VA): damp to dry soil of open woods and ditches; common (absent from the outer Coastal Plain south of the Neuse River, NC). June-October. VA to s. IL, south to GA and e. TX. [= FNA; = *Panicum polyanthes* Schultes – RAB, C, F, G, GW, HC, S, WV; = *D.*

sphaerocarpon (Elliott) Gould var. ***isophyllum*** (Scribner) Gould & Clark – K, Z]

Dichanthelium portoricense (Desvaux ex Hamilton) B.F. Hansen & Wunderlin, Puerto Rican Witch Grass. Cp (GA, NC, SC): moist pine savannas and flatwoods; common (uncommon in SC). May-September. NC south to FL, west to TX, also in West Indies. [= *Panicum portoricense* Desvaux ex Hamilton – RAB, HC, S; = *D. portoricense* ssp. *portoricense* – FNA; < *D. sabulorum* (Lamarck) Gould & Clark var. *thinium* (Hitchcock & Chase) Gould & Clark – K, Z; = *P. portoricense* var. *portoricense* – X]

Dichanthelium ravenelii (Scribner & Merrill) Gould, Ravenel's Witch Grass. Cp, Pd (GA, NC, SC, VA): dry sandy or rocky thin woods and openings, sometimes in moist soils; common (rare in VA). May-October. NJ south to FL, west to e. TX, north to IA. [= FNA, K, Z; = *Panicum ravenelii* Scribner & Merrill – RAB, C, F, G, HC, S]

Dichanthelium scabriusculum (Elliott) Gould & Clark, Tall Swamp Witch Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): moist, low, open or shaded woodlands, often along streams or ditches; common in Coastal Plain, uncommon in Piedmont (rare in VA). May-October. Se. MA south to FL, west to e. TX and AR. [< *Panicum scabriusculum* – RAB, C, GW; > *P. scabriusculum* – F, HC, S; > *P. aculeatum* Hitchcock & Chase – F, G, HC, S; < *D. scabriusculum* – FNA, K, Z; > *P. scabriusculum* var. *scabriusculum* – G]

Dichanthelium scoparium (Lamarck) Gould, Velvet Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): moist sandy soil of woodland openings and ditches; common (uncommon in Mountains). May-October. MA and MI south to FL and TX, also in Mexico and West Indies. The dense, velvety pubescence of the internodes, sheaths, and blades of this taxon, combined with the viscid band below the nodes, are diagnostic. [= FNA, K, Z; = *Panicum scoparium* Lamarck – RAB, C, F, G, GW, HC, S]

Dichanthelium species 2 (=webberianum), Webber's Witch Grass. Cp (GA, NC, SC): moist pine savannas and flatwoods; uncommon. May-August. Disjunct in se. NC and SC from GA and FL. [= *Panicum webberianum* Nash – RAB, HC, S; < *D. portoricense* (Desvaux ex Hamilton) B.F. Hansen & Wunderlin ssp. *patulum* (Scribner & Merrill) Freckmann & Lelong – FNA; < *D. sabulorum* (Lamarck) Gould & Clark var. *patulum* (Scribner & Merrill) Gould & Clark – K, Z; < *P. portoricense* Desvaux ex Hamilton var. *nashianum* (Scribner) Lelong – X]

Dichanthelium species 3 (=lancearium), Nash's Witch Grass. Cp, Pd (GA, NC, SC, VA): moist pine savannas and flatwoods, moist to dry openings in maritime forests, dry pine and oak sandhills; common (uncommon in Piedmont, rare in VA Piedmont and Coastal Plain). May-September. Se. VA to FL, west to e. TX, also in West Indies and Central America. This and *D. portoricense* appear to intergrade in our region, and =*lancearium* is treated as part of *D. portoricense* ssp. *patulum* in FNA, whose concept of ssp. *patulum* includes *Panicum webberianum* (*D. species 2* here) and *P. patentifolium*, both of which appear to merit recognition (=webberianum as a species and =patentifolium as at least a variety). [= *Panicum lancearium* Trinius – RAB, C, G; > *P. lancearium* var. *lancearium* – F; > *P. lancearium* var. *patulum* (Scribner & Merrill) Fernald – F; < *D. portoricense* (Desvaux ex Hamilton) B.F. Hansen & Wunderlin ssp. *patulum* (Scribner & Merrill) Freckmann & Lelong – FNA; > *P. lancearium* – HC, S; > *P. patulum* (Scribner & Merrill) Hitchcock – HC, S; < *D. sabulorum* (Lamarck) Gould & Clark var. *patulum* (Scribner & Merrill) Gould & Clark – K, Z; < *P. portoricense* Desvaux ex Hamilton var. *nashianum* (Scribner) Lelong – X]

Dichanthelium species 5 (=neuranthum), Nerved Witch Grass. Cp (GA, NC): maritime wet grasslands and wet savannas near the coast; rare. May-September. Disjunctly in se. NC, se. SC, GA, FL, s. MS, TX, Bahamas, Cuba, and Belize. Treated as *D. aciculare* ssp. *neuranthum* in FNA, but distinctive morphology and habitat argue for recognition as a species. Can occur with the similar-appearing *D. caerulescens*, from which it differs by having spikelets that are longer (1.8-2.0 mm vs. 1.4-1.8), rounded vs. obtuse to sub-acute, and pubescent vs. glabrous; longer first glumes (0.8-1.0 mm vs. 0.3-0.8); leaves 15× or more as long as wide vs. 10-15×; and a nearly strict panicle. FNA gives a spikelet length of 2-2.8 mm, well beyond the length of spikelets on specimens we have seen throughout the range. As FNA provides no synonymy, it is possible that its concept of "*neuranthum*" includes entities treated separately here, or entities outside the range of this flora. [= *Panicum neuranthum* Grisebach – RAB, HC, S; = *D. aciculare* (Desvaux ex Poiret) Gould & Clark ssp. *neuranthum* (Grisebach) Freckmann & Lelong – FNA; < *D. aciculare* – K, Z]

Dichanthelium species 9 (=cryptanthum), Hidden-flowered Witch Grass. Cp (NC, SC): wet meadows and ditches, streamside openings; rare. May-September. NC (or NJ?) to MS (or TX?) (previous concepts of this taxon and its range are unclear). In the field, this taxon can be mistaken for *D. yadkinense*; it is readily distinguished by its scabrous peduncle and membranous ligules. [= *Panicum cryptanthum* Ashe – F, HC, S; < *P. scabriusculum* Elliott – RAB, C, GW; < *D. scabriusculum* (Elliott) Gould & Clark – FNA, K, Z; = *P. scabriusculum* var. *cryptanthum* (Ashe) Gleason – G]

Dichanthelium species 10 (=curtifolium), Short-leaved Witch Grass. Cp (SC), Mt (NC): bogs, sphagnous streamhead swamps, mountain streams; uncommon (rare in Piedmont and Mountains). April-September. Ranging disjunctly in w. NC and e. TN, e. SC, FL, and MS. The combination of characters is quite distinctive for the genus in our region. [= *Panicum curtifolium* Nash – RAB, HC, S; = *D. ensifolium* (Baldwin ex Elliott) Gould ssp. *curtifolium* (Nash) Freckmann & Lelong – FNA; < *D. acuminatum* (Swartz) Gould & C.A. Clark var. *implicatum* (Scribn.) Gould & C.A. Clark – K, Z; = *Panicum ensifolium* Baldwin ex Elliott var. *curtifolium* (Nash) Lelong – X]

Dichanthelium sphaerocarpon (Elliott) Gould, Round-fruited Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): moist or dry thin woods, meadows, and ditches, often in dry sandy soil; common. May-October. MA, VT, OH, and KA south to FL and TX, also in Mexico. [= FNA, K, Z; = *Panicum sphaerocarpon* Elliott – RAB, C, WV; > *P. sphaerocarpon* var. *sphaerocarpon* – F, G, HC, S; > *P. sphaerocarpon* var. *inflatum* (Scribner & J.G. Smith) Hitchcock & Chase – F, G, HC, S]

Dichantheium sphagnicola (Nash) LeBlond, Peaty Witchgrass. Cp (FL, GA): edges of cypress swamps, in sphagnum bogs, moist shady places; rare (but poorly known). May-October. GA (Chatham County) to FL; should be sought in se. SC. Treated in synonymy with *Panicum dichotomum* by RAB, but no specimen is known from the Carolinas. This species is similar to *D. lucidum* in appearance, and differs most readily by its larger pubescent spikelets with smooth fertile lemma and palea. [= Q; < *Panicum dichotomum* Linnaeus – RAB; < *D. dichotomum* (Linnaeus) Gould ssp. *lucidum* (Ashe) Freckmann & Lelong – FNA; = *P. sphagnicola* Nash – HC, S; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *lucidum* (Ashe) Lelong – X]

Dichantheium spretum (Schultes) Freckmann, Eaton's Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): wet sands and peats of bogs, savannas, meadows, and shores; rare (rare in NC and VA). May-September. ME south to n. FL, LA and e. TX. Intermediate forms between this taxon and *D. longiligulatum* occur. [= K, Y; = *Panicum spretum* Schultes – RAB, C, F, G, HC, S; = *D. acuminatum* (Swartz) Gould & Clark ssp. *spretum* (Schultes) Freckmann & Lelong – FNA; < *P. spretum* – GW; = *P. acuminatum* Swartz var. *densiflorum* (Rand & Redfield) Lelong – X; = *D. acuminatum* var. *densiflorum* (Rand & Redfield) Gould & Clark – Z]

Dichantheium strigosum (Muhlenberg) Freckmann var. *glabrescens* (Grisebach) Freckmann, Hairless Witch Grass. Cp (GA): low, open sandy pinelands and hammocks; rare (?). May-October. S. GA and FL west to LA; also in West Indies, Belize. Included in synonymy with *Panicum strigosum* by RAB, but no specimen from the Carolinas has been found. [= K; = *D. strigosum* ssp. *glabrescens* (Grisebach) Freckmann & Lelong – FNA; < *Panicum strigosum* Muhlenberg – GW; = *P. polycaulon* Nash – HC, S; = *D. leucoblepharis* (Trinius) Gould & Clark var. *glabrescens* (Grisebach) Gould & Clark – Z]

Dichantheium strigosum (Muhlenberg) Freckmann var. *leucoblepharis* (Trinius) Freckmann, Dwarf Witch Grass. Cp, Mt (GA, NC, SC): sandy, acidic soils of pinelands; uncommon (rare in Mountains). May-October. NC south to FL, west to TX, also in Mexico. [= K; = *Panicum ciliatum* Elliott – RAB, HC, S; = *D. strigosum* ssp. *leucoblepharis* (Trinius) Freckmann & Lelong – FNA; = *P. strigosum* Muhlenberg var. *leucoblepharis* (Trinius) Lelong – X; = *D. leucoblepharis* (Trinius) Gould & Clark var. *leucoblepharis* – Z]

Dichantheium strigosum (Muhlenberg) Freckmann var. *strigosum*, Rough-hairy Witch Grass. Cp (GA, NC, SC, VA): moist soils of pine flatwoods, savannas, and pocosins, also in boggy situations; uncommon (rare in VA). May-September. Se. VA south to FL, west to TX, also in TN, e. Mexico, Mesoamerica, n. South America, and West Indies. [= K; = *Panicum strigosum* Muhlenberg – RAB, C, F, G, GW, HC, S; = *D. strigosum* ssp. *strigosum* – FNA; = *P. strigosum* var. *strigosum* – X; = *D. leucoblepharis* (Trinius) Gould & Clark var. *pubescens* (Vasey) Gould & Clark – Z]

Dichantheium tenue (Muhlenberg) Freckmann & Lelong, White-edged Witch Grass. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): wet peaty or sandy soil pineland savannas, flatwoods, bogs, and meadows; common (uncommon in Piedmont, rare in Mountains). May-October. NJ south to FL, west to TX, also in Mesoamerica and Cuba. This treatment of *D. tenue* includes plants from northern Alabama formerly recognized as *Panicum concinnius*, with spikelets 1.2-1.4 mm long but otherwise possessing the characters of *D. tenue*. [= FNA; = *Panicum tenue* Muhlenberg – RAB, C; > *P. tenue* – F, HC, S; > *P. albomarginatum* Nash – F, HC, S; > *P. trifolium* Nash – F, G, HC, S; < *P. ensifolium* Baldwin – G; > *P. concinnius* Hitchcock & Chase – HC, S; < *D. dichotomum* (Linnaeus) Gould var. *tenue* (Muhlenberg) Gould & Clark – K, Z]

Dichantheium villosissimum (Nash) Freckmann var. *villosissimum*, White-haired Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): dry sandy soil of open woods and prairies; common (uncommon in VA). April-September. MA south to FL, west to TX, also in Mexico and Mesoamerica. Appearing to be related to *D. ovale* based on such characters as the double ligule. [= K, Y; = *Panicum villosissimum* Nash – RAB, C, HC, S, WV; = *P. villosissimum* var. *villosissimum* – F, G; = *D. ovale* (Elliott) Gould & Clark ssp. *villosissimum* (Nash) Freckmann & Lelong – FNA; = *P. ovale* Elliott var. *villosum* (A. Gray) Lelong – X; < *D. acuminatum* (Swartz) Gould & Clark var. *villosum* (A. Gray) Gould & Clark – Z]

Dichantheium wrightianum (Scribner) Freckmann, Wright's Witch Grass. Cp (GA, NC, SC, VA): limesink ponds and meadows, cypress savannas, pine savannas, bogs; uncommon (rare in VA). May-September. MA south to FL, west to TX, also in Cuba and Mesoamerica. A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, *D. meridionale*, and *D. leucothrix* from other members of the *D. acuminatum* group. [= FNA, K, Y; = *Panicum wrightianum* Scribner – RAB, C, F, G, HC, S; < *P. spretum* Schultes – GW; = *D. acuminatum* (Swartz) Gould & Clark var. *wrightianum* (Scribner) Gould & Clark – Z]

Dichantheium yadkinense (Ashe) Mohlenbrock, Spotted-sheath Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): floodplain forests, thickets, bottomlands, and swamps, often on alluvial deposits; common (uncommon in Coastal Plain, uncommon in Mountains, uncommon in VA). May-October. NJ and MI south to GA and TX, also in Mexico. Sheaths often with wart-like glands. This taxon resembles *D. species 9* (= *cryptanthum*), from which it differs most readily by its hairy ligule (vs. membranous) and smooth peduncle (vs. antrorsely scabrous). [= Q; < *Panicum dichotomum* Linnaeus – RAB, GW; = *P. yadkinense* Ashe – C, F, G, HC, S, WV; = *D. dichotomum* ssp. *yadkinense* (Ashe) Freckmann & Lelong – FNA; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *yadkinense* (Ashe) Lelong – X]

Dichantheium chamaelonche (Trinius) Freckmann & Lelong ssp. *breve* (Hitchcock & Chase) Freckmann & Lelong, Short Witch Grass, endemic to c. and s. FL, primarily near the east coast. [= FNA; = *Panicum breve* Hitchcock & Chase – HC, S; = *D. dichotomum* (Linnaeus) Gould var. *breve* (Hitchcock & Chase) Gould & Clark – K, Z; = *P. chamaelonche* Trinius var. *breve* (Hitchcock & Chase) Lelong – X]

Dichantheium dichotomum (Linnaeus) Gould var. *glabrifolium* (Nash) Gould & Clark, Smooth-leaved Witch Grass, endemic to peninsular FL, mostly near the west coast. Like *D. chamaelonche* ssp. *breve*, this taxon appears to be more closely related to *D. chamaelonche* than to *D. dichotomum* or *D. ensifolium*. [= K, Z; = *Panicum glabrifolium* Nash – HC, S; < *P. chamaelonche* Trinius var. *chamaelonche* – X]

Dichantheium leibergii (Vasey) Freckmann, Leiberg's Witch Grass, NY and PA west to Alberta, ND, and KS. [= FNA, K, Z; = *Panicum leibergii* (Vasey) Scribner – C, F, G, HC]

Dichantheium malacophyllum (Nash) Gould, Soft-leaf Witch Grass, KY and TN west to KS and TX. Primarily a plant of cedar glades and dry calcareous soils. Reported from SC by FNA, but source of record has not been identified. [= FNA, K, Z; = *Panicum malacophyllum* – F, G, HC, S]

Dichanthelium nudicaule (Vasey) B.F. Hansen & Wunderlin. Cp (AL, FL, MS): bogs, wet pine savannas; rare. W. FL Panhandle and s. AL west to MS. [= Q; = *Panicum nudicaule* Vasey] {add synonymy}

Dichanthelium wilcoxianum (Vasey) Freckmann is shown as occurring in SC and MS on the range map in FNA, but the source of these records is not known for this plant primarily of dry prairies in the Upper Midwest. It is not treated here.

Dichanthelium xanthophysum (A. Gray) Freckmann, Slender Witch Grass, ME south to PA, WV, west to SD; Nova Scotia to Saskatchewan. [= FNA, K, Z; = *Panicum xanthophysum* A. Gray – C, F, G, HC, WV]

Panicum chrysopsidifolium Nash is treated variously by the cited sources. According to Z, who examined an isotype collection and found the ligule to be 2.5 mm long, it belongs to *D. acuminatum* var. *acuminatum*. Plants referred to by HC all have ligules < 1 mm long, and apparently belong to the *D. aciculare* complex. These plants are described as having densely villous nodes, internodes, sheaths, and blades; the blades 5-10 cm long and 3-5 mm wide; and spikelets 1.9-2.2 mm long, obovate, and villous. HC gives a range of se. VA to FL, west to TX, along the Coastal Plain in sandy oak or pine woods. This entity needs further scrutiny.

Panicum glutinoscabrum Fernald is an entity known only locally from "boggy spots" in southeastern Virginia. It is treated as a full species by F, but is placed in synonymy with *Dichanthelium scoparium* (Lamarck) Gould by FNA; with *D. acuminatum* (Swartz) Gould & Clark var. *acuminatum* by Z; with *P. lanuginosum* Elliott var. *fasciculatum* (Torrey) Fernald by C; and with *P. huachucae* Ashe var. *fasciculatum* (Torrey) Hubb. by HC. *Panicum glutinoscabrum* is described as having culms 7-9 dm high; elongate internodes with cinereous puberulence and black, warty, viscid glands; villous nodes; glutinous-warty and scabrous sheaths and blades; ligule 4-5 mm long; minutely puberulent panicle axis; spikelets ellipsoid, subacute, 1.7-1.8 mm long, pubescent; first glume subacute, 0.6-0.7 mm long. Y concedes that "I am not able to render a decision on the poorly known *P. glutinoscabrum* Fernald, but I suggest that it is a hybrid between a member of the *D. acuminatum* complex and *D. scoparium* (Lam.) Gould - the latter contributing the genes for height and viscid sheaths."

Panicum malacon Nash, here placed in synonymy with *Dichanthelium ovale* var. *ovale*, needs additional study. It is distinguished by HC and S as having spikelets 3-3.2 mm long with a first glume situated conspicuously below the second glume and sterile lemma, half or more as long as the spikelet; and leaves 3-5 mm wide, puberulent beneath, and puberulent to glabrous above. The leaf width and puberulence characters are not consistent with descriptions of *D. ovale*, and the placement of *P. malacon* within *D. ovale* by current treatments (including this one) may be in error. The description of *P. malacon* in RAB differs greatly from that of HC and S, and falls well outside the range of *D. ovale* characters. In RAB, *P. malacon* is described as having spikelets 3.5-4 mm long, and leaves 5-14 mm wide. This description may be based on specimens from the Sandhills of SC at NCU identified as *P. malacon* and matching the RAB description. These specimens appear to be misidentified collections of *D. oligosanthos* var. *oligosanthos*.

Digitaria Haller 1768 (Crab Grass)

A genus of about 200 species, primarily in the tropics and subtropics. Most of our species occur primarily in disturbed situations; their original distributions and habitats are now obscure. References: Wipff in FNA (2003a); Webster (1987)=Z; Wipff & Hatch (1994)=Y; Wipff (1996b)=X; Webster (1980).

- 1 Inflorescence an open panicle; spikelets long-pedicellate, borne singly at the ends of long panicle branches; [section *Pennatae*] *D. cognata* var. *cognata*
- 1 Inflorescence of 2-several spikelike racemes borne digitately or in close proximity near the summit of the culm; spikelets sessile or short-pedicellate, borne more-or-less closely spaced along the racemes.
 - 2 Rachis of each raceme narrow, trigonous, only slightly (if at all) winged.
 - 3 Spikelets 4.2-5.9 mm long *D. insularis*
 - 3 Spikelets 1.3-3.6 mm long.
 - 4 Spikelets in 2s on the middle portions of the primary branches, the pedicels not adnate; upper lemmas gray, yellow, and/or purple-tinged when immature, purple at maturity *D. texana*
 - 4 Spikelets in groups of 2-5 on the middle portions of the primary branches, the longer pedicels often adnate to the primary branch for a portion of their lengths; upper lemmas brown when immature, dark brown at maturity.
 - 5 Spikelets 1.7-2.2 mm long; plants 3-10 dm tall; racemes to 10 cm long; upper sheaths glabrous, lower sheaths glabrous to sparsely pilose *D. filiformis* var. *filiformis*
 - 5 Spikelets 2.0-2.8 mm long; plants 8-15 dm tall; racemes to 25 cm long; upper sheaths glabrous or pilose, lower sheaths densely pilose *D. villosa*
 - 2 Rachis of each raceme broad (0.5-1 mm wide), winged, the wings as wide as or wider than the rachis proper.
 - 6 Lower sheaths glabrous; second glume 0.75-1× as long as the first glume (which may be ; fertile lemma dark brown or black at maturity (or pale brown or gray in *D. longiflora*).
 - 7 Hairs of the spikelet minutely capitate; second glume ca. 1× as long as the first glume; spikelets 1.7-2.3 mm long *D. ischaemum*
 - 7 Hairs of the spikelet not minutely capitate; second glume ca. 0.75× as long as the first glume; spikelets 1.2-1.7 mm long *D. violascens*
 - 6 Lower sheaths pilose; second glume 0.3-0.6× as long (to 0.8× as long in *D. ciliaris*) as the first glume; fertile lemma white, tan, or grayish-brown at maturity.
 - 8 Spikelets 1.5-1.8 mm long, villous with crinkled hairs; pedicels glabrous, terete in cross-section *D. serotina*
 - 8 Spikelets (1.7-) 2.4-4.1 mm long, glabrous, scabrous, or pubescent with straight hairs; pedicels scabrous, 3-angled in cross-section; [section *Digitaria*].
 - 9 Spikelets (1.7-) 2.5-3.4 mm long, averaging 3.0 mm long or shorter; leaf blades pilose over the upper surface *D. sanguinalis*
 - 9 Spikelets 2.6-4.1 mm long, averaging 3.1 mm long or longer; leaf blades glabrous except for a few hairs on the upper surface at the base.
 - 10 Lower lemma of the sessile spikelet with 5 equidistant nerves; lowermost inflorescence node glabrous or pubescent with hairs < 0.4 mm long; apex of the first glume rounded to truncate *D. bicornis*
 - 10 Lower lemma of sessile spikelet with the lateral nerves crowded to the margins; lowermost inflorescence node pubescent with hairs > 0.4 mm long; apex of the first glume acute *D. ciliaris*

Digitaria bicornis (Lamarck) Roemer & J.A. Schultes. Cp (FL, GA, NC, SC): sandy fields, lawns, roadsides, disturbed places; common. Webster (1980) believed that this species is likely to occur in VA and MD, as well. Whether or not it is introduced is unclear; it is now widely distributed in the tropics and subtropics worldwide. [= FNA, K, Z]

Digitaria ciliaris (Retzius) Köler, Southern Crab Grass. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC): sandy fields, roadsides, and disturbed areas; common? August-October. [= C, FNA, K, Z; = *D. sanguinalis* var. *ciliaris* (Retzius) Parlatores – F, HC]

Digitaria cognata (J.A. Schultes) Pilger, Fall Witch Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA): sandy fields and roadsides; common (rare in VA). July-October. Wipff & Hatch (1994) discuss the reasons for including *Leptoloma* in *Digitaria*. [= FNA; = *Digitaria cognata* var. *cognata* – K; = *Leptoloma cognatum* (J.A. Schultes) Chase – RAB, C, F, G, HC, S; = *D. cognatum* ssp. *cognatum* – Y]

Digitaria filiformis (Linnaeus) Köler var. *filiformis*. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (uncommon in Mountains). September-October. Var. *filiformis*, with pubescent spikelets, is widespread in e. North America. Var. *laeviglumis* (Fernald) J. Wipff, with glabrous spikelets, occurs in New England. Var. *dolichophylla* (Henrard) J. Wipff occurs in s. FL, Cuba, and PR. See Wipff (1996) for additional discussion. [= RAB, C, F, FNA, G, X; = *D. filiformis* – HC, K; = *Syntherisma filiformis* (Linnaeus) Nash – S; < *D. filiformis* – W, WV]

Digitaria insularis (Linnaeus) Mez ex Ekman, Sourgrass. Cp (AL, FL, MS): moist areas; rare. FL, AL, and MS west to TX; West Indies; Mexico, Central America, South America. [= FNA, K; = *Trichachne insularis* (Linnaeus) Nees – HC; = *Valota insularis* (Linnaeus) Chase – S]

* *Digitaria ischaemum* (Schreber) Muhlenberg, Smooth Crab Grass. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, lawns, disturbed areas; common, native of Eurasia. July-October. Two varieties have sometimes been recognized. Var. *ischaemum* has racemes (1-) 2-6, 1-9 (-10) cm long, mostly curved and plants mostly to 4 dm tall. Var. *mississippiensis* (Gattinger) Fernald has racemes 5-7, 6-15 cm long, mostly stiff and straight and plants to 10 dm tall. [= C, FNA, K, W, WV; > *D. ischaemum* var. *ischaemum* – F, G, HC; > *D. ischaemum* (Schreber) Muhlenberg var. *mississippiensis* (Gattinger) Fernald – F, G, HC; = *D. ischaemum* var. *ischaemum* – RAB; = *Syntherisma ischaemum* (Schreber) Nash – S]

* *Digitaria sanguinalis* (Linnaeus) Scopoli, Northern Crab Grass. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common. July-October. [= RAB, FNA, C, G, K, W, WV, Z; = *D. sanguinalis* var. *sanguinalis* – F, HC; *Syntherisma sanguinalis* (Linnaeus) Dulac – S]

Digitaria serotina (Walter) Michaux, Dwarf Crab Grass. Cp (FL, GA, SC, VA): sandy woodlands; rare (rare in VA). October. [= RAB, C, F, FNA, G, GW, HC, K; = *Syntherisma serotina* Walter – S]

* *Digitaria texana* A.S. Hitchcock, Texas Crabgrass. Cp (VA): disturbed areas; rare, native of coastal Texas. Established in City of Virginia Beach, VA (VBA 2007). Also reported for St. Johns County, FL, adjacent to our area. [= FNA, HC, K] {add to synonymy}

Digitaria villosa (Walter) Persoon. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): sandy fields, roadsides; common (rare in VA). September-October. [= HC, K; = *D. filiformis* var. *villosa* (Walter) Fernald – RAB, C, F, FNA, G, X; = *Syntherisma villosa* Walter – S]

* *Digitaria violascens* Link. Cp (FL, GA, NC, SC), Pd (GA, SC), Mt (GA): sandy fields, roadsides, and woodland borders; common. September-October. [= C, FNA, G, HC, K; = *D. ischaemum* var. *violascens* (Link) Radford – RAB; ? *Syntherisma floridana* (A.S. Hitchcock) A.S. Hitchcock – S]

* *Digitaria eriantha* Steudel ssp. *pentzii* (Stent) Kok, Pangola Grass. Cp (FL): pastures; rare, native of Africa. Introduced in n. FL (Wunderlin & Hansen 2003, 2006). [= FNA; < *D. eriantha* – K; = *D. pentzii* Stent] {not yet keyed; add to synonymy}

* *Digitaria horizontalis* Willdenow, Jamaican Crabgrass. Reported for SC on the basis of a specimen at NCU (Kartesz 1999). {check specimen} [= FNA, K] {not yet keyed; add to synonymy}

* *Digitaria longiflora* (Retzius) Persoon, Indian Crabgrass. Cp (FL): lawns, roadsides, pastures; uncommon, native of Asia and Africa. Alachua, Dixie Duval, and Holmes counties southward to s. FL. [= FNA, K] {not yet keyed}

* *Digitaria nuda* Schumacher. Cp (FL) disturbed areas; rare, native of Africa. In our area, known only from Columbia County, FL. [= FNA, K; *Syntherisma nuda* (Schumacher) A.S. Hitchcock] {not yet keyed; add to synonymy}

Dinebra Jacquin 1809 (Viper Grass)

References: Barkworth in FNA (2003a).

* *Dinebra retroflexa* (Vahl) Panzer, Viper Grass, native of Africa and s. Asia, has been collected as a waif in Mecklenburg County, NC (Mellichamp, Matthews, & Smithka 1987). [= FNA, K] {not keyed}

Distichlis Rafinesque 1819 (Saltgrass)

A genus of about 5 species, of North, Central, and South America, and Australia. References: Barkworth in FNA (2003a).

Identification notes: When sterile, *Distichlis spicata* is easily confused with *Sporobolus virginicus*, with which it sometimes occurs. *Distichlis spicata* is generally a coarser plant, and lacks long hairs around the collar of the sheath; *Sporobolus virginicus* is more delicate, and typically has long hairs on either side of the collar.

Distichlis spicata (Linnaeus) Greene, Saltgrass, Spike Grass. Cp (FL, GA, NC, SC, VA): coastal marshes and shores, especially common in hypersaline flats (where infrequent tidal inundation is followed by evaporation); common. June-October. Two varieties (or subspecies or species) have often been recognized: var. *spicata* ranging along the Atlantic coast from Nova Scotia and Prince Edward Island south to tropical America, and on the Pacific coast of North America, and var. *stricta* (Torrey) Scribner widespread in saline situations in western North America. These do not appear to warrant taxonomic recognition

(Barkworth in FNA 2003a). [= RAB, FNA, GW, K, S; > *D. spicata* var. *spicata* – C; > *D. spicata* – F, G, HC; > *D. spicata* ssp. *spicata*]

Echinochloa Palisot de Beauvois 1812 (Barnyard-grass, Jungle-rice)

A genus of 4-5- species of the tropics and warm temperate regions. References: Michael in FNA (2003a). Key based in part on C.

- 1 Panicle elongate, the branches few, distant, unbranched, and short, to 2 (-3) cm long; spikelets awnless; leaves 3-6 (-9) mm wide *E. colonum*
- 1 Panicle broader, the branches numerous, approximate, often further branched, short to long, some (at least) exceeding 2 cm long; spikelets awnless or awned; leaves 5-30 mm wide.
- 2 Lower sheaths usually papillate-pubescent; fertile lemma 2.5-4× as long as wide..... *E. walteri*
- 2 Lower sheaths glabrous; fertile lemma 1.5-2.5× as long as wide.
- 3 Inflorescence nodding; awns 4-29 mm long..... *E. cruspavonis* var. *cruspavonis*
- 3 Inflorescence erect, stiff; awns 0-25 mm long.
- 4 Second glume and sterile lemma hairy or scabrous to nearly glabrous, the hairs usually not papillose-based; fertile lemma obtuse or broadly acute, with a thin, membranous (later withering) tip set off from the body by a line of minute hairs.
- 5 Panicle fairly open, the branches erect, appressed, or spreading; spikelets green or purple-tinged, awnless or with a well-developed awn (to 25 mm long); leaves 5-15 mm wide; plants mostly 3-7 dm tall..... *E. crusgalli* var. *crusgalli*
- 5 Panicle very crowded, the branches appressed to slightly spreading, the tips often incurved; spikelets purplish-brown, awnless (or with awn to 2 mm long); leaves mostly 15-30 mm wide; plants mostly 7-15 dm tall..... *E. frumentacea*
- 4 Second glume and sterile lemma usually with stout, papillose-based hairs on the veins; fertile lemma acuminate, abruptly narrowed to a firm, persistent tip.
- 6 Spikelets < 3.5 mm long, not including the awn (if present); sterile lemma awnless or with an awn to 6 (-10) mm long..... *E. muricata* var. *microstachya*
- 6 Spikelets > 3.5 mm long, not including the awn (if present); sterile lemma usually awned (rarely awnless), the awn 6-25 mm long..... *E. muricata* var. *muricata*

* ***Echinochloa colonum*** (Linnaeus) Link, Jungle-rice. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, SC, NC): fields, ditches, disturbed wet areas; uncommon (rare in VA), native of the Old World tropics. July-October. The debate over the appropriate grammatical treatment and therefore spelling of the epithet is discussed in detail in Ward (2005b). [= *E. colonum* – RAB, C, F, G, GW, HC; = *E. colona* – FNA, K, S, orthographic variant]

* ***Echinochloa crusgalli*** (Linnaeus) Palisot de Beauvois var. *crusgalli*, Barnyard-grass. Cp (FL, VA), Pd (VA), Mt (VA), {GA, NC, SC, VA}: {habitats}; common. July-October. [= C, G; < *E. crusgalli* – RAB, GW, WV (also see *E. muricata*); = *E. crus-galli* – K, orthographic variant; < *E. crusgalli* – F, FNA; < *E. crus-galli* ssp. *crus-galli* – S (also see *E. muricata*)]

Echinochloa cruspavonis (Kunth) J.A. Schultes var. *cruspavonis*. Cp (FL), {AL, MS} July-October. [< *E. crus-pavonis* – HC; = *E. crus-pavonis* var. *crus-pavonis* – FNA, K, orthographic variant]

* ***Echinochloa frumentacea*** Link, Japanese Millet, Billion-dollar Grass, White Panic. Cp (NC), Pd (VA): disturbed areas; rare, native of Asia. July-October. [= F, FNA, K, WV; < *E. crusgalli* – RAB, GW; = *E. crusgalli* (Linnaeus) Palisot de Beauvois var. *frumentacea* (Link) W. Wight – C, G; = *E. crus-galli* ssp. *edulis* A.S. Hitchcock – S]

Echinochloa muricata (Palisot de Beauvois) Fernald var. *microstachya* Wiegand, Barnyard-grass. Mt (VA), {GA, NC, SC, VA}: {habitat}; {rarity}. July-October. [= C, FNA, K; < *E. crusgalli* – RAB, GW, WV; = *E. pungens* (Poiret) Rydberg var. *microstachya* (Wiegand) Fernald & Griscom – F; = *E. microstachya* (Wiegand) Rydberg – G; < *E. crus-galli* ssp. *crus-galli* – S]

Echinochloa muricata (Palisot de Beauvois) Fernald var. *muricata*, Barnyard-grass. Cp (FL, NC, VA), Pd (VA), Mt (VA): interdune wetlands, {other habitats}. July-October. [= C, FNA, K; < *E. crusgalli* – RAB, GW, WV; > *E. pungens* (Poiret) Rydberg var. *pungens* – F; > *E. pungens* var. *ludoviciana* (Wiegand) Fernald & Griscom – F; = *E. muricata* – G; < *E. crus-galli* ssp. *crus-galli* – S]

Echinochloa walteri (Pursh) Heller. Cp (FL, GA, NC, SC, VA), Pd (GA): marshes; common. July-October. MA south to FL, west to TX on the outer Coastal Plain; also inland from OH west to WI, south to MO and AR. [= RAB, C, F, FNA, GW, HC, K, S, W]

Eleusine Gaertner 1788 (Yard Grass)

A genus of about 9 species, native to Africa and South America. References: Hilu in FNA (2003a). Key based on FNA.

- 1 Panicles with 1-3 branches, attached in a single digitate cluster..... *E. tristachya*
- 1 Panicles with 4-20 branches, 1-2 of these attached below the terminal digitate cluster.
- 2 Lower glumes 2-3-veined; panicle branches 5-7 mm wide; ligule 1-2 mm long, ciliate with hairs 1-2 mm long *E. coracana* ssp. *africana*
- 2 Lower glumes 1-veined; panicle branches 3-5.5 mm wide; ligule 0.2-1 mm long, erose..... *E. indica*

* ***Eleusine coracana*** (Linnaeus) Gaertner ssp. *africana* (Kennedy & O'Byrne) Hilu & de Wet, Finger Millet. Cp (SC): disturbed areas; rare, native of Africa. There remains some doubt about the identity of the population discovered. Reported by Werth, Zeng, & Baird (1997). [= FNA, K; = *E. africana* Kennedy & O'Byrne]

* *Eleusine indica* (Linnaeus) Gaertner, Yard Grass, Goose Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): lawns, roadsides, gardens, disturbed areas; common, native of Old World. [= RAB, C, F, FNA, G, HC, K, S, W, WV]

* *Eleusine tristachya* (Lamarck) Lamarck. Cp (SC): in waste areas of wool-combing mills; rare, native of South America, perhaps only a waif in our area. Reported as introduced in additional, scattered states in e. United States, including VA (Kartesz 1999, but apparently in error), NJ (Hilu 1980) and AL (Small 1933). [= FNA, K, S]

Elionurus Humboldt & Bonpland ex Willdenow 1805 (Balsamscale)

A genus of about 15 species, native to tropical and subtropical parts of Africa and the Americas. References: Barkworth in FNA (2003a).

Elionurus tripsacoides Humboldt & Bonpland ex Willdenow, Pan-American Balsamscale. Cp (FL, GA, MS): wet savannas; rare. S. GA south to s. FL, west to s. and w. TX, and south through Central America to s. South America. Reported for sw. GA by Jones & Coile (1988), for s. MS and FL (Sorrie & Leonard 1999). [= FNA, K; = *Elyonurus tripsacoides* – GW, HC, S, orthographic variant]

Elymus Linnaeus 1753 (Wild-rye, Rye Grass)
(also see *Thinopyrum*)

A genus of about 150 species, semicosmopolitan in temperate regions. The genus, as now circumscribed, includes all allopolyploid taxa with at least one chromosome complement contributed from *Pseudoroegneria*. North American *Elymus* are allopolyploids of *Pseudoroegneria* and *Hordeum* (Helfgott & Mason-Gamer 2004). Reference: Barkworth, Campbell, & Salomon in FNA (2007a); Campbell (2000); Church (1967); Tucker (1996)=Z; Barkworth (1997)=X. This treatment largely follows Barkworth, Campbell, & Salomon in FNA (2007a).

Identification notes: Measurements of the spike include the awns, but measurements of spikelets and its components do not. Rachis internodes should be measured near the middle of the spike. Glume widths are measured at the widest point, or if the widest point is not apparent, at about 5 mm above the glume base.

- 1 Spikelets solitary at each node (occasionally paired at the lowest nodes); glumes and lemmas awned or unawned; plants caespitose to strongly rhizomatous.
 - 2 Plants strongly rhizomatous; [common and weedy introduced species]; [section *Elytrigia*] *E. repens*
 - 2 Plants caespitose; [rare natives and introductions]; [section *Gouardia*].
 - 3 Spikelets 20-30 mm long; anthers 3-6 mm long; rachis internodes hirtellous below the spikelets; [very rare introduction, reported for c. GA] [*E. semicostatus*]
 - 3 Spikelets 8-25 mm long; anthers 0.8-3 mm long; rachis internodes glabrous below the spikelets; [rare natives of glades and barrens].
 - 4 Lemma awns 15-40 mm long, longer than the body of the lemma [*E. trachycaulus* ssp. *subsecundus*]
 - 4 Lemma awns 1-13 mm long, shorter than the body of the lemma *E. trachycaulus* ssp. *trachycaulus*
- 1 Spikelets 2-3 (-5) at each node; glumes and lemmas usually awned; plants usually caespitose, occasionally short-rhizomatous.
 - 5 Both glumes (including their awn) either 0-3 mm long and subulate or 1-20 mm long and differing in length by > 5 mm, 0.1-0.6 mm wide, tapering from the base, with 0-1 distinct veins, persistent; rachis internodes 4-12 mm long, ca. 0.5 mm thick at the narrowest section.
 - 6 Spikelets appressed; lemma awns straight or curving; glumes sometimes absent, but usually 1-20 mm long, 0.1-0.6 mm wide, with a distinct vein; spikes erect or nodding *E. svensonii*
 - 6 Spikelets widely spreading to horizontal; lemma awns straight (rarely slightly curving); glumes 0-3 mm long, with no distinct veins (rarely 1 glume to 20 mm long, 0.2 mm wide); spikes usually erect.
 - 7 Lemmas pubescent *E. hystrix* var. *bigelovianus*
 - 7 Lemmas glabrous to scabrous *E. hystrix* var. *hystrix*
 - 5 Both glumes (including the awns) 10-40 mm long, usually differing in length by < 5 mm, 0.2-2.3 mm wide, lanceolate to setaceous, usually widest above the base, with 2-8 veins, persistent or disarticulating; rachis internodes slender (as above) or stout (2-5 mm long and ca. 1 mm thick at the narrowest section).
 - 8 Glume bases flat, thin, and evidently veined, or indurate for < 1 mm, the bodies not exceeding the adjacent (usually 8-15 mm long) lemmas; lemma awns usually curving outward; spikes usually nodding to pendent; internodes (2-) 4-12 mm long.
 - 9 Glumes 0.5-1.6 mm wide; lemma awns 15-40 (-50) mm long; paleas acute; rachis internodes 2-5 (-7) mm long; blades (3-) 4-15 (-20) mm wide, pale green, usually glabrous or scabridulous above *E. canadensis* var. *canadensis*
 - 9 Glumes 0.3-0.8 mm wide; lemma awns 15-25 (-35) mm long; paleas narrowly truncate; rachis internodes 5-8 (-12) mm long; blades 8-24 mm wide, dark green, usually thinly pilose above [*E. wiegandii*]
 - 8 Glume bases terete, indurate, and lacking evident veins for 0.5-4 mm, the bodies (unless indistinct from the awns) exceeding the adjacent (usually 6-12 mm long) lemmas; lemma awns straight; spikes erect or nodding; internodes 2-5 mm long (to 7 mm in *E. sp. 1*).
 - 10 Glumes persistent, 0.2-1 mm wide, with 2-4 veins, the basal 0.5-2 mm essentially straight; lemmas rarely glabrous; spikelets with 1-3 (-4) florets; spikes nodding, exerted.
 - 11 Blades glabrous to scabrous, pale dull green; spikes 7-25 cm long; internodes usually 3-5 mm long; spikelets with 2-3 (-4) florets; lemmas usually scabrous, 7-14 mm long, 1-5 mm longer than the acute paleas; flowering usually late June to late July *E. riparius*
 - 11 Blades villous to pilose, dark glossy green; spikes 4-12 cm long; internodes usually 2-3 mm long; spikelets with 1-2 (-3) florets; lemmas usually villous, 5.5-9 mm long, 0-1.5 mm longer than the obtuse paleas; flowering usually early June to early July *E. villosus*

- 10 Glumes disarticulating with the lowest floret, 0.7-2.3 mm wide, with (2-) 3-5 (-8) veins, the basal 1-4 mm clearly bowed-out; lemmas often glabrous; spikelets with (2-) 3-5 (-6) florets; [*Elymus virginicus* complex].
- 12 Spikes 2.5-6 cm wide, exserted; lemma awns 15-40 mm long; blades glabrous or villous.
- 13 Spikes with 9-18 nodes; internodes 4-7 mm long; blades usually lax, dark glossy green under the glaucous bloom; auricles 2-3 mm long, blackish at maturity; flowering usually in mid-May to mid-June *E. macgregorii*
- 13 Spikes with 15-30 nodes; internodes 3-5 mm long; blades lax, or often ascending and involute, pale dull green; auricles 0-2 mm long, brownish at maturity; flowering usually in mid-June to late July.
- 14 Spikelets (and usually also the foliage) pubescent; spikes usually 6-12 cm long; lemmas 6-10 mm long
..... *E. glabriflorus* var. *australis*
- 14 Spikelets (and usually also the foliage) glabrous to scabrous; spikes usually 9-16 cm long; lemmas 7-13 mm long
..... *E. glabriflorus* var. *glabriflorus*
- 12 Spikes 0.7-2 cm wide (including the awns), exserted or sheathed; lemma awns 1-15(20) mm long; spikelets appressed to slightly spreading; blades usually glabrous to scabridulous.
- 15 Lemma awns 1-3(5) mm long; blades often ascending, somewhat involute, those higher on the stiffly erect culms broader and more persistent; flowering usually in early July to mid-August *E. curvatus*
- 15 Lemma awns 5-15(20) mm long; blades usually spreading or lax, not markedly broader or more persistent towards the culm summit; flowering usually in mid-June to late July.
- 16 Spikes glaucous, hispidulous to villous-hirsute, often intermediate in exsertion; glumes indurate in the lowest 1-2 mm; ligules and auricles usually absent; flowering usually early July to mid-August *E. virginicus* var. *intermedius*
- 16 Spikes green to glaucous, usually glabrous to scabrous, partly included in the sheath to fully exserted; ligules and auricles often present; flowering usually mid-June to mid-July.
- 17 Spikes partly sheathed; glumes 1-2.3 mm wide, strongly indurate and bowed-out in the lowest 2-4 mm; plants usually green to yellowish-brown; nodes mostly covered *E. virginicus* var. *virginicus*
- 17 Spikes usually exserted; glumes (0.5-) 0.7-1.5 (-1.8) mm wide, moderately indurate and bowed out in the lowest 1-2 mm; plants usually glaucous, sometimes reddish-brown at maturity; nodes often exposed.
- 18 Culms usually 3-8 dm tall, with 4-6 nodes; blades 2-9 mm wide, becoming involute; spikes 3.5-11 cm long, strongly glaucous; glumes usually indurate in the lowest 1-2 mm *E. virginicus* var. *halophilus*
- 18 Culms usually 7-10 dm tall, with 6-8 nodes; blades 3-15 mm wide, flat; spikes 4-20 cm long, pale green or glaucous; glumes indurate only in the lowest 1 mm *E. virginicus* var. *jejunus*

Elymus canadensis Linnaeus var. *canadensis*, Great Plains Wild-rye, Nodding Wild-rye. Mt (NC, VA), Pd (NC, VA), Cp? (SC?): moist forests; rare. Nova Scotia, Québec, and Yukon south to NC, SC (?), OK, NM, and AZ. [= FNA; < *E. canadensis* – RAB, C, F, G, GW, K, W, WV]

Elymus curvatus Piper, Awnless Wild-rye. Ip (KY, TN): moist bottomlands and slopes; rare. NY and Québec west to British Columbia and WA, south to s. OH, KY, c. TN, OK, and n. TX. [= FNA; < *E. virginicus* Linnaeus – C; = *E. submuticus* (Hooker) Smyth & Smyth – K; = *E. virginicus* Linnaeus var. *submuticus* Hooker – F, G; < *E. virginicus* var. *virginicus* – S]

Elymus glabriflorus (Vasey) Scribner & Ball var. *australis* (Scribner & C.R. Ball) J.J.N. Campbell, Southeastern Wild-rye. {Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): } {*glabriflorus* as a whole: ME, WV, IN, IL, and IA, south to n. FL, and c. TX} [< *E. glabriflorus* – FNA; < *E. virginicus* – RAB, C, GW, W, WV; < *E. virginicus* var. *glabriflorus* (Vasey) Bush – F, "forma *australis*"; < *E. virginicus* var. *virginicus* – G, K; = *E. virginicus* var. *australis* – S]

Elymus glabriflorus (Vasey) Scribner & Ball var. *glabriflorus*, Southeastern Wild-rye. {Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): } {*glabriflorus* as a whole: ME, WV, IN, IL, and IA, south to n. FL, and c. TX} [< *E. glabriflorus* – FNA; < *E. virginicus* – RAB, C, GW, W, WV; < *E. virginicus* var. *glabriflorus* (Vasey) Bush – F, "forma *glabriflorus*"; < *E. virginicus* var. *virginicus* – G, K; = *E. virginicus* var. *glabriflorus* – S]

Elymus hystrix Linnaeus var. *bigelovianus* (Fernald) Bowden, Northern Bottlebrush Grass. Mt (NC): high elevation forests; rare. [< *Hystrix patula* Moench – RAB, G, WV; < *Elymus hystrix* – C, FNA; = *Hystrix patula* var. *bigeloviana* (Fernald) Deam – F; = *E. hystrix* var. *bigeloviana* – K, orthographic variant; < *Hystrix hystrix* (Linnaeus) Millspaugh – S]

Elymus hystrix Linnaeus var. *hystrix*, Common Bottlebrush Grass. Mt, Pd (GA, NC, SC, VA), Cp (VA): moist forests, dry forests especially over more fertile soils; common. [= K; < *Hystrix patula* Moench – RAB, G, WV; < *Elymus hystrix* – C, FNA; = *Hystrix patula* var. *patula* – F; < *Hystrix hystrix* (Linnaeus) Millspaugh – S]

Elymus macgregorii R. Brooks & J.J.N. Campbell, Early Wild-rye. Pd (GA, NC, VA), Mt (FL, NC, VA), Cp (FL, NC, VA): rich mesic forests, especially bottomlands; uncommon. ME west to SD, south to Panhandle FL and s. TX. See Campbell (2000). [= FNA; < *E. virginicus* – RAB, C, GW, W, WV; < *E. virginicus* var. *virginicus* – F, G, K, S]

* *Elymus repens* (Linnaeus) Gould, Quackgrass, Dog-grass, Witchgrass. Mt, Pd, Cp (NC, VA): roadsides, disturbed areas, pastures; uncommon, probably introduced from Europe (sometimes considered to be partially native along the coast). June-August. [= FNA, K, X; = *Elytrigia repens* (Linnaeus) Nevski – C, Z; = *Agropyron repens* (Linnaeus) Palisot de Beauvois – RAB, G, HC, S, W, WV; > *Agropyron repens* var. *repens* – F; > *Agropyron repens* var. *subulatum* (Schreber) Roemer & J.A. Schultes – F]

Elymus riparius Wiegand, Eastern Riverbank Wild-rye. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (SC?, VA): moist forests; uncommon (rare in NC). ME, Québec, Ontario, and MN south to GA and AR. [= RAB, C, F, FNA, G, GW, K, S, W, WV]

Elymus svensonii G.L. Church, Svenson's Wild-rye. Ip (KY, TN): limestone river bluffs; rare. Nc. KY south to c. TN. [= FNA, K]

Elymus trachycaulus (Link) Gould ex Shinners ssp. *trachycaulus*, Slender Wheatgrass. Mt (NC, VA): glades and barrens, over serpentine, etc.; rare. August. Greenland, Labrador, Keewatin, Nunavut, Yukon, and AK, south to w. NC, OH, IN, IL, MO, TX, Mexico and CA. [= FNA, K; < *Agropyron trachycaulum* (Link) Malte ex H.F. Lewis – RAB, W, WV; < *Elymus trachycaulus* – C; > *Agropyron trachycaulum* var. *novae-angliae* (Scribner) Fernald – F; > *Agropyron trachycaulum* var. *ciliatum* (Scribner & J.G. Smith) Gleason – G; = *Agropyron trachycaulum* – HC]

Elymus villosus Muhlenberg ex Willdenow, Downy Wild-rye. Mt, Pd, Cp (NC, SC, VA), {GA}: moist forests; uncommon. Québec, Ontario, MN, ND, and WY south to GA, AL, MS, and TX. [= RAB, C, F, FNA, G, GW, K, W, WV; = *E. striatus* Willdenow – S]

Elymus virginicus Linnaeus var. *halophilus* (Bicknell) Wiegand, Salt-marsh Wild-rye. Cp (NC, VA): brackish marshes, maritime forests and hammocks; uncommon (VA Watch List). Along the Atlantic Coast, from Nova Scotia to NC. [= F, FNA, G, K; < *E. virginicus* – RAB, C, GW; < *E. virginicus* var. *virginicus* – S]

Elymus virginicus Linnaeus var. *intermedius* (Vasey) Bush. [= FNA, G; < *E. virginicus* – RAB, C, GW, W, WV; < *E. virginicus* var. *virginicus* – F, K; < *E. virginicus* var. *hirsutiglumis* (Scribner) A.S. Hitchcock – S]

Elymus virginicus Linnaeus var. *jejunus* (Ramaley) Bush. [= F, FNA, G; < *E. virginicus* – RAB, C, GW, W, WV; < *E. virginicus* var. *virginicus* – K; < *E. virginicus* var. *virginicus* – S]

Elymus virginicus Linnaeus var. *virginicus*, Common Eastern Wild-rye, Terrell Grass. Cp (FL, GA, NC, SC, VA), Mt, Pd, Cp (NC, SC, VA): moist forests; common. [= FNA; < *E. virginicus* – RAB, C, GW, W, WV; < *E. virginicus* var. *virginicus* – F, G, K; < *E. virginicus* var. *virginicus* – S; ? *E. striatus* Willdenow – S]

Elymus elymoides (Rafinesque) Swezey ssp. *brevifolius* (J.G. Smith) Barkworth. Mt (KY): {habitat}; rare. [= FNA] {synonymy incomplete}

* *Elymus semicostatus* (Nees ex Steudel) Melderis. Reported for c. GA by Jones & Coile (1988), as *Agropyron semicostatum* Nees ex Steudel, but FNA states that known reports from North America are based on misidentifications. [= FNA, K; = *Agropyron semicostatum* Nees ex Steudel] {not keyed}

Elymus trachycaulus (Link) Gould ex Shinnars ssp. *subsecundus* (Link) A. & D. Löve, Bearded Wheatgrass, in MD, WV, and KY (Kartesz 1999). [= FNA, K; ? *Agropyron trachycaulum* (Link) Malte ex H.F. Lewis var. *glaucum* (Pease & Moore) Malte – F, G; = *Agropyron subsecundum* (Link) A.S. Hitchcock var. *subsecundum* – HC; < *Agropyron subsecundum* (Link) A.S. Hitchcock – WV]

Elymus wiegandii Fernald, Northern Riverbank Wild-rye. South to sc. PA and NJ. [= C, F, FNA, K; < *E. canadensis* – G]

Enteropogon Nees 1836

* *Enteropogon prieurii* (Kunth) W.D. Clayton. Cp (NC): on ballast at Wilmington, New Hanover County, NC; rare, native of Africa, probably only a waif. Also reported from Mobile, Baldwin County, AL (Hitchcock & Chase 1950). [= K; = *Chloris prieurii* Kunth – S]

Eragrostis Wolf 1776 (Lovegrass)

A genus of about 350 species of temperate and tropical areas. References: Peterson in FNA (2003a); Koch (1978); Peterson & Harvey (in prep.)=Z. Key adapted from Peterson & Harvey (in prep.).

- 1 Plants caespitose or rhizomatous perennials, with innovations near the base, and with or without buds in the basal sheaths.
 - 2 Plants with short, knotty, thick rhizomes; florets articulating whole.....*E. spectabilis*
 - 2 Plants without short or thick rhizomes; florets usually disarticulating.
 - 3 Caryopsis with a deep to shallow groove along the adaxial surface.
 - 4 Caryopsis dorso-ventrally compressed, flattened parallel to the side of the embryo, translucent, light brownish.....*E. curvula*
 - 4 Caryopsis laterally compressed, flattened on the side perpendicular to the embryo, or cylindrical, opaque (rarely translucent), usually reddish brown.
 - 5 Lateral veins of the lemmas conspicuous, often greenish, the lemmas strongly keeled.....*E. trichodes*
 - 5 Lateral veins of the lemmas inconspicuous and hardly evident, the lemmas sometimes weakly keeled.
 - 6 Lemmas 1.2-1.8 mm long; culms 30-70 cm tall*E. lugens*
 - 6 Lemmas 1.6-3.0 mm long; culms (30-) 40-110 (-120) cm tall.
 - 7 Spikelets 2-6-flowered, greenish with purple tinges; leaf blades 3-8 (-11) mm wide, 25-60 cm long; sheaths often densely papillose-hirsute*E. hirsuta*
 - 7 Spikelets (3-) 5-12-flowered, olive green to lead gray; leaf blades 1-3.8 mm wide, (4-) 10-35 cm long; sheaths never papillose-hirsute*E. intermedia*
 - 3 Caryopsis not grooved on the adaxial surface.
 - 8 Stamens 3.
 - 9 Spikelets 4-8.2 (-10) mm long*E. curvula*
 - 9 Spikelets 2-4.5 (-5) mm long.
 - 10 Leaf blades 25-60 cm long, 3-8 (-11) mm wide; lemmas 1.6-2.4 mm long; spikelets 1.0-1.7 mm wide*E. hirsuta*
 - 10 Leaf blades (4-) 8-22 cm long, 1-3.5 mm wide; lemmas 1.2-1.8 mm long; spikelets 0.5-1.0 (-1.3) mm wide*E. lugens*
 - 8 Stamens 2.
 - 11 Panicle 15-45 cm wide, open, diffuse, broadly ovate to obovate in outline, the panicle branches capillary; pedicels 0.5-35 (-50) mm long, longer than or shorter than the spikelets.
 - 12 Spikelets with widely spreading pedicels, the lower pedicels all generally longer than the spikelets; disarticulation of the lemmas only, the paleas persistent*E. elliotii*
 - 12 Spikelets with appressed pedicels, lower pedicels of each branch shorter than the spikelets; disarticulation usually of the whole floret.....*E. refracta*
 - 11 Panicle (1-) 2-17 (-20) cm wide, contracted to open, narrowly ovate to oblong in outline; the panicle branches stiffly spreading; pedicels (0-) 0.3-6 mm long, always shorter than the spikelets.
 - 13 Spikelets 0.7-2.4 mm wide; glumes 0.3-2.2 mm long; lemma 1.5-2.5 mm long, the apex acute (sometimes acuminate).....*E. bahiensis*
 - 13 Spikelets 2.4-5 mm wide; glumes 1.4-4 mm long; lemma 2-6 mm long, the apex acuminate to attenuate.....

- *E. secundiflora* var. *oxylepis*
- 1 Plants cespitose, geniculate or mat-forming annuals, lacking innovations or buds in the lower sheaths.
- 14 Paleas prominently ciliate-pectinate on the keels, the hairs 0.1-0.8 mm long.
- 15 Panicles contracted, narrow, spike-like, usually <1.5 cm wide..... *E. ciliaris* var. *ciliaris*
- 15 Panicles open, cylindrical to narrowly ovate, usually 1-8 cm wide.
- 16 Spikelets (1.0-) 1.5-3.5 mm long, 0.9-1.4 mm wide, 4-12-flowered; lemmas 0.7-1.1 mm long, membranous, the apex truncate to obtuse..... *E. amabilis*
- 16 Spikelets 5-12 (-18) mm long, 1.4-2.4 mm wide, 12-42-flowered; lemmas (1.3-) 1.5-2.0 mm long, chartaceous, the apex acute..... *E. cumingii*
- 14 Paleas smooth to scaberulous on the keels, the hairs (if present) <0.1 mm long.
- 17 Plants extensively stoloniferous, creeping and forming flat mats; inflorescences 1-3.5 cm long; culms (2-) 5-12 (-20) cm tall on the erect portions..... *E. hypnoides*
- 17 Plants not stoloniferous (sometimes creeping and forming flat mats); inflorescences 3-55 cm long; culms (2-) 6-130 cm tall.
- 18 Ligules membranous, glabrous..... *E. japonica*
- 18 Ligules ciliate, with a row of tiny white hairs.
- 19 Caryopsis with a deep to shallow groove along the adaxial surface.
- 20 Spikelets (4-) 5-10 (-11) mm long, 5-11 (-15)-flowered; pedicels ascending, somewhat appressed along the branches.
- 21 Spikelets ovate to oblong in outline, >1.4 mm wide; lower glume 1.2-2.3 mm long..... *E. mexicana* ssp. *mexicana*
- 21 Spikelets linear to linear-lanceolate, <1.5 mm wide; lower glume 0.7-1.7 mm long..... *E. mexicana* ssp. *virescens*
- 20 Spikelets (1.4-) 2-5 mm long, 2-6 (-7)-flowered; pedicels erect, spreading along the branches.
- 22 Panicle 10-45 (-55) cm long, 2/3 or more the height of the plant; pedicels (4-) 5-25 mm long; glandular pits absent below the nodes, branches, and rachis..... *E. capillaris*
- 22 Panicle 4-20 cm long, < 1/2 the height of the plant; pedicels 1.5-5 mm long; glandular pits often present below the nodes, branches, and rachis..... *E. frankii*
- 19 Caryopsis not grooved on the adaxial surface.
- 23 Plants with glandular pits or bands on the culm below the nodes, on the veins of the sheath, on the margins and veins of the blade, on the rachis, on the inflorescence branches and pedicels, and/or on the midveins of the lemma and palea.
- 24 Spikelets (1.7-) 2-4 mm long, 3-6-flowered..... *E. frankii*
- 24 Spikelets (2-) 3.5-20 mm long, (3-) 5-40-flowered.
- 25 Spikelets 0.6-1.3 mm wide; pedicels 1-10 mm long, flexuous and delicate, appressed or spreading..... *E. pilosa*
- 25 Spikelets 1.1-4 mm wide; pedicels 0.2-4 mm long, straight and rigid, mostly spreading.
- 26 Spikelets 6-20 mm long, 2-4 mm wide, 10-40-flowered; lemmas 2-2.8 mm long, with 1-3 crateriform glands along the keel; disarticulation of the entire florets from the persistent rachilla; anthers yellow..... *E. cilianensis*
- 26 Spikelets 4-7 (-11) mm long, 1.1-2.2 mm wide, 7-12 (-20)-flowered; lemmas 1.4-1.8 mm long, rarely with 1-2 crateriform glands along the keel; disarticulation of the lemmas only, the palea and rachilla usually persistent; anthers reddish-brown.
- 27 Inflorescence with glandular areas of spots or rings on the rachis below the panicle branch bases, the glands often shiny or yellowish; stamens 3; blade margins lacking crateriform glands..... *E. barrelieri*
- 27 Inflorescence sometimes with glandular areas of spots or crateriform pits on the rachis below the panicle branch bases, the glands usually dull and greenish-gray to straw-colored; stamens 2; blade margins sometimes with crateriform glands..... *E. minor*
- 23 Plants lacking glandular pits or bands on the culm below the nodes, on the veins of the sheath, on the margins and veins of the blade, on the rachis, on the inflorescence branches and pedicels, and/or on the midveins of the lemma and palea.
- 28 Spikelets (1.6-) 2-4 mm wide, 12-42-flowered; disarticulation of entire florets from a persistent rachilla..... [*E. uniolioides*]
- 28 Spikelets 0.6-2.5 mm wide, 3-22-flowered; disarticulation of the lemmas only, the paleas usually persistent (or deciduous), the rachilla persistent.
- 29 Spikelets 3-6-flowered..... *E. frankii*
- 29 Spikelets (3-) 5-22-flowered.
- 30 First glume 0.3-0.6 (-0.8) mm long, <0.5× as long as the lowest lemma; spikelets 0.6-1.3 mm wide; panicle branches usually whorled at the lowest 2 nodes..... *E. pilosa*
- 30 First glume 0.5-1.5 mm long, >0.5× as long as the lowest lemma; spikelets 1.2-2.5 mm wide; panicle branches solitary or paired at the 2 lowest nodes.
- 31 Pedicels widely spreading..... *E. pectinacea* var. *miserrima*
- 31 Pedicels appressed or rarely diverging up to 20 degrees from the branches..... *E. pectinacea* var. *pectinacea*

* *Eragrostis amabilis* (Linnaeus) Wright & Arnott ex Nees, Japanese Lovegrass, Feather Lovegrass. Cp (FL, GA, SC), Pd? (GA?): disturbed areas; rare, native of Old World. June. [= RAB, FNA, HC, S, Z; ? *E. tenella* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes – K]

* *Eragrostis bahiensis* (Schradler ex J.A. Schultes) J.A. Schultes, Bahia Lovegrass. Cp (FL, GA, SC): disturbed areas; rare, native of {}. Reported for SC (Kartesz 1999) and sw. GA (Jones & Coile 1988, GW, Kartesz 1999). [= FNA, GW, HC, K, S, Z]

* *Eragrostis barrelieri* Daveau, Mediterranean Lovegrass. Cp (FL, SC): waste areas near wool-combing mills, other disturbed areas; rare, native of Mediterranean Europe. Also reported for e. TN (Chester et al. 1993). [= FNA, HC, K, Z]

Eragrostis capillaris (Linnaeus) Nees, Lacegrass. Mt, Pd, Cp (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (uncommon in Piedmont and Coastal Plain). July-October. ME and WI south to GA and TX. [= RAB, C, F, FNA, G, HC, K, S, W, WV, Z]

* *Eragrostis cilianensis* (Allioni) Vignolo ex Janchen, Stinkgrass. Mt, Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA): fields, disturbed areas; common, native of Europe. July-October. [= RAB, C, FNA, G, HC, K, S, W, Z; ? *E. megastachya* (Koel.) Link – F, WV]

Eragrostis ciliaris (Linnaeus) R. Brown var. *ciliaris*. Cp (FL, GA, SC): sandy shores; rare. S. SC south to TX, Central America, West Indies, South America, Africa, and Asia. [= FNA, HC; < *E. ciliaris* – RAB, G, K, S, Z]

* *Eragrostis cumingii* Steudel, Fortyflower Lovegrass, Cuming's Lovegrass. Cp (FL, GA), {NC}. Reported for NC (Kartesz 1999) and sw. GA (Jones & Coile 1988, HC). [= FNA, K, Z; ? *E. simplex* Scribner – HC]

* *Eragrostis curvula* (Schrader) Nees, Weeping Lovegrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides; common, native of s. Africa. May-June. Very commonly planted as a roadbank stabilizer, *E. curvula* is fire resistant and shows some capability to spread into adjacent natural habitats. [= RAB, C, FNA, HC, K, WV, Z; > *E. curvula* var. *conferta* Stapf]

Eragrostis elliottii S. Watson, Elliott's Lovegrass. Cp (FL, GA, NC, SC): ultisol wet pine savannas, maritime wet grasslands, inland edges of brackish marshes, inland edges of freshwater tidal marshes, calcareously-influenced wet pine savannas; rare. September-October. NC south to FL, west to TX. [= RAB, FNA, GW, HC, K, S, Z]

Eragrostis frankii C.A. Meyer ex Steudel, Lacegrass. Mt (VA), Pd (NC, VA), Cp (VA), {FL?, GA}: disturbed areas; uncommon (NC Watch List). September. MA and MN south to FL and AR. [= RAB, C, FNA, G, GW, K, S, W, WV, Z; > *E. frankii* var. *frankii* - F, HC]

Eragrostis hirsuta (Michaux) Nees, Bigtop Lovegrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (uncommon in Mountains, rare in VA Mountains). July-October. MD south to FL, west to TX, north in the interior to TN, AR, and MO; Central America. [= RAB, C, FNA, K, S, W, WV, Z; > *E. hirsuta* var. *hirsuta* - F, G, HC; > *E. hirsuta* var. *laevivaginata* Fernald - F, G, HC]

Eragrostis hypnoides (Lamarck) Britton, Sterns, & Poggenburg, Creeping Lovegrass, Teal Lovegrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, VA): marshes, shores; uncommon. September. Throughout most of North America, south to South America. [= RAB, C, F, FNA, G, GW, HC, K, S, W, WV, Z]

Eragrostis intermedia A.S. Hitchcock, Plains Lovegrass. Cp (GA), Pd (GA, VA), {NC, SC}: {habitat}; rare. Reported for scattered locations as far east as NC and SC (Kartesz 1999), e. GA (Jones & Coile 1988), e. TN (Chester et al. 1993). [= C, F, FNA, G, HC, K, Z]

*? *Eragrostis japonica* (Thunberg) Trinius, Pond Lovegrass. Cp (FL, GA, SC): moist or wet sandy areas; rare. SC and TN south to Central America, South America, and West Indies; Old World tropics. Perhaps introduced from the Old World. Reported for SC by HC, G, and Small (1933), sw. GA by Jones & Coile (1988), and for w. TN by Chester et al. (1993). [= FNA, K, Z; ? *E. glomerata* (Walter) L.H. Dewey - G, GW, HC, S]

*? *Eragrostis lugens* Nees, Mourning Lovegrass. Cp (FL, NC, SC), Pd (GA, NC, SC): marshes, roadsides, low fields; rare, introduced (NC Watch List). June-October. Perhaps only introduced from further south and west. [= RAB, FNA, HC, K, S, W, Z]

* *Eragrostis mexicana* (Hornemann) Link ssp. *mexicana*, Mexican Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, native of w. North America and Mexico. Reported to be naturalized as far east and north as SC, DE, and MD (Kartesz 1999). [= FNA, K; > *E. neomexicana* Vasey - C, F, G, HC; > *E. mexicana* - C, F, G, HC]

* *Eragrostis mexicana* (Hornemann) Link ssp. *virescens* (J. Presl) S.D. Koch & Sánchez. Cp (FL): disturbed areas; rare, native of South America and w. North America. Reported as an introduction on ballast in MD and FL. [= FNA, K; = *E. virescens* J. Presl - HC]

* *Eragrostis minor* Host, Little Lovegrass. Pd (GA, NC, SC, VA), Mt (NC, SC, VA), Cp (FL, VA): disturbed areas; uncommon, native of Europe. July-September. [= C, FNA, K, Z; ? *E. poaeoides* Palisot de Beauvois ex Roemer & J.A. Schultes - RAB, F, G, HC, W, WV; ? *E. eragrostis* (Linnaeus) Palisot de Beauvois - S]

Eragrostis pectinacea (Michaux) Nees ex Steudel var. *pectinacea*, Carolina Lovegrass. Cp (FL, GA, NC, SC, VA?), Pd (GA, NC, SC, VA?), Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (rare in VA). ME and WA south to Central America and West Indies. [= FNA, K, Z; < *E. pectinacea* - C, GW, W; = *E. pectinacea* - F, HC, S, WV; > *E. pectinacea* - G; > *E. diffusa* Buckley - G]

Eragrostis pectinacea (Michaux) Nees ex Steudel var. *miserrima* (Fournier) J. Reeder. Cp (FL): disturbed habitats; rare. From FL and westwards and southwards. [= FNA, K, Z; = *E. tephrosanthos* J.A. Schultes - HC, S; < *E. pectinacea* - GW]

* *Eragrostis pilosa* (Linnaeus) Palisot de Beauvois var. *pilosa*. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, native of tropical regions of the Old and New World. July-October. Var. *perplexa* (L.H. Harvey) S.D. Koch is also introduced but is not known from our area. [= FNA; = *E. pilosa* - RAB, S, W; > *E. multicaulis* Steudel - F, G, HC; > *E. pilosa* - F, G, HC; < *E. pilosa* - K, WV, Z]

Eragrostis refracta (Muhlenberg) Scribner, Coastal Lovegrass. Cp (GA, NC, SC, VA), Pd (NC, SC, VA): pinelands, savannas, woodlands, marshes; common (uncommon in Piedmont). July-October. DE south to FL, west to TX. [= RAB, C, F, FNA, G, GW, HC, K, S, Z; ? *E. virginica* (Zuccarini ex Roemer) Steudel]

* *Eragrostis secundiflora* J. Presl var. *oxylepis* (Torrey) S.D. Koch, Red Lovegrass. Cp (FL, GA, NC, SC, VA): sandy roadsides, coastal dunes, and disturbed areas; rare, native of sw. United States. First reported for SC by Nelson & Kelly (1997). [= *E. oxylepis* (Torrey) Torrey - GW, HC; = *E. secundiflora* ssp. *oxylepis* S.D. Koch - FNA, K, Z; < *E. secundiflora* - S]

Eragrostis spectabilis (Pursh) Steudel, Purple Lovegrass, Tumblegrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): sandy fields, roadsides, woodlands; common. August-October. ME west to ND, south to FL and TX. [= RAB, C, FNA, G, GW, HC, K, S, W, WV, Z; > *E. spectabilis* var. *spectabilis* - F; > *E. spectabilis* var. *sparsihirsuta* Farwell - F; *E. pectinacea*, misapplied]

* *Eragrostis trichodes* (Nuttall) Wood. Pd (VA): disturbed areas; rare, native of w. North America. [= C, FNA, K, Z; > *E. trichodes* var. *trichodes* - F, HC]

* *Eragrostis unioides* (Retzius) Nees ex Steudel, Chinese Lovegrass. Cp (FL, GA): disturbed areas; rare, native of Asia. Reported for s. GA (Jones & Coile 1988, FNA, GW, HC). [= FNA, GW, HC, K, S, Z]

* *Eragrostis atrovirens* (Desvaux) Trinius ex Steudel, Thalia Lovegrass. Cp (AL, FL, LA, MS): disturbed areas; rare, native of Africa. [= FNA, K] {add to key; add to synonymy}

* *Eragrostis elongata* (Willdenow) Jacquin f., Long Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, native of se. Asia and Australia. [= FNA, K] {not yet keyed}

- * *Eragrostis leptostachya* (R. Brown) Steudel, Australian Lovegrass, is reported for NC (Kartesz 1999). {investigate} [= FNA, K] {not yet keyed}
- * *Eragrostis plana* Nees, South African Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, native of South Africa. [= FNA, K] {not yet keyed}
- * *Eragrostis setifolia* Nees, Neverfail. Cp (SC): waste areas near wool-combing mills; rare, native of Australia. [= FNA, K] {not yet keyed}
- * *Eragrostis tef* (Zuccagni) Trotter, Teff. Cp (SC): waste areas near wool-combing mills; rare, native of Africa. This is the grain used in making Ethiopian bread. [= FNA, HC, K] {not yet keyed}

***Eremochloa* Büse 1852 (Centipede Grass)**

A genus of about 11 species, native of Asia and Australia. References: Thieret in FNA (2003a).

Identification notes: In the autumn, the inflorescences make this grass readily recognizable at a distance: a short, tight lawn grass with a reddish aspect.

- * *Eremochloa ophiuroides* (Munro) Hackel, Centipede Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): lawns, roadsides, sometimes weedy in more natural sites; common (rare in VA), native of se. Asia. Now very commonly planted as a lawn and roadside grass in the Coastal Plain from se. NC southward. Stalter & Lamont (1996) report the VA occurrence of this species. [= RAB, FNA, HC, K]

***Eriochloa* Kunth 1816 (Cup Grass)**

A genus of 320-30 species, of the tropical, subtropical, and warm temperate Old World and New World. References: Crins (1991)=Z; Shaw, Webster, & Bern in FNA (2003a); Shaw & Webster (1987)=Y.

- 1 Lemma of fertile floret with an awn >0.2 mm long; second glume awned; panicle compact, the raceme-like lateral branches close together and ascending-appressed, of irregular lengths; spikelets 8-16 on a typical, primary branch.....*E. contracta*
- 1 Lemma of fertile floret lacking an awn; second glume not awned; panicle open, the raceme-like lateral branches remote and divergent, the lowermost longest, the upper gradually reduced in length to the apex (*E. acuminata* var. *acuminata*, *E. michauxii* var. *michauxii*) or the panicle compact (*E. villosa*); spikelets 12-40 on a typical, primary branch.
- 2 Spikelets 2.0-2.5 mm wide*E. villosa*
- 2 Spikelets 1.1-1.8 mm wide.
- 3 Annual, 3-12 dm tall; spikelets 1.1-1.4 mm wide*E. acuminata* var. *acuminata*
- 3 Perennial, 5-25 dm tall; spikelets 1.3-1.8 mm wide*E. michauxii* var. *michauxii*

- * *Eriochloa acuminata* (J. Presl) Kunth var. *acuminata*. Cp (GA, SC), Pd (GA): disturbed areas, waste areas near wool-combing mills; rare, presumably native of further south. Reported for scattered locations in GA (Jones & Coile 1988, as *E. gracilis*). Reported for NC (Kartesz 1999), but the specimen basis is of cultivated material. [= FNA, K, Y, Z; < *E. acuminata* – C; = *E. gracilis* (Fournier) A.S. Hitchcock var. *gracilis* – HC]

- * *Eriochloa contracta* A.S. Hitchcock, Prairie Cupgrass. Pd, Mt (VA), Cp (SC): disturbed areas, waste areas around wool-combing mills; rare, native of midwestern United States. [= C, F, FNA, G, GW, HC, K, Y, Z]

Eriochloa michauxii (Poir.) A.S. Hitchcock var. *michauxii*, Longleaf Cupgrass. Cp (FL, GA, SC): coastal freshwater and slightly brackish marshes, flatwoods, disturbed areas; rare (GA Special Concern). Se. SC south to FL, west to AL, or possibly LA. Var. *simpsonii* A.S. Hitchcock is endemic to sw. FL. [= FNA, HC, K, Y, Z; < *E. michauxii* – GW, S]

- * *Eriochloa villosa* (Thunberg) Kunth, Chinese Cupgrass. Mt (VA): disturbed area (open edge of railroad bed); rare, native of e. Asia. See Belden et al. (2004) for additional information about the first occurrence in Virginia. [= C, FNA, HC, K, Y]

Eriochloa punctata (Linnaeus) Desvaux ex Hamilton, Louisiana Cupgrass. Cp (GA): marshes, creek banks; rare. MS west to TX, and south into the New World Tropics; reported for e. GA (FNA). [= FNA, HC, K] {not yet keyed; synonymy incomplete}

***Eustachys* Desvaux 1810 (Finger-grass)**

A genus of ca. 12 species, of tropical and warm temperate regions. References: Aulbach in FNA (2003a). McKenzie, Urbatsch, & Aulbach-Smith (1987)=Z. Key based on Z.

- 1 Lateral nerves of the fertile lemma glabrous; culms stout, 7-15 dm tall; spikes 8-16 (-20), 7-12 cm long.....*E. glauca*
- 1 Lateral nerves of the fertile lemma pubescent; culms slender, 3-10 dm tall; spikes 1-20, 2.5-9 cm long.
- 2 Keel of the fertile lemma appressed brownish-ciliate; spikes 1-6; [native].
- 3 Spikes 5-10 cm long; spikelets >3 mm long.....*E. floridana*
- 3 Spikes 2.5-6 cm long; spikelets <2.5 mm long.....*E. petraea*
- 2 Keel of the fertile lemma glabrous; spikes 7-20; [aliens, in disturbed situations].
- 4 Spikelets >2.4 mm long; sterile floret oblanceolate, acute.....*E. distichophylla*
- 4 Spikelets <2.1 mm long; sterile floret widely cuneate, truncate*E. retusa*

* *Eustachys distichophylla* (Lagasca y Segura) Nees, Weeping Finger-grass. Cp (GA): disturbed areas; rare, native of South America. In GA and FL (Kartesz 1999). [= FNA, K, Z; = *Chloris distichophylla* Lagasca y Segura – HC]

Eustachys floridana Chapman, Florida Finger-grass. Cp (FL, GA): sandhills, pine flatwoods; rare (GA Special Concern). E. GA south to c. peninsular FL, west to w. Panhandle FL and s. AL. [= FNA, K, Z; = *Chloris floridana* (Chapman) Wood – HC, S] {synonymy}

Eustachys glauca Chapman, Saltmarsh Finger-grass. Cp (FL, GA, NC, SC): marshes and marsh edges; rare. June-October. Se. NC south to FL and west to s. AL. [= FNA, K, Z; = *Chloris glauca* (Chapman) Wood – RAB, GW, HC, S]

Eustachys petraea (Swartz) Desvaux, Dune Finger-grass. Cp (FL, GA, NC, SC): dune slacks and sand flats, sometimes in disturbed areas; common (uncommon north of GA). (May-) June-October. NC (Dare County) south to FL and west to TX. [= FNA, K, Z; = *Chloris petraea* Swartz – RAB, GW, HC, S]

* *Eustachys retusa* (Lagasca y Segura) Kunth, Argentine Finger-grass. Cp (FL, GA, SC): sandy fields; rare, native of Argentina. June. [= FNA, K, Z; ? *Chloris argentina* (Hackel) Lillo & Parodi – RAB, G, HC]

* *Eustachys caribaea* (Sprengel) Herter, Chickenfoot Grass. Cp (GA): disturbed areas; rare, native of South America. [= FNA, K; = *Chloris capensis* – HC, misapplied] {add to synonymy; not yet keyed}

Eustachys neglecta (Nash) Nash. Native. Cp (FL): pinelands, sandy fields; uncommon. N. and peninsular FL, se. AL, and e. TX. [= FNA, K; = *Chloris neglecta* Nash – HC, S] {synonymy incomplete; not yet keyed}

Festuca Linnaeus 1753 (Fescue)

A genus of about 500 species, nearly cosmopolitan in temperate regions. References: Darbyshire & Pavlick in FNA (2007a); Darbyshire (1993)=X; Aiken & Darbyshire (1990)=Y; Tucker (1996)=Z; Soreng & Terrell (1998). Key based in part on C and Y. [also see *Vulpia*]

- 1 Leaves 0.2-3 mm wide, often involute.
 - 2 Plant loosely tufted, often rhizomatous; basal sheaths disintegrating into fibers; spikelets 6-13 mm long..... *F. rubra*
 - 2 Plant tufted, lacking rhizomes; basal sheaths persistent, remaining firm and entire; spikelets 3-9 mm long.
 - 3 Lemmas 2.3-4.0 (-4.4) mm long, awnless, or with a minute projection to 0.4 mm long; anther 1.5-2.2 (-2.5) mm long; spikelets 3.0-6.0 (-6.5) mm long..... *F. filiformis*
 - 3 Lemmas 3.8-5.5 mm long, with an awn 0.5-2.5 mm long; anther (2.3-) 2.5-3.0 mm long; spikelets 5.5-9.0 mm long *F. trachyphylla*
- 1 Leaves 3-12 mm wide, flat.
 - 4 Larger lemmas 5.5-10 mm long; leaf blades auriculate at the base; anthers 2-4 mm long [see *Schedonorus*]
 - 4 Larger lemmas 3.3-5.2 mm long; leaf blades not auriculate at the base; anthers 0.8-1.5 mm long; [subgenus *Subulatae*, section *Obtusae*].
 - 5 Ligules 2-9 mm long; [rare introduction] *F. thurberi*
 - 5 Ligules 0.1-1.5 (-2) mm long; [common natives].
 - 6 Principal lowermost panicle branches with 8-20 spikelets clustered at the end; spikelets broadly ovate, 4-6 mm wide *F. paradoxa*
 - 6 Principal lowermost panicle branches with 2-7 spikelets scattered along the outer half; spikelets narrowly ovate, 2-4 mm wide *F. subverticillata*

* *Festuca filiformis* Pourret, Hair Fescue, Fineleaf Sheep Fescue. Mt, Pd (NC, VA): lawns, disturbed areas; rare, native of Eurasia. May-June. [= C, FNA, K, Y, Z; ? *F. capillata* Lamarck – RAB, F, HC; ? *F. ovina* Linnaeus var. *capillata* (Lamarck) Alefeld – G; ? *F. tenuifolia* Sibthorp – W]

Festuca paradoxa Desvaux, Cluster Fescue. Cp, Pd, Mt (GA, NC, SC, VA): bottomlands, uplands over mafic rock; common (rare in VA Mountains and Piedmont). May-July. PA west to WI and IA, south to SC, c. GA, and e. TX. [= RAB, C, F, FNA, G, GW, HC, K, W, Z; ? *F. shortii* Kunth ex Wood – S, misapplied]

Festuca rubra Linnaeus ssp. *rubra*, Linnaeus, Red Fescue. Mt (NC, SC, VA), Pd, Cp (GA, NC, VA): roadsides, fields, disturbed areas, pastures, grassy balds; common. May-July. In our area, this species is considered to be partly native and partly introduced. This species is circumboreal, extending south in North America to GA and MO. Many varieties or subspecies have been described in the *F. rubra* complex. [= FNA, K; < RAB, C, G, HC, S, WV, Y, Z; > *F. rubra* var. *rubra* – F; > *F. rubra* var. *commutata* Gaudin – F]

Festuca subverticillata (Persoon) Alexeev, Nodding Fescue. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist to wet forests, woodlands, and disturbed areas; common. May-June. ME, Québec, and Manitoba south to FL and e. TX. [= C, FNA, K, Y, Z; ? *F. obtusa* Biehler – RAB, F, G, GW, HC, S, W, WV]

* *Festuca trachyphylla* (Hackel) Krajina, Hard Fescue. Pd (GA, NC, VA), Mt (NC, VA), Cp (NC, SC, VA): meadows, pastures, disturbed areas; uncommon, native of Eurasia. May-June. The nomenclatural debate about the application of the name *F. trachyphylla* is summarized in Darbyshire & Pavlick (1997). [= C, K, Y, Z; < *F. ovina* – RAB, S, W, WV, in the broad sense (misapplied as to our material); < *F. ovina* var. *ovina* – F, G, HC; < *F. ovina* var. *duriuscula* (Linnaeus) W.D.J. Kock – F, G, HC, misapplied as to our material]

* *Festuca thurberi* Vasey. Cp (SC): disturbed areas; rare, introduced, native of sw. United States (NM, CO, WY, and UT). [= FNA, K] {not keyed; investigate}

Festuca versuta Beal, Texas Fescue. Native, east to TN according to K, but not considered to be distributed east of the Mississippi River by FNA. [= K] {not keyed; investigate}

Gastridium Palisot de Beauvois 1812 (Nitgrass)

A genus of 2 species, annuals, of s. Europe, n. Africa, and w. Asia. References: Wipff in FNA (2007a).

* *Gastridium phleoides* (Nees & Meyen) C.E. Hubbard, Nitgrass. Cp (SC): disturbed areas; rare, native of sw. Asia. [= FNA, K] {synonymy incomplete}

Gaudinia Palisot de Beauvois 1812

A genus of about 4 species, annuals or perennials, native of the Mediterranean region. References: Daniel in FNA (2007a).

* *Gaudinia fragilis* (Linnaeus) Palisot de Beauvois, Oatgrass. Ballast, reported from Mobile, AL. [= FNA, K; = *Avena fragilis* Linnaeus]

Glyceria R. Brown 1810 (Mannagrass)

A genus of about 40 species, nearly cosmopolitan. References: Barkworth & Anderton in FNA (2007a); Tucker (1996)=Z. [also see *Torreyochloa*]

- 1 Spikelets 10-40 mm long, linear, subterete, 5-15× as long as wide, terete or nearly so in cross-section; [section *Glyceria*].
 - 2 Lemma (6-) 7-8.5 (-10) mm long, acute to acuminate; palea longer than the lemma, extending 1.5-3 mm beyond the lemma apex *G. acutiflora*
 - 2 Lemma 2.4-6.0 mm long, obtuse to notched; palea about as long as the lemma (ranging from shorter than the lemma and included, to projecting up to 1.5 mm beyond the lemma apex).
 - 3 Lemma (3.5-) 4.0-6.0 mm long, the apex with 1-2 strongly developed lobes, and also often toothed between the lobes; leaf blades 2-12 cm long; primary panicle branches 1.5-9.5 cm long..... *G. declinata*
 - 3 Lemma 2.4-4.8 mm long, the apex rounded or with a few poorly developed rounded teeth; leaf blades 18-32 cm long; primary panicle branches 3-17 cm long.
 - 4 Culms 2.5-8 dm tall; pedicels 1-6 mm long [*G. notata*]
 - 4 Culms 7-18 dm tall; pedicels 0.7-1.7 mm long.
 - 5 Lemmas hispidulous on the veins, the hairs ca. 0.1 mm long *G. arkansana*
 - 5 Lemmas scabrous on the veins, the prickles ca. 0.05 mm long *G. septentrionalis*
 - 1 Spikelets 2.5-8 mm long, ovate to oblong, 1.5-3× as long as wide, laterally compressed in cross-section.
 - 5 Upper glumes 2.5-5 mm long, longer than wide; [of w. VA and possibly NC northward]; [section *Hydropoa*]..... *G. grandis* var. *grandis*
 - 5 Upper glumes 0.6-3.7 mm long, if > 3 mm long, then shorter than wide; [collectively widespread]; [section *Striatae*].
 - 6 Inflorescence compact (at maturity), the branches stiffly ascending to appressed, the tips never nodding; ligule < 1 mm long.
 - 7 Inflorescence branches elongate, appressed; lower internodes of the inflorescence 2-8 cm long; spikelets with 3-4 flowers, 3.5-4 mm long; lemma 1.9-2.8 mm long; leaves 2-5 mm wide; [of the Mountains, rarely elsewhere]..... *G. melicaria*
 - 7 Inflorescence branches short, stiffly ascending; lower internodes of the inflorescence 0.8-2.0 (-2.5) cm long; spikelets with 4-7 flowers, 4-8 mm long; lemma 3.0-3.7 mm long; leaves 3-10 mm wide; [of the Coastal Plain, rarely disjunct inland to the Mountains of VA] *G. obtusa*
 - 6 Inflorescence lax and diffuse (at maturity), the branches spreading to somewhat ascending, the tips often nodding or drooping; ligule 1-6 mm long.
 - 8 Glumes tapering from below midlength to the narrowly acute (< 45 degree) tips; lemmas > 2× as long as wide; [endemic to seepage at high elevations in the Great Smoky Mountains, NC and TN and nearby] *G. nubigena*
 - 8 Glumes narrowing from midlength or above to the acute or rounded (> 45 degree) tips; lemmas < 2× as long as wide; [collectively widespread].
 - 9 Lemma 1.4-2.1 mm long, the veins prominently raised.
 - 10 Leaf blades 6-15 mm wide; anthers 0.5-0.8 mm long; culms 2.5-8 mm thick; [rare introduction] *G. elata*
 - 10 Leaf blades 2-6 mm wide; anthers 0.2-0.6 mm long; culms 1.5-3.5 mm thick; [common] *G. striata* var. *striata*
 - 9 Lemma 1.8-4.0 mm long, the veins visible, but not raised; ligule 2-6 mm long.
 - 11 Lemma 2.4-4.0 mm long, projecting conspicuously beyond the palea; spikelets 5-8 mm long, with (4-) 5-10 flowers *G. canadensis*
 - 11 Lemma 1.8-2.5 mm long, more-or-less equal to the palea; spikelets 3-5 mm long, with 2-5 (-6) flowers..... *G. laxa*

Glyceria acutiflora Torrey. Mt (GA, VA): shallow water and wet mucky soils in mountain ponds, wet pastures; uncommon (rare in GA). June-July. ME west to MI, south to DE, VA, nw. GA (Jones & Coile 1988), e. TN, and MO; also in e. Asia. [= C, F, FNA, G, GW, HC, K, W, WV, Z; = *Panicularia acutiflora* (Torrey) Kuntze – S]

Glyceria canadensis (Michaux) Trinius, Rattlesnake Mannagrass. Mt (NC, VA), Cp (VA): bogs, seepages, and wet meadows; rare. June-July. Newfoundland west to MN, south to NJ, VA, nw. NC, and IL. [= C, F, G, K, WV, Z; = *G. canadensis* var. *canadensis* – FNA, HC, W]

* *Glyceria declinata* de Brébisson. Cp, Pd (SC): disturbed moist areas; rare, native of Europe. [= FNA] {check for additional synonymy}

* *Glyceria elata* (Nash) M.E. Jones. Pd (GA): {habitat unknown}; rare, native of w. North America. Reported for GA by FNA; presumably a chance introduction. [= FNA] {add synonymy}

Glyceria grandis S. Watson var. *grandis*, American Mannagrass. Mt (NC?, VA), Cp (VA): wet, mucky soils of open wetlands; rare. Nova Scotia west to AK, south to VA, IA, NM, and OR. Attributed to w. NC by Tucker (1996). [= FNA, K; < *G. grandis* – C, F, G, GW, HC, WV, Z; = *Panicularia grandis* (S. Watson) Nash – S; ? *G. maxima* (Hartman) Holmberg ssp. *grandis* (S. Watson) Hultén]

Glyceria laxa (Scribner) Scribner, Lax Mannagrass. Mt (NC, VA): bogs; rare. June-July. Prince Edward Island south to NC, mostly Appalachian. Though often described as a hybrid of *G. canadensis* and either *G. striata* var. *striata* and/or *G.*

grandis var. *grandis*, *G. laxa* ranges south of the distribution of both *G. canadensis* and *G. grandis* var. *grandis*. It is best considered as a species, perhaps of hybrid origin. [= F, G, K, WV; = *G. canadensis* (Michaux) Trinius var. *laxa* (Scribner) A.S. Hitchcock – RAB, FNA, HC; = *G. ×laxa* – C; < *G. canadensis* – GW]

Glyceria melicaria (Michaux) F.T. Hubbard, Northeastern Mannagrass. Mt (GA, NC, VA), Pd (NC): mountain swamp forests and seepages; common (uncommon in NC, rare in GA). June-August. Nova Scotia west to Québec, south to n. GA (Jones & Coile 1988) and KY. [= RAB, C, F, FNA, G, GW, HC, K, W, WV, Z; = *Panicularia melicaria* (Michaux) A.S. Hitchcock – S]

Glyceria nubigena W.A. Anderson, Smoky Mountain Mannagrass. Mt (NC, TN): moderate to high elevation seepages in the Great Smoky Mountains, sometimes in areas appearing dry (such as heath balds), nearly endemic to Great Smoky Mountains National Park; rare. June-July. Endemic to the Great Smoky Mountains of w. NC and e. TN. *G. nubigena* has nearly the same range as *Rugelia nudicaulis*, but is more restricted to seepage. The distinctions and relationship between this taxon and *G. grandis* need further investigation. [= RAB, FNA, HC, K, W, Z]

Glyceria obtusa (Muhlenberg) Trinius, Coastal Mannagrass. Cp (NC, SC, VA), Mt (VA): blackwater swamp forests, wet meadows, freshwater marshes; uncommon. June-September. Nova Scotia south to SC, on or near the Coastal Plain; disjunct to w. VA in Shenandoah Valley sinkhole ponds. [= RAB, C, F, FNA, G, GW, HC, K, W, Z; = *Panicularia obtusa* (Muhlenberg) Kuntze – S]

Glyceria septentrionalis A.S. Hitchcock, Floating Mannagrass, Eastern Mannagrass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, VA): shallow water, wet mucky soils, floodplain sloughs, cypress ponds; uncommon (rare in GA). May-June. MA west to MN, south to SC, ne. GA, and TX. [= RAB, F, GW, HC, K, W, WV, Z; < *G. septentrionalis* – C, G (also see *G. arkansana*); = *G. septentrionalis* var. *septentrionalis* – FNA; = *Panicularia septentrionalis* (A.S. Hitchcock) Bicknell – S]

Glyceria striata (Lamarck) A.S. Hitchcock var. *striata*, Fowl Mannagrass. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): wet meadows, seepages, bogs, marshes, swamp forests; common. April-June. Newfoundland west to British Columbia, south to FL and CA. Var. *stricta* (Scribner) Fernald is more northern. [= C, F, G, HC, Z; < *G. striata* – RAB, FNA, GW, K, W, WV; = *Panicularia striata* (Lamarck) A.S. Hitchcock – S; = *G. striata* ssp. *striata*]

Glyceria arkansana Fernald, Arkansas Mannagrass. Swamps. IL south to LA and AR; disjunct in w. NY. The VA report is in error. The appropriate treatment of this taxon needs further investigation. [= F, HC, K, Z; < *G. septentrionalis* – C, G; = *G. septentrionalis* A.S. Hitchcock var. *arkansana* (Fernald) Steyermark & Kučera – FNA]

* *Glyceria notata* Chevallier, Marked Mannagrass. Reported for TN (FNA). [= FNA] {add synonymy}

Gymnopogon Palisot de Beauvois 1812 (Beard Grass, Skeleton Grass)

A genus of about 15 species, in temperate and tropical areas of the Americas. References: Smith in FNA (2007b); Smith (1971)=Z.

Identification notes: When sterile, *Gymnopogon* is sometimes confused with *Dichanthelium*. *Gymnopogon* differs in having the sheaths conspicuously overlapping (vs. not overlapping in *Dichanthelium*) and leaves that are definitely cordate-clasping and of stiff texture (only a few *Dichanthelium* have this combination).

- | | | |
|---|--|-------------------------------|
| 1 | Awn of the lemma 4.5-12 mm long; inflorescence branches with spikelets distributed from the tip nearly to the base; leaves 5-15 mm wide; [of the Coastal Plain, Piedmont, and Mountains] | <i>G. ambiguus</i> |
| 1 | Awn of the lemma 0.8-1.6 (-3.5) mm long; inflorescence branches with spikelets distributed from the tip nearly to the base (<i>G. chapmanianus</i>) or to roughly the midpoint, the basal portion naked (or some branches rarely with a few spikelets) (<i>G. brevifolius</i>); leaves 2-8 mm wide; [of the Coastal Plain and lower Piedmont]. | |
| 2 | Spikelets 1-flowered; first glume 2.3-3.7 mm long..... | <i>G. brevifolius</i> |
| 2 | Spikelets 2-4-flowered; first glume 3.8-5 mm long | <i>G. chapmanianus</i> |

Gymnopogon ambiguus (Michaux) Britton, Sterns, & Poggenburg, Eastern Beard Grass. Cp (FL, GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (KY, NC, SC, VA); Ip (KY): prairies, glades, barrens, dry pinelands and woodlands, dry fields; common (rare in Mountains, rare in KY). August-October. S. NJ west to KY, OH, and MO, south to FL and TX. [= RAB, C, F, FNA, G, HC, K, S, W, Z]

Gymnopogon brevifolius Trinius, Pineland Beard Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA), Ip (KY): pine savannas, sandhills, dry woodlands, prairies, calcareous glades; common (rare in KY Interior low Plateau, rare in VA Coastal Plain, rare in lower Piedmont of GA, NC, SC, VA). August-October. S. NJ south to FL, west to LA and AR; disjunct in the Highland Rim of KY and TN. [= RAB, C, F, FNA, G, HC, K, S, Z]

Gymnopogon chapmanianus A.S. Hitchcock, Chapman's Beard Grass. Cp (FL, GA): sandhills and other xeric, sandy habitats; rare (rare in GA). Se. GA south to FL. [= FNA, HC, K, S; > *G. chapmanianus* – Z; *G. floridanus* Swallen – Z]

Hackelochloa Kuntze 1891 (Pitscale Grass)

* ***Hackelochloa granularis*** (Linnaeus) Kuntze, Pitscale Grass. Cp (GA): disturbed areas; rare, native of the Old World. Reported for sw. GA and other Gulf Coast states (Thieret in FNA 2003a, Jones & Coile 1988, Kartesz 1999). [= FNA, HC, K; = *Ryttilix granularis* (Linnaeus) Skeels – S; = *Mnesithea granularis* (Linnaeus) Koning & Sosef]

Hainardia W. Greuter 1967 (Thintail)

A genus of 1 species, an annual, native of Europe. References: Smith in FNA (2007a); Tucker (1996)=Z.

* **Hainardia cylindrica** (Willdenow) W. Greuter, Thintail. Cp (SC): waste areas around wool-combing mills; rare, native of the Old World. April-June. [= FNA, K, Z; = *Lepturus cylindricus* (Willdenow) Trinius – RAB; = *Monerma cylindrica* (Willdenow) Cosson & Durieu – HC]

Heteropogon Persoon 1806 (Tanglehead)

A genus of about 10 species, pantropical and extending into subtropical and warm temperate areas. References: Barkworth in FNA (2003a).

* **Heteropogon melanocarpus** (Elliott) Elliott ex Bentham, Sweet Tanglehead. Cp (FL, GA, NC, SC): sandy roadsides, disturbed areas; rare, probably naturalized from further south (or even from the Old World). September-October. The species is widespread in the Old World and New World tropics, north in North America to se. NC. [= RAB, FNA, HC, K, S]

Holcus Linnaeus 1753 (Velvet Grass, Soft Grass)

A genus of 8 species, usually perennial, native of Europe, n. Africa, and w. Asia. References: Standley in FNA (2007a); Tucker (1996)=Z.

1 Plant not rhizomatous; upper culm internodes velvety-villous; lemma awn 1-2 mm long, recurved as a hook **H. lanatus**
1 Plant strongly rhizomatous; upper culm internodes glabrous; lemma awn 3-5 mm long, straight or geniculate **H. mollis** ssp. **mollis**

* **Holcus lanatus** Linnaeus, Velvet Grass, Soft Grass, Yorkshire-fog. Mt (Ga, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (NC, SC, VA): pastures, disturbed areas, roadsides, hedge-rows; common (rare in SC), native of Europe. May-October. [= RAB, C, F, FNA, G, HC, K, W, WV, Z; = *Notholcus lanatus* (Linnaeus) Nash – S]

* **Holcus mollis** Linnaeus ssp. **mollis**, Creeping Soft Grass. Mt (NC): lawns; rare, native of Europe. September. This European species is known from scattered sites in e. North America. The species was documented for our area by Clay (1995). [= FNA; < *H. mollis* – C, F, G, HC, K, Z]

Hordeum Linnaeus 1753 (Barley)

A genus of about 40 species, north temperate and in South America. Many recent authors place most of our species (other than *H. vulgare*) in *Critesion* Rafinesque. References: von Bothmer, Baden, & Jacobsen in FNA (2007a); Tucker (1996)=Z; Petersen & Seberg (2003); Blattner (2004).

1 Rachis remaining intact at maturity; leaves 5-12 mm wide, with well-developed auricles; [section *Hordeum*] **H. vulgare**
1 Rachis disarticulating at maturity; leaves 1-5 mm wide, not auriculate (except in *H. murinum* ssp. *leporinum*).
2 Perennial; glumes 25-150 mm long; [intersectional hybrid derivative of section *Sibirica* and section *Critesion*] **H. jubatum** ssp. **jubatum**
2 Annual; glumes 7-22 (-28) mm long.
3 Leaves auriculate; glumes of the central spikelet (in the triad) with ciliate margins; [section *Hordeum*] **H. murinum** ssp. **leporinum**
3 Leaves not auriculate; glumes of the central spikelet (in the triad) with scabrous margins; [section *Critesion*] **H. pusillum**

* **Hordeum jubatum** Linnaeus ssp. **jubatum**, Foxtail Barley, Squirreltail Barley. Mt, Pd (VA), Cp (NC, SC, VA): disturbed areas; rare, apparently introduced in our area, native of w. United States. May-August. A tetraploid taxon. [= FNA, K; < *H. jubatum* – RAB, C, F, G, HC, W, WV, Z; = *Critesion jubatum* (Linnaeus) Nevski]

* **Hordeum murinum** Linnaeus ssp. **leporinum** (Link) Arcangeli. Pd (GA, NC, VA), Cp (SC, VA): disturbed areas; rare, native of Mediterranean Europe. May. A tetraploid taxon. [= FNA, K, Z; = *H. leporinum* Link – RAB, C, HC; < *Hordeum murinum* Linnaeus – G, S; = *Critesion murinum* (Linnaeus) Á. Löve ssp. *leporinum* (Link) Á. Löve]

Hordeum pusillum Nuttall, Little Barley. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides, ditches, disturbed areas; common (rare in VA Mountains). April-June. Se. NY west to MN, south to n. FL, s. TX, and s. AZ. A diploid taxon. [= RAB, C, F, FNA, G, HC, K, S, W, Z; = *Critesion pusillum* (Nuttall) Á. Löve]

* **Hordeum vulgare** Linnaeus, Barley. Cp (FL, NC, SC, VA), Pd (NC, SC, VA), Mt (VA): cultivated fields, occasionally persistent as a waif; commonly cultivated, rare as a waif, native of Eurasia. May-June. A diploid taxon. The original wild form is often treated as *H. vulgare* ssp. *spontaneum* and the cultivated, non-shattering derivative as ssp. *vulgare* (Hancock 2004). The wild form was used as a food source since at least 19,000 years ago, and ssp. *vulgare* developed by 8500 years ago. [= RAB, C, F, K, Z; > *H. aegiceras* Nees ex Royle – G; > *H. vulgare* var. *vulgare* – G, HC; > *H. vulgare* var. *trifurcatum* (Schlechtendahl) Alefeld – G, HC; > *H. vulgare* ssp. *vulgare* – FNA; > *H. vulgare* ssp. *spontaneum* (K. Koch) Thellung]

*? **Hordeum brachyantherum** Nevski ssp. **brachyantherum** is reported for se. PA (Rhoads & Klein 1993) and also is apparently known from specimens from GA (Sorrie, pers. comm.). A tetraploid taxon. [= FNA, K; ? *Critesion brachyantherum* (Nevski) Barkworth & D.R. Dewey] {not yet keyed}

* *Hordeum depressum* (Scribner & J.G. Smith) Rydberg, Low Barley. Cp (SC): waste areas around wool-combing mills; rare, native of w. North America. A tetraploid taxon. [= FNA, HC, K; = *Critesion depressum* (Scribner & J.G. Smith) Á. Löve] {not yet keyed}

***Imperata* Cirillo 1792 (Cogongrass, Satintail)**

A genus of about 8-9 species, of tropical, subtropical, and warm temperate areas of both hemispheres. References: Gabel in FNA (2003a); Ward (2004c)=Z; Hall (1998)=Y.

* *Imperata cylindrica* (Linnaeus) Palisot de Beauvois, Cogongrass, Brazilian Satintail. Cp (FL, GA, SC): grassy roadside; common (rare north of FL), introduced from the tropics. See Nelson (1993) for first report from SC. An extremely aggressive and dangerous weed, now well-established and rapidly invading fire-maintained Coastal Plain areas (such as longleaf pine and slash pine flatwoods and longleaf pine clayhills) on the Gulf Coastal Plain of FL, AL, and MS. Hall (1998) argues that *I. cylindrica* and *I. brasiliensis* are not distinct. The only character considered to separate them is that *I. brasiliensis* has 1 anther and *I. cylindrica* has 2. Ward (2004c) treats the 2 taxa at varietal level. Both putative taxa are present in the Gulf Coast area of FL, GA, AL, and LA. [= Y; > *I. cylindrica* – FNA, HC, K; > *I. brasiliensis* Trinius – FNA, HC, K, S; > *I. cylindrica* var. *cylindrica* – Z; > *I. cylindrica* var. *mexicana* (Ruprecht) D.B. Ward – Z]

***Koeleria* Persoon 1805 (Junegrass, Koeleria)**
[also see *Rostraria*]

A genus of about 60 species, north and south temperate. References: Standley in FNA (2007a)

Koeleria macrantha (Ledebour) J.A. Schultes, Junegrass. South to DE, MD, PA, KY, AL, LA, TX, and Mexico. [= FNA, K; < *K. pyramidata* (Lamarck) Palisot de Beauvois – C]

***Lachnagrostis* Trinius 1820**

A genus of about 20 species, annuals and perennials, of the Southern Hemisphere. References: Harvey in FNA (2007a); Sorong et al. (2003).

* *Lachnagrostis filiformis* (G. Forst.) Trinius, Pacific Bentgrass. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of Australia. [= FNA; = *Agrostis avenacea* J.F. Gmelin – K]

***Lagurus* Linnaeus 1753 (Hare's-tail Grass)**

A monotypic genus, an annual, of the Mediterranean region. References: Tucker in FNA (2007a); Tucker (1996)=Z.

* *Lagurus ovatus* Linnaeus, Hare's-tail Grass. Cp (FL, NC): on ballast, other disturbed areas; rare, native of Mediterranean Europe. April-June. [= RAB, FNA, HC, K, Z]

***Leersia* Swartz 1788 (Cutgrass)**

A genus of about 17-18 species, tropical and warm temperate. References: Pyrah in FNA (2007a); Tucker (1988)=Z.

- 1 Lower panicle branches whorled or closely approximate; spikelets 4.0-5.5 mm long, 1.5-2.0 mm broad; stamens 3 *L. oryzoides*
- 1 Lower panicle branches alternate (rarely opposite); spikelets 2.2-5.0 mm long, 0.8-4.0 mm broad; stamens 2 or 6.
- 2 Spikelets suborbicular-falcate, 3.0-4.0 mm broad, < 2× as long as broad; principal leaf-blades 10-15 mm wide; stamens 2 *L. lenticularis*
- 2 Spikelets narrowly elliptic-falcate, 1.0-2.0 mm broad, > 2× as long as wide; principal leaf-blades usually < 7 mm wide; stamens 2 or 6.
- 3 Spikelets 3.8-4.7 mm long, 1.5-2.0 mm broad; panicle branches short, bearing spikelets nearly to their bases; stamens 6 *L. hexandra*
- 3 Spikelets 2.2-3.5 mm long, 0.8-1.2 mm broad; panicle branches long, filiform, the longer ones bearing spikelets only in their upper half; stamens 2 *L. virginica*

Leersia hexandra Swartz, Southern Cutgrass. Cp (FL, GA, NC, SC, VA): clay-based Carolina bays, limesink ponds, lakes, pools, usually in places where periodically or seasonally inundated; uncommon (rare in VA). June-August. Pantropical, ranging north in North America to MD, TN, and TX. This species is considered a serious weed in the Old World and New World tropics; in our area, however, it is uncommon and not weedy. [= RAB, C, F, FNA, G, GW, HC, K, Z; = *Homalocenchrus hexandrus* (Swartz) Kuntze – S]

Leersia lenticularis Michaux, Catchfly Cutgrass. Cp (FL, GA, NC, SC, VA): floodplain forests and swamps; uncommon. September-October. Se. VA south to n. FL, west to e. TX, north in the interior to IN and MN. [= RAB, C, F, FNA, G, GW, HC, K, Z; = *Homalocenchrus lenticularis* (Michaux) Kuntze – S]

Leersia oryzoides (Linnaeus) Swartz, Rice Cutgrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): marshes, riverbanks, pond-shores; common. August-October. Nova Scotia west to British Columbia, south to FL and CA; also in Europe and e. Asia. [= RAB, C, F, FNA, G, GW, HC, K, WV, Z; = *Homalocenchrus oryzoides* (Linnaeus) Pollich – S]

Leersia virginica Willdenow, White Grass, White Cutgrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): floodplain forests, swamps, streambanks; common. August-October. Québec west to MN and SD, south to FL and TX. [= RAB, C, FNA, G, GW, HC, K, WV, Z; > *L. virginica* var. *virginica* – F; > *L. virginica* var. *ovata* (Poiret) Fernald – F; = *Homalocenchrus virginicus* (Willdenow) Britton – S]

Leptochloa Palisot de Beauvois 1812 (Sprangletop, Feathergrass)

A genus of about 30 species, pantropical and extending into warm temperate areas. The circumscription of *Leptochloa* has been controversial; many earlier authors have preferred to separate *Diplachne* as a separate genus. References: Snow in FNA (2003a); Snow (1998); Cronquist (1991).

- 1 Spikelets 1-2.5 mm long, with 2-4 flowers; sheaths sparsely pilose with long, pustular-based hairs *L. panicea* ssp. *brachiata*
- 1 Spikelets 3.5-10 mm long, with 5-12 flowers; sheaths glabrous (rarely slightly scabrous).
 - 2 Lemmas 2-3 mm long, the apex obtuse to truncate, with the midrib often extended as a mucro *L. uninervia*
 - 2 Lemmas 3-5 mm long, the apex acuminate or awned.
 - 3 Lemmas acuminate; leaf blades 5-10 mm wide *L. panicoides*
 - 3 Lemmas awned; leaf blades 1-3 mm wide.
 - 4 Low sprawling grasses, < 5 dm tall; lemma awns (1-) 2.5-5 mm long; first glume 2.5-3.5 mm long; second glume 4-7 mm long *L. fascicularis* var. *maritima*
 - 4 Taller grasses, usually 5-10 dm tall; lemma awns 0.5-2.5 mm long; first glume 1.3-3.4 mm long; second glume 2.2-5 mm long.
 - 5 First glume 2.3-3.4 mm long; second glume 3.4-5.0; lemmas 4-5 mm long, with an awn 0.5-2.5 mm long [*L. fascicularis* var. *acuminata*]
 - 5 First glume 1.3-2 mm long; second glume 2.2-3.5; lemmas 3-4 mm long, with an awn 0.5-1 mm long *L. fascicularis* var. *fascicularis*

* *Leptochloa fascicularis* (Lamarck) A. Gray var. *fascicularis*, Bearded Sprangletop. Pd (NC), Cp (SC): bed of artificial impoundment, brackish habitats; rare, adventive from further west. September. Widespread in e. North America, primarily west of the Appalachians (adventive further east), and extending into South America. Reported (as *L. fascicularis*) for SC by Nelson & Kelly (1997). [= C, G; < *L. fascicularis* – RAB, GW, HC, S; < *L. fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – FNA, K; = *Diplachne fascicularis* (Lamarck) Palisot de Beauvois – F]

Leptochloa fascicularis (Lamarck) A. Gray var. *maritima* (Bicknell) Gleason, Salt-meadow Grass. Cp (NC, VA): fresh to brackish marshes, overwash flats, other disturbed brackish habitats; rare. August-October. Along the coast from s. NH south to se. NC. This taxon appears to warrant status as a species separate from *L. fascicularis*. [= C, G; < *L. fascicularis* – RAB, GW, HC, S; = *Diplachne maritima* E.P. Bicknell – F; < *L. fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – FNA, K; = *Leptochloa maritima* (E.P. Bicknell) LeBlond & Sorrie ined.]

Leptochloa panicea (Retzcius) Ohwi ssp. *brachiata* (Steudel) N. Snow, Red Sprangletop. Pd (GA, NC, SC, VA), Cp (NC, SC, VA): disturbed areas; uncommon. June-October. Widespread in the Western Hemisphere. The more familiar name, *L. filiformis*, must be replaced for reasons of nomenclatural priority. [= FNA, K; < *L. filiformis* (Lamarck) Palisot de Beauvois – RAB, C, F, G, GW, HC, K, S, W]

* *Leptochloa panicoides* (J. Presl) A. Hitchcock & Chase, Amazon Sprangletop. Pd (VA), Cp (GA): drawdown habitats on lake margins; rare, native of South America. Belden et al. (2004) discuss the Virginia occurrences along the banks of the Roanoke (Staunton) River at Kerr Reservoir. Also reported for e. GA in the Coastal Plain (Sorrie, pers. comm.). [= C, FNA, G, GW, HC, K; ? *Diplachne halei* Nash – F; ? *Leptochloa floribunda* Doell – S; = *Diplachne panicoides* (J. Presl) McNeill]

* *Leptochloa uninervia* (J. Presl) A. Hitchcock & Chase. Cp (FL, GA, SC, VA), Pd (NC): disturbed areas; rare, adventive from further west. July-August. Widespread in the Western Hemisphere, the native range obscure, but not likely native in our area. Reported for SC by Nelson & Kelly (1997). [= RAB, C, G, GW, HC, K, S; = *L. fusca* (Linnaeus) Kunth ssp. *uninervia* (J. Presl) N. Snow – FNA, K; = *Diplachne uninervia* (J. Presl) Parodi]

* *Leptochloa decipiens* (R. Brown) Stapf ex Maiden ssp. *peacockii* (Maiden & Betche) N. Snow. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= K] {not keyed}

* *Leptochloa digitata* (R. Brown) Domin. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= K] {not keyed}

* *Leptochloa divaricatissima* S.T. Blake. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= K] {not keyed}

* *Leptochloa dubia* (Kunth) Nees. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. Also reported for NC by Kartesz (1999), but the documentation indicates that it was cultivated at a Soil Conservation Service test nursery in Chapel Hill, Orange County. [= FNA, HC, K] {not keyed}

* *Leptochloa fascicularis* (Lamarck) A. Gray var. *acuminata* (Nash) Gleason has been reported as adventive in PA and along highways in WV from halophytic habitats of w. United States (Cusick 1994). [= C, G; *Diplachne acuminata* Nash – F; < *L. fascicularis* – HC; < *L. fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – FNA, K; *L. acuminata* (Nash) Mohlenbrock] {not keyed}

* *Leptochloa virgata* (Linnaeus) Palisot de Beauvois, Tropical Sprangletop. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= FNA, HC, K] {not keyed}

A monotypic genus, and annual, of sc. United States and adjacent Mexico. References: Snow in FNA (2007a); Brandenburg & Thieret (2000)=Z; Tucker (1996)=Y.

Limnodea arkansana (Nuttall) L.H. Dewey. Cp (AL, FL, LA, MS, SC*): hammocks, moist forests (Panhandle FL westward), waste at wool-combing mill, probably not established (SC); rare, introduced, native of sc. United States (w. FL, c. and s. AL, west through MS, LA, and AR to OK, TX, and adjacent Mexico). [= FNA, HC, K, S, Z; = *Cinna arkansana* (Nuttall) G. Tucker – Y]

Lolium Linnaeus 1753 (Rye-grass, Darnel, Fescue)

A genus of about 5 species, annuals and perennials, native to Europe, n. Africa, and temperate Asia. References: Terrell in FNA (2007a); Darbyshire (1993)=Y; Aiken & Darbyshire (1990)=X; Tucker (1996)=Z. Key based in part on C and X. [also see *Schedonorus*]

- 1 Inflorescence paniculate (spikelets borne on branches off the central axis)[see *Schedonorus*]
- 1 Inflorescence spikelike (spikelets sessile on the central axis).
 - 2 Glumes (12-) 15-25 mm long, subcoriaceous, equalling or surpassing the uppermost lemma (therefore the length of the spikelet); florets 4-9 per spikelet; annual ***L. temulentum***
 - 2 Glumes 4-12 mm long, herbaceous, shorter than the lemmas (therefore shorter than the spikelet); florets (2-) 5-22 per spikelet; annual or perennial.
 - 3 Lemmas (at least the upper) awned, the awns to 15 mm long; florets 11-22 per spikelet; annual or perennial.... ***L. perenne* var. *aristatum***
 - 3 Lemmas awnless; florets (2-) 5-10 per spikelet; perennial..... ***L. perenne* var. *perenne***

* ***Lolium perenne*** Linnaeus var. ***aristatum*** Willdenow, Italian Rye-grass, Annual Rye-grass. Cp (GA, NC, SC, VA), Pd (NC, SC), Mt (NC, SC, VA), {FL}: fields, roadsides, pastures, disturbed areas; common (rare in VA), native of Eurasia. April-July. [= C, Z; = *L. multiflorum* Lamarck – RAB, F, FNA, G, HC, S, WV; = *L. perenne* ssp. *multiflorum* (Lamarck) Husnot – K; < *L. perenne* – W]

* ***Lolium perenne*** Linnaeus var. ***perenne***, English Rye-grass, English Rye-grass, Perennial Rye-grass. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, VA), {FL}: fields, roadsides, pastures, disturbed areas; uncommon, native of Eurasia. April-July. [= C, Z; = *L. perenne* – RAB, F, FNA, G, HC, S, WV; = *L. perenne* ssp. *perenne* – K; < *L. perenne* – W]

* ***Lolium temulentum*** Linnaeus ssp. ***temulentum***, Darnel. Pd (GA, NC, VA), Cp (FL, NC, VA), {SC}: fields, roadsides, pastures, disturbed areas; common (rare in FL and VA), native of Eurasia. May-June. [= FNA; < RAB, C, F, HC, S, Z; > *L. temulentum* var. *leptochaetum* A. Braun – G; > *L. temulentum* var. *macrochaeton* A. Braun – G; > *L. temulentum* ssp. *temulentum* – K]

Luziola Antoine Laurent de Jussieu 1789 (Southern Water Grass)

A genus of about 12 species, from s. North America south to tropical South America. References: Terrell in FNA (2007a); Tucker (1988)=Z; Judziewicz et al. (2000)=Y. Key based on Terrell in FNA (2007a).

- 1 Culms prostrate; leaves conspicuously clustered towards the apex of the culms, floating, 1-5 (-8) cm long ***L. fluitans* var. *fluitans***
- 1 Culms suberect to erect; leaves scattered along the culm, not floating, > 6 cm long.
 - 2 Pistillate florets 3-5 mm long; achenes striate..... ***L. bahiensis***
 - 2 Pistillate florets 2-2.5 mm long; achenes smooth..... ***L. peruviana***

*? ***Luziola bahiensis*** (Steudel) Hitchcock. Cp (AL, FL, MS): streams and riverbanks; rare. Apparently native (Anderson & Hall 1993), but considered native of South America by some authors. [= FNA, HC, K]

Luziola fluitans (Michaux) Terrell & H. Robinson var. ***fluitans***, Southern Water Grass. Cp (GA, NC, SC), Pd? (GA?): aquatic in water of natural lakes, slow-moving blackwater rivers, and other stagnant waters; rare (NC Watch List). August-October. Var. *fluitans* ranges from ne. NC to c. FL and west to e. TX; var. *occonerii* (Guzman M.) G. Tucker occurs in the highlands of w. Mexico (Tucker 1988). A very unusual grass, truly aquatic, with flexuous stems and unwettable, floating leaves. In addition to floating leaves (helpful in the field but not in the herbarium!), other useful characters include two secondary blade nerves on either side of the midnerve and virtually as prominent as the midnerve, and which extend onto the sheath where they occur with another 5 or so strong nerves; often with cilia 0.5-1 mm long at the summit of the ventral face of the sheath (an unusual place); and a hyaline ligule about 1 mm long on the same plane as the sheath (i.e., free from the base of diverging blades). [= FNA, Y, Z; < *L. fluitans* – K; < *Hydrochloa carolinensis* Palisot de Beauvois – RAB, GW, HC, S]

* ***Luziola peruviana*** Gmelin, Peruvian Water Grass. Cp (FL): disturbed wet areas; rare. FL Panhandle. Apparently an introduction, occurring in disturbed situations. See Anderson & Hall (1993). [= FNA, HC, K]

Megathyrsus (Pilger) B.K. Simon & S.W.L. Jacobs 2003 (Guinea Grass)

A genus of 3 species. References: Wipff & Thompson in FNA (2003a), amended in FNA (2007a).

* *Megathyrsus maximus* (Jacquin) B.K. Simon & S.W.L. Jacobs, Guinea Grass. Cp (AL, FL, GA): disturbed areas; common, native of Africa. Introduced in the Gulf states (GA, AL, FL) (FNA). [= FNA (2007a); = *Urochloa maxima* – FNA (2003a), K; = *Panicum maximum* Jacquin – HC, S]

Melica Linnaeus 1753 (Melic)

A genus of about 80 species, north temperate, s. Africa and s. South America. References: Barkworth in FNA (2007a); Tucker (1996)=Z.

- 1 First glume oblong, 6.5-10 mm long, 2-4× as long as wide, acute to obtuse at the apex, about the same length and width as the second glume; inflorescence with (0-) 1-5 branches from the lower nodes only; fertile lemmas 2; leaves 1-6 mm wide; [common species, widespread in our area] *M. mutica*
- 1 First glume broadly ovate, 5-8 mm long, 1.5-2× as long as wide, obtuse to rounded at the apex, shorter and broader than the second glume; inflorescence with 2-10 (or more) branches from most nodes; fertile lemmas (2-) 3; leaves 3-12 mm wide; [rare species of the Mountains of NC and VA, northwards and westwards]..... *M. nitens*

Melica mutica Walter, Two-flower Melic. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): forests and woodlands, including coastal fringe and maritime forests; common. April-May. MD west to IN and IL, south to FL and TX. [= RAB, C, F, FNA, G, HC, K, S, W, WV, Z]

Melica nitens (Scribner) Nuttall ex Piper, Three-flower Melic. Mt (GA, NC, VA): rocky upland woodlands, barrens, and glades, over calcareous rocks (such as limestone, calcareous shale); rare. May. PA west to s. MN and NE, south to nw. GA and TX. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

Melinis Palisot de Beauvois 1812 (Natalgrass)

A genus of ca. 22 species, native to Africa and w. Asia. References: Wipff in FNA (2003a).

* *Melinis repens* (Willdenow) Zizka ssp. *repens*, Rose Natalgrass. Cp (FL, GA), Pd, Mt (GA): disturbed areas, roadsides; common (rare north of FL), native of Africa. The report for NC by Kartesz (1999) is an error. [= FNA; < *M. repens* – K; ? *Rhynchelytrum roseum* (Nees) Stapf & C.E. Hubbard ex Bews – HC; < *Rhynchelytrum repens* (Willdenow) C.E. Hubbard]

Microstegium Nees in Lindley 1836 (Sasa-grass, Japanese-grass)

A genus of about 15 species, of subtropical Asia and Africa. References: Barden (1987); Fairbrothers & Gray (1972); Winter, Schmitt, & Edwards (1982); Koyama (1987); Thieret in FNA (2003a).

* *Microstegium vimineum* (Trinius) A. Camus, Japanese Stilt-grass, Flexible Sasa-grass, Japanese-grass. Pd (Ga, NC, SC, NC, VA), Mt (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): disturbed areas, colonizing moist, rich soil, especially in floodplains; common, native of tropical se. Asia. The following chronological synopsis of flora accounts of *Microstegium* is perhaps instructive: not treated by Small (1933), "local" (Fernald 1950), "rarely introduced and possibly not established" (Gleason & Cronquist 1952), "sporadically naturalized" (Godfrey & Wooten 1979), "a rapidly spreading pernicious invader on moist ground, too common" (Wofford 1989). RAB report it from fewer than 1/3 of the counties of the Carolinas (in 1968); it is now undoubtedly in every county, an abundant weed in most of them. This species has become a very serious pest, now ranking as one of the most destructive introduced plants in our area, forming extensive and dense patches, sprawling over and eliminating nearly all other herbaceous plants. Eradication is very difficult, and considering its obvious colonizing abilities, only temporary. Hunt & Zaremba (1992) document the continuing northern expansion of *Microstegium* into NY and CT. Redman (1995) discusses its habitat preferences in MD and DC. Koyama (1987) reports it as "common as undergrowth of forests" in Japan, part of its native distribution. [= RAB, C, FNA, GW, K, W; = *Eulalia viminea* (Trinius) Kuntze – G; > *Eulalia viminea* var. *viminea* – F; > *Eulalia viminea* var. *variabilis* Kuntze – F; > *M. vimineum* var. *vimineum* – HC; > *M. vimineum* var. *imberbe* (Nees) Honda – HC]

Milium Linnaeus 1753 (Wood-millet, Millet-grass)

A genus of 4 species, north temperate. References: Crins in FNA (2007a); Tucker (1996)=Z; Fernald (1950b)=Y.

Milium effusum Linnaeus var. *cisatlanticum* Fernald, American Wood-millet, Millet-grass. Mt (NC, VA): forests at high (or rarely moderate) elevations; rare. June. A circumboreal species, ranging in North America south to w. NC (Swain County), e. TN (Sevier County), w. VA, WV, OH, IN, IL, and MN. The American plants are sometimes segregated as var. *cisatlanticum* Fernald (Fernald 1950b). Though considered "probably accidentally introduced and established" in NC by Radford, Ahles, & Bell (1968), the native occurrence of this northern species is more plausible; the only known occurrence in NC (not recently seen) is in the Great Smoky Mountains National Park. [= K, Y; < *M. effusum* – RAB, C, F, G, HC, W, WV, Z]

Miscanthus Andersson 1855 (Eulalia)

References: Barkworth in FNA (2003a).

* *Miscanthus sinensis* Andersson, Eulalia, Chinese Silver Grass. Mt, Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA): roadsides; common (rare in FL), native of e. Asia. September-November. This species is becoming aggressively weedy. Forms with leaves cross-variegated or linear-variegated with yellow are cultivated and sometimes escape or persist (in addition to the much more common green-leaved form). [= RAB, C, FNA, G, K, S, W, WV; > *M. sinensis* var. *variegatus* Beal – F, HC; > *M. sinensis* var. *zebrinus* Beal – F, HC]

Monanthochloe Engelman 1859 (Shoregrass)

A genus of 2 species, perennials, of tropical and subtropical America. References: Thieret in FNA (2003a).

Monanthochloe littoralis Engelman, Shoregrass, Key Grass. Cp (FL): brackish shores; rare. From n. peninsular FL (Taylor and Dixie cos. on the west coast and Volusia County on the east coast) southward. Also known from sw. LA (Cameron Parish) and TX southward. [= FNA, K, WH]

Muhlenbergia Schreber 1789 (Muhly)

A genus of about 160 species, of North America south to Andean South America, and e. and se. Asia. *Muhlenbergia* is a large and diverse genus; the various groups seem very different. References: Pohl (1969); Gustafson & Peterson (2007)=Y; Morden & Hatch (1989)=Z; Peterson in FNA (2003a).

- 1 Panicle open and diffuse, > 4 cm broad, the spikelets borne on slender or capillary pedicels longer than the lemmas.
- 2 Plant with rhizomes, the rhizomes prominent, creeping, and covered with imbricate scales; culms and sheaths strongly compressed at base, the leaves distichous; spikelets 1.5-2 mm long *M. torreyana*
- 2 Plant without rhizomes, tufted with erect culms (a "bunchgrass"); culm and sheaths terete, the leaves not distichous; spikelets 1.5-5 mm long (excluding awns, if present); [subgenus *Podosemum*].
- 3 Spikelets 1.5-2 mm long, awnless [*M. uniflora*]
- 3 Spikelets 2.5-5 mm long (excluding awns), awned or awnless.
- 4 Lemma awn 0-1.5 (-4) mm long; glume bodies (1.1-) 2.0-3.3 (-3.6) mm long, < ½ as long as the lemma bodies, acuminate, not awned (rarely the second with a short awn < 0.6 mm long); spikelets usually brown or bronze (when fresh); basal sheaths usually very fibrous *M. expansa*
- 4 Lemma awn (2-) 3-35 mm long; glume bodies (0.3-) 0.7-1.7 (-2.4) mm long, > ½ as long as the lemma body, one or both glumes sometimes awned; spikelets usually purple (when fresh); basal sheaths rarely strongly fibrous.
- 5 Lemma awn (2-) 3-13 (-18) mm long, first glume awnless (or rarely with an awn to 3.2 mm long), second glume awnless (or rarely with an awn up to 5.0 mm long), palea awnless; lemma lacking setaceous teeth flanking the awn; flowering late August-October; [widespread in our area, particularly in rocky, clayey, or sandy glades, barrens, and woodlands with prairie affinities]..... *M. capillaris*
- 5 Lemma awn (8-) 12-26 (-35) mm long, first glume awn (0.5-) 1-7 (-10) mm long, second glume awn (1-) 5-19 (-25) mm long, palea awn-tipped; lemma with two setaceous teeth flanking the awn, the teeth 0.5-2.5 (-4.7) mm long; flowering October-November; [of sandy maritime situations on barrier islands of the outer Coastal Plain] *M. sericea*
- 1 Panicle slender, dense, < 2.5 cm broad, the spikelets sessile or on non-capillary pedicels shorter than the lemmas; [subgenus *Muhlenbergia*].
- 5 Glumes minute, 0-0.5 mm long; plant lacking rhizomes; culms weak, decumbent and cespitosely branching in their lower portions, rooting at the nodes, the upper portions erect and sparsely branched *M. schreberi*
- 5 Glumes well-developed, 1-7 mm long; plant with scaly rhizomes (except for *M. cuspidata*); culms firm (rarely sprawling), few or solitary (rarely forming dense colonies).
- 6 Glumes 5-7 mm long (tapered to arched or straight awns), about double the length of the lemma (excluding its awn); panicle dense and spike-like, 2-6 cm long and 3-10 mm broad *M. glomerata*
- 6 Glumes 1.2-3 mm long, shorter than to barely exceeding the lemma; panicle usually slender, arching, generally less dense and not spike-like, often with some elongated (though appressed) branches, 4-50 cm long, 2-15 mm broad.
- 7 Callus glabrous; plant lacking scaly rhizomes (with slender stolons and a hard, knotty crown); leaves 0.5-2 mm wide; [of calcareous cliffs] *M. cuspidata*
- 7 Callus bearded (sometimes only slightly so) (glabrous in *M. glabriflora*); plant with scaly rhizomes; leaves (1-) 2-14 mm wide; [collectively of various habitats].
- 8 Panicle linear, loosely flowered, much exceeding the leaves; culm erect, simple or sparingly branched; glumes relatively broad, the body ovate, 1.2-2.5 mm long, abruptly narrowed to the acuminate tip; ligule obsolete or shorter than the elongate cartilaginous summit of the leaf sheath.
- 9 Lemmas awnless or awn < 0.5 mm long; spikelets 1.5-2.5 mm long; leaf blades usually (1-) 2-6 mm wide *M. sobolifera*
- 9 Lemma awn 1-11 mm long (rarely awnless); spikelets 3-5 mm long; leaf blades (2) 6-10 (-13) mm wide (often > 8 mm wide)... *M. tenuiflora*
- 8 Panicle lanceolate, densely (rarely loosely) flowered, leaves often extending conspicuously into the inflorescence; culm geniculate, freely branched; glumes relatively narrow, the body lanceolate, 2-3 mm long, tapering from base to apex; ligule usually obvious above the short cartilaginous summit of the leaf sheath.
- 10 Culm glabrous throughout (including below the nodes).
- 11 Glumes 1.4-2.0 mm long; ligule 0.2-0.5 mm long *M. bushii*

- 11 Glumes 2-4 (-5) mm long; ligule 0.8-1.5 mm long *M. frondosa*
 10 Culm pubescent, at least below the nodes.
 12 Lemma awn 7-12 mm long; spikelets loosely clustered, on pedicels 2-4 mm long *M. sylvatica*
 12 Lemma awnless or with a short awn tip (rarely to 9 mm long); spikelets densely clustered, on pedicels < 1 mm long.
 13 Lemma glabrous below, or with short basal bearding; ligule 0.5-1.5 mm long *M. glabrifloris*
 13 Lemma pilose basally; ligule 0.5-1 mm long *M. mexicana*

Muhlenbergia bushii Pohl, Bush's Muhly. Pd (VA), Mt (GA), Cp (KY), {NC}: wet oak flatwoods, bottomlands, and other moist forests; rare. IN west IA, south to NE and TX; apparently disjunct eastward in scattered localities, including in n. GA (Jones & Coile 1988) and VA. The habitat is variously given in floras as "dry woods" or "moist woods." [= C, FNA, K; = *M. brachyphylla* Bush – F, G, HC]

Muhlenbergia capillaris (Lamarck) Trinius, Hairgrass. Pd (GA, NC, SC, VA), Cp (FL, GA, KY, NC, SC, TN, VA), Mt (GA, KY, NC, TN, VA), Ip (KY, TN): in the Piedmont and Interior Low Plateau primarily in clayey or thin rocky soils (especially in areas which formerly burned and were prairie-like) and in open woodlands, in the Coastal Plain in savannas, dry woodlands, and coastal grasslands (where sometimes in close proximity with *M. sericea*), in the Mountains around calcareous rock outcrops; uncommon (rare in KY Mountains and Coastal Plain). Late August-October. The species is widespread in e. North America. *M. capillaris* and its relatives, *M. expansa* and *M. sericea*, have been the subject of an herbarium morphological study by Morden & Hatch (1989), who conclude that the three taxa are not sharply separable and should be recognized only at the varietal level. If one considers behavior in the field, ecology, and geography in conjunction with morphological characters, however, there is little doubt that the three taxa are biological species. Distribution and typical habitat are different for the three species, but *M. capillaris* can be found growing with or in proximity to each of the other two (I have not seen *M. sericea* and *M. expansa* together). In such situations, the two taxa present are readily distinguishable at a glance, and there is no evidence of intermediates or hybrids. Gustafson & Peterson (2007) also concluded that the three taxa are separable as species. [= F, FNA, G, W, Y; < *M. capillaris* – RAB, GW (also see *M. sericea*); = *M. capillaris* var. *capillaris* – C, HC, K, S, Z]

Muhlenbergia cuspidata (Torrey ex Hooker) Rydberg, Plains Muhly. Mt (VA), Ip (KY, TN): dolomite and limestone palisade cliffs; rare. OH west to MT and Alberta, south to sw. VA, KY, MO, OK, and NM. The VA occurrences are on dolomite and limestone palisade cliffs along the New, Roanoke, and Shenandoah rivers. [= C, F, FNA, G, HC, K]

Muhlenbergia expansa (Poiret) Trinius, Savanna Hairgrass. Cp (FL, GA, NC, SC, VA): pine savannas, pine flatwoods, mesic areas in sandhill-pocosin ecotones; common (rare in VA). September-October. Se. VA south to FL, west to e. TX (nearly exactly the range of *Pinus palustris*). An important part of the grassy component of many longleaf pine savannas, *M. expansa*'s flowering is stimulated by fire, and, lacking fire, it may be found in large populations in solely vegetative condition. It can be distinguished in sterile condition from other savanna bunchgrasses (*Sporobolus teretifolius*, *S. pinetorum*, *S. floridanus*, *S. curtissii*, *Aristida stricta*, and *A. beyrichiana*) by the following characteristics: old leaf bases fibrous and curly (rather than hardened and cartilaginous) and ligules 1-3 mm long (rather than 0.2 to 0.5 mm long). The open panicle somewhat resembles that of several species of similar habitat which often co-occur with *M. expansa* – *Sporobolus teretifolius*, *S. pinetorum*, *S. curtissii*, *S. floridanus*, and *Calamovilfa brevipilis*, but the panicle of *M. expansa* is capillary, flexuous, and fragile, tending to break up over the winter (vs. fine-textured but not capillary, the branches rigid and ascending, more likely to persist over the winter in relatively intact condition). The vegetative characters listed above and under *Calamovilfa brevipilis* are also useful. See *M. capillaris* for a discussion of recent studies on the *M. capillaris* complex. [= RAB, F, FNA, GW, HC, S, Y; = *M. capillaris* var. *trichopodes* (Elliott) Vasey – C, K, Z]

Muhlenbergia frondosa (Poiret) Fernald, Smooth Wirestem Muhly. Mt (GA, KY, NC, VA), Pd (GA, NC, VA), Cp (KY, NC), Ip (KY): moist forests and disturbed areas; uncommon (rare in Piedmont, rare in NC Coastal Plain, rare in KY Mountains). September-October. This species is widespread in e. North America, south to ne. GA and west into the Plains. [= RAB, C, F, FNA, G, GW, HC, K, W, WV; = *M. mexicana* – S, misapplied]

Muhlenbergia glabriflora Scribner, Clay-pan Muhly. Ip (KY, TN), Cp (KY), Pd (NC, VA): open oak flatwoods, other open habitats, in clayey soils; rare. October-November. VA and NC west to IA, MO, AL, and TX, local and apparently rare in all of that range. In NC, only known from one collection, that from Durham County in 1936, with vague habitat data. F describes the habitat as "dry exciccated or baked soils, prairies, gravels or rocky slopes," Pohl (1969) as "mostly on low ground, in shade on heavy clay soils." [= C, F, G, HC, K; = *M. glabrifloris* – FNA, orthographic variant]

Muhlenbergia glomerata (Willdenow) Trinius, Spiked Muhly. Mt (NC, VA): fens and seeps over mafic (amphibolite) or ultramafic (olivine) rocks; rare. August-October. This species is widespread in n. North America, ranging south in a scattered and disjunct pattern to NC. [= RAB, C, F, FNA, GW, HC, K, W; < *M. racemosa* (Michaux) Britton, Sterns, & Poggenburg – G, S]

Muhlenbergia mexicana (Linnaeus) Trinius, Hairy Wirestem Muhly. Mt (NC, VA), Pd (VA): forest edges; uncommon (rare in NC). September-October. The epithet is a misnomer; the species is largely northern, occurring nearly throughout the United States and s. Canada. [= RAB, C, F, G, HC, K, W, WV; > *M. mexicana* var. *filiformis* (Torrey) Scribner – FNA; > *M. mexicana* var. *mexicana* – FNA; = *M. foliosa* (Roemer & J.A. Schultes) Trinius – S]

Muhlenbergia schreberi J.F. Gmelin, Nimblewill, Dropseed. Mt (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, KY, NC, SC, VA), Ip (KY): bottomland and other moist forests, disturbed areas; common (uncommon in FL). August-October. This species is widespread in e. United States. [= RAB, C, F, FNA, GW, HC, K, S, W, WV; > *M. schreberi* var. *schreberi* – G; > *M. schreberi* var. *palustris* (Scribner) Scribner – G; > *M. palustris* Scribner]

Muhlenbergia sericea (Michaux) P.M. Peterson, Dune Hairgrass, Sweet Grass. Cp (FL, GA, NC, SC): maritime dry grasslands, maritime wet grasslands, interdune swales, low dunes, sometimes edges of freshwater or brackish marshes, apparently limited to the barrier islands (sometimes in close proximity with *M. capillaris*); uncommon, though sometimes locally abundant (SC Rare). October-November. This species is a very conspicuous part of the Outer Banks flora in the autumn, especially showy and abundant between Rodanthe (Chicamacomico) and Avon (Kinnakeet), Dare County, NC, and also abundant on Ocracoke

Island, Hyde County, NC. The capillary pedicels and awns of its purple inflorescences are so light as to be moved by the slightest breeze. By December or January they fade to tan, but remain showy. This grass is a major component of baskets made in the Low Country of SC by the Gullah, who call it "sweet grass." I agree with Curtis (1843), Blomquist (1948), Pinson & Batson (1971), Gould (1975), and others who consider *M. sericea* (as *M. filipes*) a species distinct from *M. capillaris*. Its range is from NC (slightly north of Oregon Inlet, Dare County, south of Nags Head) south to FL and west to TX, primarily on barrier islands. In addition to a discussion of its relationship to *M. capillaris*, Pinson and Batson (1971) and Morden & Hatch (1989) provide descriptions, not elsewhere available. See *M. capillaris* for a discussion of recent studies on this complex. [= FNA, Y; < *M. capillaris* – RAB, GW; = *M. capillaris* var. *filipes* (M.A. Curtis) Chapman ex Beal – HC, K, S, Z; = *M. filipes* M.A. Curtis]

Muhlenbergia sobolifera (Muhlenberg ex Willdenow) Trinius, Rock Muhly. Mt (GA, KY, NC, VA), Pd (VA), Cp (VA), Ip (KY), Cp (KY): dry wooded limestone slopes, rock outcrops and rocky forests; uncommon (uncommon in VA, rare in GA and NC, rare in VA Coastal Plain). July-September. ME, WI, and KS south to n. GA, n. AL, n. MS, and c. TX. [= RAB, C, F, FNA, G, HC, K, S, W, WV]

Muhlenbergia sylvatica Torrey ex A. Gray, Woodland Muhly. Mt (GA, KY, NC, SC, VA), Pd (NC, VA), Ip (KY), Cp (KY, VA): bottomland and other moist forests, calcareous streambanks; uncommon (rare in GA and NC). September. ME and MN south to SC, ne. GA, AL, and TX. [= RAB, C, FNA, K, W, WV; > *M. sylvatica* var. *sylvatica* – F, G, GW, HC; = *M. umbrosa* Scribner – S]

Muhlenbergia tenuiflora (Willdenow) Britton, Sterns, & Poggenburg, Slender Muhly. Mt (GA, KY, NC, VA), Pd (GA, NC, VA), Cp (VA), Ip (KY), {SC}: moist forests and disturbed areas, up to at least 1400m; uncommon (rare in Piedmont south of VA, rare in VA Coastal Plain). August-October. NH, WI, and NE south to GA, AL, MS, and OK. Two varieties are sometimes recognized: var. *tenuiflora*, with lemma awn 4-11 mm long and the sheaths and stems retrorsely hirsute, especially around the nodes, and var. *variabilis* (endemic to the Southern Appalachians), with lemma awn 1-4 mm long or absent, and the sheaths and stems glabrous or nearly so. The validity of the varieties needs further assessment. [= RAB, F, FNA, G, HC, K, S, W, WV; > *M. tenuiflora* var. *tenuiflora* – C; > *M. tenuiflora* var. *variabilis* (Scribner) Pohl – C]

Muhlenbergia torreyana (J.A. Schultes) A.S. Hitchcock, Pinebarren Smokegrass. Cp (GA, NC), Ip (TN), {KY?}: in the Coastal Plain in moist soils of depression meadows and clay-based Carolina bays, often under or near *Taxodium ascendens*, in the Interior low Plateau and Cumberland Plateau in moist grassy oak savannas; rare. August-November. NJ to GA in the Coastal Plain, and disjunct in KY (?) and TN; currently known to be extant only in NJ, NC, and TN. It was first discovered in NC in 1987. Although it rarely flowers except following fire, it can be recognized in sterile condition by its forming clonal patches with evenly spaced, upright, blue-green tufts, each tuft a flattened stem with 5-10 ascending-erect, rather stiff, usually conduplicate leaves, the summit of each sheath with a pronounced cartilaginous thickening, easily felt by running the flattened stem from base to apex between thumb and forefinger. [= C, F, FNA, G, HC, K; = *Sporobolus torreyanus* (J.A. Schultes) Nash – S]

Muhlenbergia asperifolia (Nees & Meyen ex Trinius) Parodi, Alkali Muhly, Scratchgrass. Alkaline soils, wetlands, lawns. Reported east and south to MD, PA, and OH (Kartesz 1999). [= C, F, FNA, G, HC, K] {not yet keyed}

* ***Muhlenbergia emersleyi*** Vasey, Bull Muhly, is reported as introduced in NC (Kartesz 1999) from its native range in TX, NM, AZ, and Mexico, based on a specimen at the UNC Herbarium. However, the specimen makes clear that it was cultivated at a Soil Conservation Service test nursery; there is no evidence that the species is established in our area. [= FNA, HC, K] {not keyed}

Muhlenbergia uniflora (Muhlenberg) Fernald. Bogs, wet meadows. South to NJ and se. PA (Rhoads & Klein 1993). [= C, FNA, G, HC, K; > *M. uniflora* var. *uniflora* – F] {not yet keyed}

Nassella (Trinius) Desvauz 1846

A genus of ca. 116 species, mainly perennials, mainly of South America. References: Barkworth in FNA (2007a). Key based on Barkworth in FNA (2007a).

- 1 Florets 1.5-2.5 mm long; leaves 0.2-0.6 mm wide, stiff and tightly convolute *N. trichotoma*
- 1 Florets 3.4-13 mm long; leaves 1-8 mm wide, flat or convolute.
 - 2 Crown (surrounding the base of the awn) as wide or wider than long, the rim with hairs <0.5 mm long; floret widest just below the crown [*N. neesiana*]
 - 2 Crown longer than wide, the rim with hairs 1-2 mm long; floret widest near or only slightly above the middle.
 - 3 Florets 6.5-13 mm long; crown usually flaring at the tip; awns 40-90 mm long *N. leucotricha*
 - 3 Florets 6-8 mm long; crown parallel-sided; awns 30-50 mm long [*N. manicata*]

* ***Nassella leucotricha*** (Trinius & Ruprecht) Pohl, Texas Needlegrass. Cp (SC): waste areas near wool-combing mill; rare, native of sc. United States and Mexico. [= FNA, K; = *Stipa leucotricha* Trinius & Ruprecht – HC]

* ***Nassella trichotoma*** (Nees) Hackel ex Arechavaleta, Serrated Tussockgrass. Cp, Pd (NC, SC): fields; rare, native of South America, perhaps extirpated as a noxious weed. [= FNA; = *Stipa trichotoma* Nees]

* ***Nassella manicata*** (E. Desv.) Barkworth, Andean Tussockgrass. Reported from MS; perhaps only a waif. [= FNA; = *Stipa manicata* E. Desv.]

* ***Nassella neesiana*** (Trinius & Ruprecht) Barkworth, Uruguayan Tussockgrass. Known only from old collections on ballast from Mobile, AL. [= FNA; = *Stipa neesiana* Trinius & Ruprecht]

Neeragrostis Bush 1903

A monotypic genus of warm temperate North America and tropical Central America and n. South America. References: Peterson & Harvey (in prep.)=Z.

Neeragrostis reptans (Michaux) Nicora, is reported for scattered locations as far east as c. TN by Chester et al. (1993), as well as in WV, KY, and possibly GA (Kartesz 1999). [= K, Z; = *Eragrostis reptans* (Michaux) Nees – C, F, G, GW, HC]

Oplismenus Palisot de Beauvois 1807 (Woods-grass, Basket-grass)

A genus of about 5 species, widespread in the New World and Old World tropics, subtropics, and warm temperate areas. References: Wipff in FNA (2003a); Crins (1991)=Z; Scholz (1981)=Y; Peterson et al. (1999).

- 1 Sheath and culm axis glabrous or with a few scattered hairs, the hairs < 1 mm long; lemma (7-) 9-11-veined *O. hirtellus* ssp. *setarius*
 1 Sheath and culm axis noticeably pilose, the hairs 1-3 mm long; lemma 7-veined [*O. hirtellus* ssp. *undulatifolius*]

Oplismenus hirtellus (Linnaeus) Palisot de Beauvois ssp. *setarius* (Lamarck) Mez ex Ekman, Woods-grass. Cp (FL, GA, NC, SC), Pd (GA, SC): hammocks, maritime forests, shell middens, moist forests; common (uncommon north of FL). August-October. *O. hirtellus* is widespread in tropical and subtropical areas of the New and Old World; ssp. *setarius* ranges from e. NC south to FL, west to AR and TX, and south through the Caribbean and Central America to central South America. Scholz (1981) recognizes many other ssp. This species is undoubtedly native in our area, occurring in undisturbed habitats in natural communities entirely devoid of alien species; the basis of Gould's (1975) assertion that *Oplismenus* is "introduced or adventive in the United States" is unknown. Superficially, *Oplismenus* resembles *Arthraxon*, but has the leaves only slightly cordate at the base (vs. strongly cordate-clasping). Crins (1991) favors treating *O. setarius* as a taxonomically unrecognized component within a polymorphic *O. hirtellus*. [= FNA, K, Y; = *O. setarius* (Lamarck) Roemer & J.A. Schultes – RAB, HC, S; < *O. hirtellus* (Linnaeus) Palisot de Beauvois – Z]

* *Oplismenus hirtellus* (Linnaeus) Palisot de Beauvois ssp. *undulatifolius* (Ard.) U. Scholz, native to the Eastern Hemisphere, has been reported as an introduction in Baltimore Co., MD (Peterson et al. 1999). It can be expected to spread, and may likely be found in our area. [= FNA, K, Y; < *O. hirtellus* (Linnaeus) Palisot de Beauvois – Z]

* *Oplismenus burmannii* (Retzius) Palisot de Beauvois has been collected in peninsular FL just south of our area and may eventually appear farther north (Davis, Judd, & Perkins (2006). {not keyed}

Oryza Linnaeus 1753 (Rice)

A genus of about 20 species, native of tropical and warm temperate portions of the Old World. References: Barkworth & Terrell in FNA (2007a); Tucker (1988)=Z; Judziewicz et al. (2000)=Y; Nanda & Sharma (2003)=X.

* ***Oryza sativa*** Linnaeus, Rice. Cp (GA, NC, SC, VA?): marshes, impoundments; rare, of only sporadic occurrence outside of cultivation, native of Asia. October. Perhaps the single most important food crop in the world, developed as a crop in Asia and cultivated at least since 10,000 years BP (Hancock 2004). Rice was an important crop before the Civil War in SC, GA, and extreme se. NC. Most rice planted today in our area is in waterfowl impoundments. [= RAB, C, FNA, G, GW, HC, K, S, X, Y, Z]

Oryzopsis Michaux 1803 (Ricegrass)

A monospecific genus, a perennial, of ne. North America. References: Barkworth in FNA (2007a). [also see *Piptatherum*]

Oryzopsis asperifolia Michaux, Rough-leaved Ricegrass, Whiteseed Mountain-ricegrass. Mt (VA): high elevation pine-oak/heath barrens and woodlands; rare. Newfoundland west to British Columbia, south to w. VA (Rockingham County), WV, n. IN, SD, NM, and UT. This grass forms large cespitose clumps, the leaves evergreen and somewhat bicolored (green on the upper surface, bluish on the lower). [= C, F, FNA, G, HC, K, WV]

Panicum Linnaeus 1753 (Panic Grass)

(contributed by Richard J. LeBlond)

{INTRODUCTION: Describe differences between *Panicum*, *Dichanthelium*, *Urochloa* (= *Brachiaria*), and *Paspalidium* (now in *Setaria*), all of which are treated as *Panicum* in RAB. Describe collection methods and character analysis.} [also see *Dichanthelium*, *Megathyrsus*, *Phanopyrum*, *Setaria*, *Steinchisma*, and *Urochloa*]

There has been considerable controversy over the generic limits of *Panicum*. In its broader recent conceptions, it has been considered to include (in our area) taxa sometimes and variously segregated as *Brachiaria*, *Dichanthelium*, *Eriochloa*, *Paspalidium*, *Phanopyrum*, *Steinchisma*, and *Urochloa*. All were originally recognized based on morphological characteristics, to which have recently been added anatomical, chemical, and other evidence. Crins (1991) recognizes *Eriochloa*, *Urochloa* (including *Brachiaria*), *Paspalidium*, and *Panicum* as genera, with *Panicum* subdivided into subgenera *Panicum*, *Agrostoides*,

Dichanthelium, *Phanopyrum*, and *Steinchisma*. We prefer to recognize most of the segregates as genera, pending further analyses, since there is little evidence that these groups are more closely related to one another than they are to other genera recognized in the Paniceae. *Phanopyrum* and *Dichanthelium* are the only segregate groups with C₃ photosynthesis. *Eriochloa* and *Urochloa* (including *Brachiaria*) have C₄ photosynthesis, with PEP-ck decarboxylation. *Panicum* and *Setaria* (*Paspalidium*) have C₄ photosynthesis, with NAD-me or NADP-me decarboxylation. *Steinchisma*, in addition to its unusual expansion of the palea, apparently has a peculiar photosynthetic pathway, described by Crins (1991) as "intermediate between" C₃ and C₄ photosynthesis; "the leaves have Kranz anatomy, but there are fewer organelles than usual in the outer sheath."

We agree with Hansen & Wunderlin (1988) that "*Dichanthelium* is as 'good' a grass genus as many others (e.g. *Brachiaria*, *Sacciolepis*, and many more in other tribes)." Despite arguments to the contrary, there is little doubt that *Dichanthelium* is a natural group. Zuloaga, Ellis, and Morrone (1993) argue against the recognition of *Dichanthelium* as a genus, preferring to treat it as a subgenus under *Panicum*. They state, however, "within *Panicum*, *Dichanthelium* can be distinguished at the subgeneric level by the following set of characters: lax inflorescences; ellipsoid to obovoid spikelets; upper glume and lower lemma usually 7-11 nerved; upper antherium apiculate or shortly crested, and simple papillae on the lemma and palea. Anatomically, all species are non-Kranz or C₃, with the outer parenchymatous sheath lacking specialized chloroplasts", etc. The argument that *Phanopyrum* also has C₃ photosynthesis does not materially affect the issue of the taxonomic rank at which to recognize the groups.

We also agree with Hansen & Wunderlin (1988) that "the acceptance of *Dichanthelium* provides a more consistent generic classification." It offers conveniences, as well, in our area, where *Dichanthelium* and *Panicum* are readily distinguishable from each other, and the combined genus would be very large, indeed. References: Lelong (1986)=Z; Zuloaga & Morrone (1996)=Y; Freckmann & Lelong in FNA (2003a).

Panicum amarum* Elliott var. *amarulum (A.S. Hitchcock & Chase) P.G. Palmer, Southern Seabeach Grass. Cp (FL, GA, NC, SC, VA): coastal dunes and shores, sandflats, and sandhills; rare. July-November. NJ s. to FL and West Indies, w. to TX and Mexico; restricted to the Coastal Plain except for WV. Although well-marked individuals of var. *amarulum* and var. *amarum* are quite distinctive, only the number and structure of first glume nerves appears to be a constant over the range of the two taxa (Palmer 1975). Primarily a coastal plant, var. *amarulum* has been found in the Sandhills of NC (Richmond Co.). Blomquist 1948 says this taxon "does not seem to grow naturally in North Carolina." [= K, Z; = *P. amarulum* A.S. Hitchcock & Chase – RAB, C, F, G, HC, S, WV; = *P. amarum* ssp. *amarulum* (A.S. Hitchcock & Chase) Freckmann & Lelong – FNA; not ***Panicum***]

Panicum amarum* Elliott var. *amarum, Bitter Seabeach Grass. Cp (FL, GA, NC, SC, VA): coastal dunes and shores; common. August-November. CT s. to FL, w. to TX; restricted to the coast. See note under var. *amarulum*. [= K, Z; = *P. amarum* – RAB, C, F, G, HC, S; = *P. amarum* ssp. *amarum* – FNA; not ***Panicum***]

Panicum anceps* Michaux var. *anceps, Beaked Panic Grass. Mt, Pd (NC, SC, VA), Cp (FL, NC, SC, VA), {GA}: moist sandy woods, swamps, sloughs, roadsides, fields, waste places; common. June-October. NJ w. to IL, s. to FL and TX. The sheaths of var. *anceps* are glabrous to pilose, while those of var. *rhizomatum* are often villous; the leaves of var. *rhizomatum* also tend to be hairier. [= RAB, F, G, Z; < *P. anceps* – C, GW, K, W; = *P. anceps* ssp. *anceps* – FNA; = *P. anceps* – HC, S, WV; not ***Panicum***]

Panicum anceps Michaux var. *rhizomatum* (A.S. Hitchcock & Chase) Fernald, Small Beaked Panic Grass. Cp (FL, GA, NC, SC, VA): moist to dry sandy or loamy pinelands, ditches; common (rare in VA). July-October. Se. VA and KY s. to FL and TX. See note under var. *anceps*. [= RAB, F, G, Z; < *P. anceps* – C, GW, K; = *P. anceps* ssp. *rhizomatum* (A.S. Hitchcock & Chase) Freckmann & Lelong – FNA; = *P. rhizomatum* A.S. Hitchcock & Chase – HC, S; not **Panicum**]

* *Panicum antidotale* Retzius, Blue Panic Grass. Cp (NC?, SC): open, disturbed areas and fields; rare, native of India and c. Asia. Reported for NC and SC (FNA, Kartesz 1999). Established in NC, SC, AL; TX west to CA. [= FNA, HC, K; not **Panicum**]

* *Panicum bergii* Arechavaleta, Berg's Panic Grass. Cp (GA): ditches and shallow, sporadically flooded depressions in grasslands; rare, native of South America. Reported for se. GA (HC), AL (Kartesz 1999), and se. TX. [= FNA, HC, K, S; > *P. pilcomayense* Hackel; **Panicum** s.s.]

* *Panicum bisulcatum* Thunberg, Blackseed Panic Grass. Cp (GA, SC): wet, disturbed, open areas; rare, native of Asia. Reported introduction in SC, GA, and PA (Kartesz 1999), and as a ballast plant for se. PA (Philadelphia) (Rhoads & Klein 1993, as *P. acroanthum* Steudel). [= FNA, K; > *P. acroanthum* Steudel]

Panicum brachyanthum Steudel, Prairie Panic Grass. Cp (GA): prairies and pinelands; rare. W. LA, AR, OK, and e. TX; disjunct eastward in se. MS and sw. GA. [= FNA, HC, K]

Panicum capillare Linnaeus, Old-witch Grass, Tumbleweed, Tickle Grass. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, VA): open sandy or stony soil, fields, roadsides, waste places, often weedy in cultivated soil; common (rare in SC). August-November. E. to c. Canada, s. to FL and TX; Bermuda. Plants formerly known as *P. capillare* var. *occidentale* Rydberg, ranging from Canada south to NJ, WV, KY, TX, and CA, are distinguished by long-acuminate spikelets 2.5-4 mm long that are mostly sessile or short-pedicelled. In our region, *P. capillare* has short-acuminate spikelets 1.8-2.8 mm long, mostly on long pedicels. [= RAB, K, S, WV, Z; < *P. capillare* – C, Y (also see *P. gattingeri*); > *P. capillare* var. *capillare* – F, HC, W; = *P. capillare* ssp. *capillare* – FNA; = *P. capillare* var. *agreste* Gattinger – G; **Panicum** s.s.]

Panicum dichotomiflorum Michaux var. *dichotomiflorum*, Spreading Panic Grass, Fall Panic Grass. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): marshy shores, exposed wet soils, alluvial deposits in floodplain forests, spoil banks, ditches; common. July-October. E. Canada west to British Columbia, south to FL and TX; also in the Bahamas (Sorrie & LeBlond 1997). Plants with geniculate bases, enlarged lower nodes and sheaths, and panicles with included peduncles and divergent branches have been recognized as var. *geniculatum* (A. Wood) Fernald. [= F, G, K, W; < *P. dichotomiflorum* – RAB, GW, S, Z; > *P. dichotomiflorum* var. *geniculatum* (Wood) Fernald – F, G, W; = *P. dichotomiflorum* ssp. *dichotomiflorum* – FNA; < *P. dichotomiflorum* var. *dichotomiflorum* – HC; **Panicum** s.s.]

Panicum dichotomiflorum Michaux var. *puritanorum* Svenson, Puritan Panic Grass. Cp (VA): wet sands and peats of seasonally exposed pond and lake shores; local. July-October. Nova Scotia, NH, and NY south to DE and VA; IN and IL. Plants from DE northward typically have slender culms 0.3-6 dm long and leaves 1-8 mm wide. Plants with floral characters of var. *puritanorum* but with nominate-like stout culms 0.8-2 m long and leaves 7-25 mm wide occur in bottomlands in se. VA, and have been recognized as *P. dichotomiflorum* var. *imperatorum* Fernald. For the time being they are placed here based on floral characters (they will key here), but need further study. [= F, G, K; < *P. dichotomiflorum* – C; > *P. dichotomiflorum* var. *imperatorum* Fernald – F; = *P. dichotomiflorum* ssp. *puritanorum* (Svenson) Freckmann & Lelong – FNA; > *P. dichotomiflorum* var. *puritanorum* – HC; **Panicum** s.s.]

Panicum flexile (Gattinger) Scribner, Wiry Panic Grass. Pd (GA, NC, SC, VA), Mt (GA, NC, VA), Cp (FL): glades and openings over mafic rocks, damp sandy meadows, open woods; rare. July-October. NY, sw. Québec, S. Ontario, and ND south to FL and TX. First reported for SC by Nelson & Kelly (1997). [= RAB, C, F, FNA, G, HC, K, S, W, WV, Y, Z; **Panicum** s.s.]

Panicum gattingeri Nash, Gattinger's Panic Grass. Mt, Pd (NC, VA), {GA}: damp or dry, usually calcareous sandy soils of fields, roadsides, shores, and cultivated ground; common in Mountains, uncommon in Piedmont (rare in VA). August-October. NY, sw. Québec, and MN south to NC, TN, GA, AL, and AR. [= RAB, F, HC, K, S, WV; < *P. capillare* – C, Y; = *P. philadelphicum* Bernhardt ex Trinius ssp. *gattingeri* (Nash) Freckmann & Lelong – FNA; = *P. capillare* Linnaeus var. *campestre* Gattinger – G, W; **Panicum** s.s.]

Panicum hemitomon J.A. Schultes, Maidencane. Cp (FL, GA, NC, SC, VA), Mt (VA): lake, pond, and river shores, swamp borders, marshes, ditches, often in shallow water; common (rare in VA). June-July. Coastal Plain from s. NJ south to FL, west to TX; also TN; South America. Often forming dense colonies in the low margin and shallow waters of limesink ponds. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Z; not **Panicum**]

Panicum lithophilum Swallen, Flatrock Panic Grass. Pd (GA, NC, SC), Mt (NC): soil islands on granitic flatrocks and domes; rare. August-October. Restricted to granite outcrops in NC, SC, and ec. GA. There is some question about the distinctness of this taxon from *P. philadelphicum*; Zuloaga & Morrone (1996) did not consider it separable from *P. philadelphicum*. [= RAB, HC, K; = *P. philadelphicum* Bernhardt ex Trinius ssp. *lithophilum* (Swallen) Freckmann & Lelong – FNA; < *P. capillare* Linnaeus var. *sylvaticum* Torrey – W; < *P. philadelphicum* – Y; **Panicum** s.s.]

Panicum longifolium Torrey var. *combsii* (Scribner & Ball) Fernald, Combs Panic Grass. Cp (FL, GA, NC, SC, VA): pond shores, depression meadows, cypress savannas, marshes, low woods; uncommon (rare in VA). July-October. Scattered on the outer Coastal Plain from se. MA, NJ, se. VA, se. NC, e. SC, e. GA, and FL, west to se. LA. First glumes of var. *combsii* typically are longer than 1.5 mm long, while those of var. *longifolium* are shorter than 1.5 mm long. [= RAB, F, G; = *P. rigidulum* Bosc ex Nees ssp. *combsii* (Scribner & Ball) Freckmann & Lelong – FNA; = *P. rigidulum* Bosc ex Nees var. *combsii* (Scribner & Ball) Lelong – K, Z; < *P. longifolium* – C; = *P. combsii* Scribner & Ball – HC, S; not **Panicum**]

Panicum longifolium Torrey var. *longifolium*, Long-leaved Panic Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC, VA): wet sandy or peaty soils of bogs, savannas, pond shores, depression meadows; common (uncommon in Piedmont, rare in Mountains). July-October. Nova Scotia, NH, MA, PA, and IN south to FL, west to TX. See note under var. *combsii*. [= RAB, G; = *P. rigidulum* Bosc ex Nees ssp. *pubescens* (Vasey) Freckmann & Lelong – FNA; = *P. rigidulum* Bosc ex Nees var. *pubescens* (Vasey) Lelong – K, W, Z; < *P. longifolium* – C, GW; = *P. longifolium* – HC, S; > *P. longifolium* var. *longifolium* – F; > *P. longifolium* var. *pubescens* (Vasey) Fernald – F; not **Panicum**]

* *Panicum miliaceum* Linnaeus ssp. *miliaceum*, Broomcorn Millet, Proso Millet, Hog Millet. Cp (FL, NC), Mt (VA), Pd (VA): planted in wildlife food plots, sometimes persistent or self-sowing; rare, introduced, native of Eurasia. July-October. [= C, FNA, K; < *P. miliaceum* – F, G, HC, S, Y; *Panicum* s.s.]

Panicum philadelphicum Bernhardt ex Trinius, Woodland Panic Grass. Pd, Mt (GA, NC, SC, VA), Cp (VA): glades, barrens, desiccated pondshores, riversides, or other rocky or dry sandy soil of open woods and roadsides; common (rare in SC). Nova Scotia west to WI, south to GA and e. TX. Plants formerly known as *P. tuckermanii* Fernald, ranging from se. Canada south to n. VA and OH, are distinguished by included or short-exserted peduncles less than one-third as long as the panicles. [= RAB, C, G, K, S, WV; > *P. philadelphicum* – F, HC; > *P. tuckermanii* Fernald – F, HC; = *P. philadelphicum* Bernhardt ex Trinius ssp. *philadelphicum* – FNA; < *P. capillare* Linnaeus var. *sylvaticum* Torrey – W; < *P. philadelphicum* – Y (also see *P. lithophilum*); *Panicum* s.s.]

* *Panicum repens* Linnaeus, Torpedo Grass. Cp (FL, GA, NC, SC): disturbed coastal sands, in area where ship's ballast was deposited; common (rare north of FL), native of Europe. First reported for NC by Leonard (1971b). [= FNA, GW, HC, K, S; *Panicum* s.s.]

Panicum rigidulum Bosc ex Nees var. *condensum* (Nash) Mohlenbrock, Dense Panic Grass. Cp (FL, GA, NC, SC, VA): marshes, meadows, low woods, ditches, stream and pond shores, freshwater tidal shores; uncommon. September-October. Coastal Plain south from se. MA to FL, west to se. TX and AR; West Indies. Usually readily identified by its tall stature and compact inflorescence, somewhat resembling a large *P. hemitomon*, with which it occasionally occurs. [= *P. agrostoides* Sprengel var. *condensum* (Nash) Fernald – RAB, F; < *P. rigidulum* – C, GW; < *P. rigidulum* Bosc ex Nees ssp. *rigidulum* – FNA; < *P. agrostoides* – G; = *P. condensum* Nash – HC, S; < *P. rigidulum* var. *rigidulum* – K, Z; not *Panicum*]

Panicum rigidulum Bosc ex Nees var. *elongatum* (Pursh) Lelong, Tall Flat Panic Grass. Pd, Cp, Mt (GA, NC, SC, VA): marshes, low woods, ditches, swamps, shores, meadows; uncommon (common in Piedmont). August-October. CT and NY west to IN, south to GA, LA, and ne. TX. [= K, W, Z; = *P. stipitatum* Nash – RAB, F, HC, S, WV; = *P. rigidulum* Bosc ex Nees ssp. *elongatum* (Pursh) Freckmann & Lelong – FNA; < *P. rigidulum* – C, GW; = *P. agrostoides* Sprengel var. *elongatum* (Pursh) Scribner – G; not *Panicum*]

Panicum rigidulum Bosc ex Nees var. *rigidulum*, Redtop Panic Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): wet sandy or peaty soils low woods, meadows, marshes, shores, swamps, ditches; common. July-October. ME and MI south to FL and TX; also in CA and British Columbia; Central America. [= W; = *P. agrostoides* Sprengel var. *agrostoides* – RAB, G; < *P. rigidulum* Bosc ex Nees ssp. *rigidulum* – FNA; < *P. rigidulum* var. *rigidulum* – K, Z; < *P. rigidulum* – C, GW; > *P. agrostoides* var. *agrostoides* – F, HC; > *P. agrostoides* var. *ramosius* (C. Mohr) Fernald – F, HC; = *P. agrostoides* – S, WV; not *Panicum*]

Panicum tenerum Beyrich ex Trinius, Southeastern Panic Grass. Cp (FL, GA, NC, SC): limesink ponds, depression meadows, cypress savannas, wet pinelands, bogs; uncommon (rare north of FL). June-September. Coastal Plain from se. NC to FL, west to e. TX; West Indies. The rhizomes produce lines of closely spaced culms. Though 0.5-1 m tall, the culms are narrow and inconspicuous. [= RAB, FNA, GW, HC, K, S, Z; not *Panicum*]

Panicum verrucosum Muhlenberg, Warty Panic Grass. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): wet pinelands, marshes, shores, ditches; common (uncommon in Piedmont, rare in Mountains). August-October. MA and PA west to MI and IN, south to FL and se. TX. Spikelets deep green, the warty surface unique among *Panicum* in our region. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Z; not *Panicum*]

Panicum virgatum Linnaeus var. *cubense* Grisebach, Blunt Panic Grass. Cp (FL, GA, NC, SC, VA?): wet to dry sandy pinelands; uncommon. June-October. Coastal Plain from MA to FL, west to MS; also in MI; West Indies. [= F, HC, S; < *P. virgatum* – RAB, C, FNA, G, GW, W, Z; < *P. virgatum* var. *virgatum* – K]

Panicum virgatum Linnaeus var. *virgatum*, Switchgrass. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): dry or wet sandy soils of pinelands, fresh and brackish marshes, shores; common (uncommon in Mountains). June-October. Sw. Québec and ND south to FL and TX, west to NV; Bermuda; Central and South America. [= F, HC, S; < *P. virgatum* – RAB, C, FNA, G, GW, W, WV, Z; < *P. virgatum* var. *virgatum* – K; not *Panicum*]

* *Panicum miliaceum* Linnaeus ssp. *ruderales* (Kitagawa) Tzvelev, Panic Millet. [= FNA, K; = *P. miliaceum* ssp. *spontaneum* (Kit.) Tzvelev – C; < *P. miliaceum* – F, G, HC; *Panicum* s.s.] {not yet keyed}

Panicum virgatum Linnaeus var. *spissum* Linder, Tufted Switchgrass. Gravelly or sandy fresh to brackish shores and swamps. E. Canada south to PA, MD, and DE (Kartesz 1999). [= F, HC, K; < *P. virgatum* – C, FNA, G; not *Panicum*]

Parapholis C.E. Hubbard 1946 (Sickle Grass)

A genus of 6 species, annuals, of Eurasia. References: Worley in FNA (2007a); Tucker (1996)=Z.

* *Parapholis incurva* (Linnaeus) C.E. Hubbard, Sickle Grass, Hard Grass, Thin-tail. Cp (NC, VA): sandy and muddy flats, brackish or salt marshes; rare, native of Europe. [= RAB, C, FNA, HC, K, Z; = *Pholiurus incurvus* (Linnaeus) Schinz & Thellung – F, G; ? *Lepturus filiformis* (Roth) Trinius]

Pascopyrum A. Löve 1980 (Wheatgrass)

A monotypic genus, perennial, of c. and w. North America. *Pascopyrum* is octoploid, derived from *Elymus* and *Leymus*. References: Barkworth in FNA (2007a).

* *Pascopyrum smithii* (Rydberg) A. Löve, Western Wheatgrass. Mt (GA): disturbed areas; rare. Reported for ne. GA (Rabun County) by Jones & Coile (1988), as *Agropyron smithii* Rydberg. It is also reported for TN and KY (Kartesz 1999). [= FNA, K; = *Elytrigia smithii* (Rydberg) Nevski – C; = *Agropyrum smithii* Rydberg – F, G, W]

Paspalum Linnaeus 1759 (Paspalum, Crown Grass, Beadgrass)
(by Alan S. Weakley & Richard J. LeBlond)

A genus of 300-400 species, of tropical and warm temperate regions. References: Allen & Hall in FNA (2003a); Banks (1966)=Z; Silveus (1942)=Y. Key based closely on FNA and on Banks (1966).

- 1 Spikelets solitary, not associated with rudimentary spikelets or naked pedicels.
- 2 Panicles usually composed of a terminal pair of branches, sometimes with 1 (-5) additional branches below the terminal pair.
- 3 Upper glumes pubescent on the back or margins.
 - 4 Spikelets 1.3-1.9 mm long; upper glumes pilose along the margins [*P. conjugatum*]
 - 4 Spikelets 2.4-3.2 mm long; upper glumes sparsely pubescent on the back *P. distichum*
- 3 Upper glumes glabrous.
 - 5 Spikelets elliptic, acute or acuminate at the tip *P. vaginatum*
 - 5 Spikelets ovate to broadly elliptic, obtuse to broadly acute at the tip.
 - 6 Spikelets 1.9-2.3 mm long; leaf blades flat *P. minus*
 - 6 Spikelets 2.5-4.0 mm long; leaf blades flat or longitudinally folded *P. notatum*
- 2 Panicles with 1-70 branches, if > 1, the branches arranged racemously.
 - 7 Panicle branches 7-70, the axes extending beyond the outermost spikelets; panicle branches disarticulating at maturity *P. fluitans*
 - 7 Panicle branches 1-6, terminating in a spikelet; panicle branches persistent.
 - 8 Upper florets olive to dark brown *P. scrobiculatum*
 - 8 Upper florets pale to tan.
 - 9 Axes of panicle branches not broadly winged, 0.6-1.3 mm wide.
 - 10 Spikelets orbicular, 2.8-3.2 mm wide *P. laeve* var. *circularae*
 - 10 Spikelets slightly longer than broad, 2.0-2.5 mm wide *P. laeve* var. *laeve*
 - 9 Axes of panicle branches broadly winged, 1.8-3.3 mm wide.
 - 11 Spikelets 3.2-4.0 mm long; upper lemmas with a few short hairs at their tips *P. acuminatum*
 - 11 Spikelets 1.7-2.1 mm long; upper lemmas glabrous *P. dissectum*
 - 1 Spikelets paired, or at least the second nonfunctional spikelet represented by a naked pedicel.
 - 12 Spikelets 1.0-1.3 mm long [*P. paniculatum*]
 - 12 Spikelets 1.3-4.1 mm long
 - 13 Margins of upper glumes and lower lemmas pilose.
 - 14 Panicle branches 2-7; spikelets 2.3-4.0 mm long *P. dilatatum*
 - 14 Panicle branches (4-) 10-30; spikelets 1.8-2.8 mm long *P. urvillei*
 - 13 Margins of upper glumes and lower lemmas neither ciliate-lacinate, winged, nor pilose (if pubescent, the hairs not pilose).
 - 15 Upper florets olive to dark brown.
 - 16 Panicle branches 10-28 (or more).
 - 17 Plants annual; axes of panicle branches broadly winged, the wings about as wide as the central portion; [common native] *P. boscianum*
 - 17 Plants perennial; axes of panicle branches narrowly winged, the wings narrower than the central portion; [rare exotics].
 - 18 Axes of panicle branches 0.5-1.2 mm wide; spikelets 1.1-1.8 mm wide *P. conspersum*
 - 18 Axes of the panicle branches 1.0-1.7 mm wide; spikelets 1.8-2.4 mm wide *P. virgatum*
 - 16 Panicle branches 1-10 (or to 28 in *P. boscianum*, keyed under both leads).
 - 19 Plants annual.
 - 20 Spikelets 1.3-1.8 mm wide, broadly elliptic to orbicular, glabrous; panicles with 1-10 (-28) branches, the axes 0.7-2.3 mm wide *P. boscianum*
 - 20 Spikelets 1.7-2.4 mm wide, broadly obovate, shortly pubescent; panicles with 1-5 branches, the axes 0.8-1.3 mm wide [*P. convexum*]
 - 19 Plants perennial.
 - 21 Plants caespitose, rhizomes poorly developed; culms 10-20 dm tall; panicle branches ascending, divaricate, or reflexed.
 - 22 Leaves 7-18 mm wide *P. conspersum*
 - 22 Leaves 2.5-4 mm wide *P. plicatulum*
 - 21 Plants not caespitose, rhizomatous; culms 1-15 dm tall; panicle branches ascending.
 - 23 Rhizomes long, evident *P. nicorae*
 - 23 Rhizomes short, indistinct *P. plicatulum*
 - 15 Upper florets white, stramineous, or golden brown.
 - 24 Lower lemmas with well-developed cross-ribs over the veins; upper glumes absent *P. malacophyllum*
 - 24 Lower lemmas not ribbed over the veins; upper glumes present.
 - 25 Panicles with 15-100 branches.
 - 26 Plants annual; upper glumes and lower lemmas rugose [*P. racemosum*]
 - 26 Plant perennial; upper glumes and lower lemmas smooth.
 - 27 Plant rhizomatous; panicle branch axes 0.9-1.2 mm wide; panicle branches often arcing *P. intermedium*
 - 27 Plant caespitose; panicle branch axes 0.3-0.6 mm wide; panicle branches straight.
 - 28 Panicle branches spreading to reflexed (rarely ascending); leaf blades 10-23 mm wide; axes of panicle branches 0.3-0.4 mm wide *P. coryphaeum*
 - 28 Panicle branches erect to ascending; leaf blades 4.9-6.1 mm wide; axes of panicle branches 0.5-0.6 mm wide [*P. quadrifarium*]
 - 25 Panicles with 1-15 branches.

- 29 Spikelets 1.3-2.5 mm long.
 - 30 Upper glumes (and usually also the lower lemmas) shortly pubescent.
 - 31 Lower glumes present [P. langei]
 - 31 Lower glumes absent.
 - 32 Panicles both terminal and axillary, the axillary panicles partially or completely enclosed by the subtending leaf sheath [see Key to *Paspalum setaceum* complex]
 - 32 Panicles all terminal *P. caespitosum*
 - 30 Upper glumes and lower lemmas glabrous.
 - 33 Panicles both terminal and axillary, the axillary panicles partially or completely enclosed by the subtending leaf sheath [see Key to *Paspalum setaceum* complex]
 - 33 Panicles all terminal.
 - 34 Upper panicle branches erect *P. monostachyum*
 - 34 Upper panicle branches spreading to ascending.
 - 35 Upper glumes and lower lemmas 5-veined *P. caespitosum*
 - 35 Upper glumes and lower lemmas 3-veined.
 - 36 Lower sheaths villous or hirsute *P. praecox* var. *curtisanum*
 - 36 Lower sheaths glabrous or sparsely papillose pubescent *P. praecox* var. *praecox*
- 29 Spikelets 2.5-4.1 mm long.
 - 37 Spikelet pairs barely if at all imbricate; lower glumes usually present *P. bifidum*
 - 37 Spikelet pairs imbricate; lower glumes absent or present.
 - 38 Upper glumes pubescent; lower lemmas usually pubescent.
 - 39 Lower glumes present [P. langei]
 - 39 Lower glumes absent *P. pubiflorum*
 - 38 Upper glumes glabrous; lower lemmas usually glabrous.
 - 40 Upper florets golden brown *P. floridanum*
 - 40 Upper florets pale to tan.
 - 41 Terminal panicle branches erect [P. monostachyum]
 - 41 Terminal panicle branches spreading to ascending.
 - 42 Plants decumbent, rooting at the lower nodes; spikelets obovate to elliptic *P. pubiflorum*
 - 42 Plants rhizomatous; spikelets orbicular to elliptic.
 - 43 Spikelets 2.9-4.1 mm long; 1.9-3.1 mm wide, suborbicular to elliptic; upper glumes 5-veined; leaf blades flat *P. floridanum*
 - 43 Spikelets 2.1-3.1 mm long, 2.0-2.8 mm wide, orbicular or nearly so; upper glumes 3-veined; leaf blades laterally folded.
 - 44 Lower sheaths villous or hirsute *P. praecox* var. *curtisanum*
 - 44 Lower sheaths glabrous or sparsely papillose pubescent *P. praecox* var. *praecox*

Key to *Paspalum setaceum* complex
(by Richard J. LeBlond)

- 1 Leaves glabrous to glabrate (if glabrate, also see var. *stramineum* in couplet 8).
 - 2 Blades crowded toward the base, often recurved, 3-8 mm wide; spikelets 1.4-1.9 mm long, usually glabrous *P. setaceum* var. *longepedunculatum*
 - 2 Blades not especially crowded toward the base, erect, ascending or spreading, 2-20 mm wide; spikelets 1.6-2.6 mm long, pubescent or glabrous.
 - 3 Blades 3-8 mm wide; spikelets 1.6-1.9 mm long, pubescent, subacute; [of GA and FL southward] *P. propinquum*
 - 3 Blades 2-20 mm wide; spikelets 1.7-2.6 mm long (if < 2.0 then larger leaves usually > 7 mm wide), glabrous or pubescent, rounded to blunt; [plants of FL northward and westward].
 - 4 Plants erect to spreading; blades 3-20 mm wide; spikelets 1.7-2.6 mm long; [of NJ to TX] *P. setaceum* var. *ciliatifolium*
 - 4 Plants stiffly erect; blades 2-6 mm wide; spikelets 2.0-2.6 mm long; [of GA and FL] *P. setaceum* var. *rigidifolium*
- 1 Leaves variously pubescent.
 - 5 Leaves villous to villous-hirsute, 2-10 mm wide; spikelets 1.3-1.9 mm long.
 - 6 Leaves villous, 2-7 mm wide, not especially crowded toward the base, erect to spreading; [widespread] *P. setaceum* var. *setaceum*
 - 6 Leaves villous-hirsute, 3-10 mm wide, crowded toward the base, recurved; [of n. FL south to Cuba] *P. setaceum* var. *villosissimum*
 - 5 Leaves puberulent, pilose, or hirsute, 3-15 mm wide; spikelets 1.6-2.5 mm long.
 - 7 Leaves puberulent at least distally on the adaxial surface (and often also pilose in var. *stramineum*); spikelets 1.6-2.2 mm long.
 - 8 Plants erect to spreading; leaves puberulent and often pilose to nearly glabrous except for the puberulent distal adaxial surface; spikelets glabrous to pubescent *P. setaceum* var. *stramineum*
 - 8 Plants spreading to prostrate; leaves densely puberulent; spikelets pubescent *P. setaceum* var. *psammophilum*
 - 7 Leaves pilose or hirsute but not puberulent; spikelets 1.8-2.5 mm long.
 - 9 Plants mostly erect; leaves pilose; spikelets usually glabrous; sterile lemma midnerve usually present *P. setaceum* var. *muhlenbergii*
 - 9 Plants mostly widely spreading; leaves hirsute; spikelets glabrous or pubescent; sterile lemma midnerve present or absent *P. setaceum* var. *supinum*

Paspalum acuminatum Raddi, Brook Paspalum, Canoe Grass. Pd (GA): wet areas, often disturbed; rare, possibly only adventive in our area. C. GA and ne. TX south to s. FL and s. TX, south through the New World tropics to s. South America. [= FNA, HC, K]

Paspalum bifidum (Bertoloni) Nash, Pitchfork Paspalum, Pitchfork Crown Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, SC): mesic to wet longleaf pine savannas and mesic swales in sandhills; uncommon (rare north of SC). August-October. Se.

VA south to s. FL, west to se. MO, se. OK, and e. TX. [= RAB, C, GW, HC, K, S, Y; > *P. bifidum* var. *bifidum* – F, G; > *P. bifidum* var. *projectum* Fernald – F, G]

Paspalum boscianum Flügge, Bull Paspalum. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, SC, VA): low fields, ditches; common (uncommon in VA). July-October. MD, KY, and TX south through tropical America. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Y]

Paspalum caespitosum Flügge. Cp (AL, FL): pinelands, hammocks; rare. S. AL and n. FL south to s. FL; West Indies, Mexico and Central America. [= FNA, GW, HC, K, S]

Paspalum conjugatum Bergius, Sour Paspalum. Cp (AL, FL, LA, MS): disturbed areas, forest edges; uncommon. Ne. FL, FL Panhandle, and s. AL west to e. TX, south in the New World tropics; Old World tropics. [= FNA, HC, K, S] {synonymy incomplete}

* ***Paspalum conspersum*** Schrad., Scattered Paspalum. Cp (GA): roadsides, other disturbed areas; rare, native of Mexico south to South America. [= FNA] {synonymy incomplete}

* ***Paspalum coryphaeum*** Trinius, Emperor Crown-grass. Cp (FL), Pd (NC): disturbed areas; rare, native of South America. [= FNA, K] {synonymy incomplete}

* ***Paspalum dilatatum*** Poiret, Dallis Grass. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): roadsides, fields, disturbed areas; common, native of tropical America. May-October. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Y]

Paspalum dissectum (Linnaeus) Linnaeus, Mudbank Crown Grass, Walter Paspalum. Cp (GA, NC, SC, VA), Pd (NC, SC), Mt (VA): mud flats, drawdown zones; uncommon (rare north of GA). September. NJ, IL, and KS south to s. FL and e. TX; Cuba. [= RAB, C, F, FNA, G, GW, HC, K, S, Y]

Paspalum distichum Linnaeus, Joint Paspalum, Knotgrass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): brackish and freshwater marshes; uncommon (rare in VA). June-August. NJ, KS, and WA south to s. FL, s. TX, s. CA and through the New World and Old World tropics. [= RAB, C, F, FNA, G, HC, K, S, W, Y; < *P. distichum* – GW (also see *P. vaginatum*); = *P. paspaloides* (Michaux) Scribner]

Paspalum floridanum Michaux, Florida Paspalum. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): wet forests, pine savannas; common (rare in Mountains). August-October. NJ, IL, and KS south to s. FL and e. TX. [= RAB, C, FNA, GW, K, W; > *P. floridanum* – G; > *P. difforme* Le Conte – G, HC, S, Y; > *P. floridanum* var. *floridanum* – F, HC, S, Y; > *P. floridanum* var. *glabratum* Engelmann ex Vasey – F, HC, S, Y; > *P. giganteum* Baldwin ex Vasey – HC, S, Y]

Paspalum fluitans (Elliott) Kunth, Water Paspalum, Horsetail Crown Grass. Cp (GA, NC, SC, VA), Pd (NC, VA): mucky soils in swamp forests; uncommon. October. MD, IL, and KS south to s. FL and s. TX, and south through tropical America to c. South America. [= RAB, C, F, G, HC, K; = *P. repens* P.J. Bergius – FNA, GW, S, Y]

* ***Paspalum intermedium*** Munro ex Morong. Cp (GA): drainage canals; rare, native of South America. Escaped in sc. GA (Tift County, where growing along drainage canals in Tifton) (Jones & Coile 1988). [= FNA, HC, K]

Paspalum laeve Michaux var. *circularae* (Nash) Stone. {FL?, GA, NC, VA}: {need additional herbarium work to fully determine range and abundance of varieties} June-August. [= F; < *P. laeve* – RAB, C, FNA, G, GW, K, W; = *P. circularae* Nash – HC, S, WV, Y]

Paspalum laeve Michaux var. *laeve*. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): forest edges and disturbed areas; common. {need additional herbarium work to fully determine range and abundance of varieties} June-August. Overall distribution of *P. laeve* s.l.: MA, NY, MI, and KS south to s. FL and e. TX. [< *P. laeve* – RAB, C, FNA, G, GW, K, W; > *P. laeve* var. *laeve* – F; > *P. laeve* var. *pilosum* Scribner – F; > *P. laeve* – HC, S, WV, Y; > *P. longipilum* Nash – HC, S, WV, Y]

Paspalum langei (E. Fournier) Nash, Rustyseed Paspalum. Cp (FL, LA): calcareous hardwood hammocks; rare. N. peninsular FL (Alachua County) and Panhandle FL (Jackson County) west to se. TX, and south through the New World tropics to South America. [= FNA, K; ? *P. botteri* (E. Fournier) Chase] {synonymy incomplete}

* ***Paspalum malacophyllum*** Trinius, Ribbed Paspalum. Cp (GA): disturbed areas; rare, native of Mexico to South America. [= FNA, HC]

Paspalum minus E. Fournier, Matted Paspalum. Cp (AL, FL, LA, MS): disturbed areas; uncommon. FL Panhandle (Escambia County) and s. AL west to e. TX. [= FNA, K] {synonymy incomplete}

Paspalum monostachyum Vasey, Gulf dune Paspalum. Cp (MS): coastal dunes, wet prairies; rare. S. FL peninsula; s. MS; sw. LA west to TX and Tamaulipas. [= FNA, HC, K, S] {synonymy incomplete}

* ***Paspalum nicorae*** Parodi, Brunswickgrass. Cp (GA): disturbed areas; rare, native of Brazil. Also reported for peninsular FL (Wunderlin & Hansen 2006). [= FNA, HC, K]

* ***Paspalum notatum*** Flügge, Bahia Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, SC, VA), Mt (GA): roadsides and disturbed areas, sometimes planted as a coarse turfgrass or a pasture grass; common (uncommon north of FL, rare in VA Piedmont, native of tropical America). June-October. [= FNA, G, GW, Y; > *P. notatum* var. *notatum* – HC, K; > *P. notatum* Flügge var. *saurae* Parodi – RAB, HC, K]

Paspalum plicatulum Michaux, Brownseed Paspalum. Cp (FL, GA, SC): pine savannas, fields; common (uncommon south of FL). May-July. Se. SC south to s. FL, west to s. TX, and south through tropical America to s. South America. [= RAB, FNA, GW, HC, K, S, Y]

Paspalum praecox Walter var. *curtisanum* (Steudel) Vasey, Curtis's Crown Grass. Cp (FL, GA, NC, SC, VA): pine savannas; rare (NC Watch List, VA Rare). June-October. NC south to s. FL, west to e. TX. The variety was named for the Rev. Moses Ashley Curtis (of Hillsborough, NC), not Allen Hiram Curtiss (of Jacksonville, FL); the correct spelling of the epithet is therefore "*curtisanum*." [= RAB, F, G; = *P. praecox* var. *curtissianum* – C, orthographic error; < *P. praecox* – FNA, GW, K; = *P. lentiferum* Lamarck – HC, S, Y]

Paspalum praecox Walter var. *praecox*, Early Crown Grass. Cp (FL, GA, NC, SC): pine savannas; common (rare north of FL) (NC Watch List). May-July. [= RAB, C, F, G; < *P. praecox* – FNA, GW, K; = *P. praecox* – HC, S, Y]

Paspalum propinquum Nash. Cp (FL, GA): {habitat}; uncommon. June-September. GA and FL. [= HC, S; < *P. setaceum* – K]

Paspalum pubiflorum Ruprecht var. *glabrum* Vasey, Hairseed Crown Grass. Mt, Pd (GA, NC, VA), Cp (FL, SC, VA): disturbed areas; uncommon (rare in FL) (NC Watch List). September-October. PA west to KS and CO, south to FL and s. TX and Mexico; Cuba. [= C, F, G, HC, S, Y; < *P. pubiflorum* – RAB, FNA, GW, K, W]

* *Paspalum scrobiculatum* Linnaeus, Indian Paspalum. Cp (GA): disturbed areas; rare, native of India. [= FNA, HC, K]

Paspalum setaceum Michaux var. *ciliatifolium* (Michaux) Vasey. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): dry open areas and woodlands, disturbed areas; common. June-September. S. NJ south to s. FL, west to e. TX, interior to s. WV, se. KY, e. TN, n. AL, n. MS, c. AR, and e. OK. [= FNA, Z; < *P. setaceum* – RAB, GW, K, W; < *P. setaceum* var. *ciliatifolium* – C (also see var. *longepedunculatum*); = *P. ciliatifolium* Michaux var. *ciliatifolium* – F, G; = *P. ciliatifolium* Michaux – HC, S, WV, Y]

Paspalum setaceum Michaux var. *longepedunculatum* (LeConte) A. Wood. Cp (FL, GA, NC, SC): pine flatwoods and pine savannas; rare. June-September. Se. NC south to s. FL, west to s. MS. [= F, FNA, Z; < *P. setaceum* – RAB, GW, K, W; < *P. setaceum* var. *ciliatifolium* – C; = *P. longepedunculatum* LeConte – G, HC, S, Y]

Paspalum setaceum Michaux var. *muhlenbergii* (Nash) Fernald. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): dry or moist soils; common. June-September. NH west to MI, c. IL, s. IA, and e. KS, south to n. FL, s. AL, s. MS, s. LA, and c. TX. [= C, FNA, Z; < *P. setaceum* – RAB, GW, K, W; > *P. setaceum* var. *calvescens* Fernald – F; > *P. ciliatifolium* Michaux var. *muhlenbergii* (Nash) Fernald – F; = *P. ciliatifolium* Michaux var. *muhlenbergii* (Nash) Fernald – G; = *P. pubescens* Muhlenberg ex Willdenow – HC, S, WV, Y]

Paspalum setaceum Michaux var. *psammophilum* (Nash) D. Banks. Cp? (VA?): maritime grasslands, sandy disturbed areas; rare. June-September. MA south to DC (VA?) in the Coastal Plain. [= C, FNA, Z; < *P. setaceum* – K; = *P. psammophilum* Nash – F, G, HC, Y]

Paspalum setaceum Michaux var. *rigidifolium* (Nash) D. Banks. Cp (FL, GA, NC?, SC?): sandhills; rare. June-September. Ne. GA, immediately adjacent to SC (and reported for NC by HC) south to s. FL; Cuba. [= FNA, Z; < *P. setaceum* – RAB, GW, K, W; = *P. rigidifolium* Nash – HC, S, Y]

Paspalum setaceum Michaux var. *setaceum*, Thin Paspalum. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): sandhills, savannas, dry soils; common (uncommon in Piedmont and Mountains). June-September. MA and CT south to s. FL, west to e. TX, inland to w. VA, s. WV, s. MO and AR; Cuba. [= C, FNA, Z; < *P. setaceum* – RAB, GW, K, W; > *P. setaceum* – G, HC, S, WV, Y; > *P. debile* Michaux – F, HC, S, Y; > *P. setaceum* var. *setaceum* – F]

Paspalum setaceum Michaux var. *stramineum* (Nash) D. Banks, Yellow Sand Paspalum. Cp (FL, GA, NC): dry sandy soils; rare. June-September. MI west to MT, south to LA, and NM; scattered eastwards, especially near the coast, perhaps at least in part as introductions [= C, FNA, Z; < *P. setaceum* – RAB, GW, K, W; = *P. ciliatifolium* Michaux var. *stramineum* (Nash) Fernald – F, G; = *P. stramineum* Nash – HC, Y]

Paspalum setaceum Michaux var. *supinum* (Bosc ex Poiret) Trinius. Cp (FL, GA, NC, SC, VA?): sandy soils, old fields; uncommon. June-September. E. NC (e. VA?) south to s. FL, west to s. MS. Also reported for the Coastal Plain of Virginia by Tatnall (1946); needing confirmation of the specimen identification. [= F, FNA, Z; < *P. setaceum* – RAB, GW, K, W; = *P. supinum* Bosc ex Poiret – HC, S]

Paspalum setaceum Michaux var. *villosissimum* (Nash) D. Banks. Cp (FL): sandy pine flatwoods and fields; uncommon. N. FL (very near GA) south to s. FL; Cuba. [= FNA, Z; < *P. setaceum* – GW, K; < *P. debile* Michaux – HC; = *P. villosissimum* Nash – S]

* *Paspalum urvillei* Steudel, Vasey Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): roadsides, fields, and disturbed areas; common, native of South America. May-July. [= RAB, C, F, FNA, G, GW, HC, K, S, Y]

Paspalum vaginatum Swartz, Sand Knotgrass, Seashore Crown Grass. Cp (FL, GA, NC, SC), Pd (NC): brackish marshes, rarely inland in disturbed places; rare. July. NC south to s. FL, west to s. TX, southward through the New World tropics; Old World tropics. [= RAB, FNA, HC, K, S, Y; < *P. distichum* – GW]

* *Paspalum virgatum* Linnaeus, Talquezal. Cp (GA): disturbed areas; rare, native of Mexico, Central America, and South America. [= FNA, K] {synonymy incomplete}

* *Paspalum convexum* Flüggé, Mexican Paspalum. Disturbed areas. MS, LA, and e. TX, native of tropical America. [= FNA, K] {synonymy incomplete}

* *Paspalum paniculatum* Linnaeus, Arrocillo. Disturbed areas, native of tropical America. Ec. MS and sw. FL. [= FNA, K] {synonymy incomplete}

* *Paspalum quadrifarium* Lamarck, Tussock Paspalum. Disturbed areas. S. MS. Native of South America. [= FNA] {synonymy incomplete}

* *Paspalum racemosum* Lamarck, Peruvian Paspalum. Disturbed areas. MS and other widely scattered localities in North America, native of n. South America. [= FNA, K] {synonymy incomplete}

Pennisetum L.C. Richard ex Persoon 1805

A genus of 80-130 species, perennials and annuals, mainly of the tropics and subtropics. References: Wipff in FNA (2003a). Key adapted from FNA.

- 1 Primary bristles (immediately subtending each spikelet) scabrous.
 - 2 Panicles with 9-16 fascicles per cm of length; plants 0.3-1.2 m tall.....*P. alopecuroides*
 - 2 Panicles with 30-40 fascicles per cm of length; plants 2-8 m tall.....*P. purpureum*
- 1 Primary bristles conspicuously long-ciliate.
 - 3 Spikelets 9-12 mm long.....*P. villosum*
 - 3 Spikelets 2.5-7 mm long.

- 4 Fascicles not disarticulating from the rachises; fascicles 33-160 per cm of inflorescence; panicles 4-200 cm long; leaves 7-70 mm wide. *P. glaucum*
- 4 Fascicles disarticulating from the rachises at maturity; fascicles 8-37 per cm of inflorescence; panicles 2-32 cm long; leaves 2-13 mm wide.
- 5 Spikelets 4.5-7 mm long; leaves 2-3.5 mm wide, folded or conduplicate and superficially appearing even narrower; rachis pubescent. *P. setaceum*
- 5 Spikelets 2.5-5.6 mm long; leaves 2-13 mm wide, flat; rachis scabrous.
- 6 Inner bristles fused for $< \frac{1}{4}$ of their length; many outer bristles exceeding the spikelets; terminal bristles 10.5-23 mm long, noticeably longer than the other bristles in the fascicle..... *P. ciliare*
- 6 Inner bristles fused for $\frac{1}{3}$ - $\frac{1}{2}$ of their length; outer bristles not exceeding the spikelets; terminal bristles 2.9-6.5 mm long, usually not noticeably exceeding the other bristles in the fascicle *P. setigerum*
- * *Pennisetum alopecuroides* (Linnaeus) Sprengel, Chinese Fountaingrass. Pd (VA), Mt (VA): disturbed areas; rare, native of e. Asia. [= FNA, HC, K]
- * *Pennisetum ciliare* (Linnaeus) Link, Buffelgrass. Cp (FL): disturbed areas; rare, native of Africa. Known in our area from ne. FL, s. AL, e. TN, and ec. MS. [= FNA, HC; = *P. ciliare* var. *ciliare* - K; = *Cenchrus ciliaris* Linnaeus]
- * *Pennisetum glaucum* (Linnaeus) R. Brown, Pearl Millet. Cp (FL), Mt (VA), Pd (VA), {GA, NC, SC}: disturbed areas; rare, native of the Old World. [= RAB, FNA, HC, K; ? *Chaetochloa lutescens* (Weigel) Stuntz - S; = *Setaria glauca* (Linnaeus) Palisot de Beauvois]
- * *Pennisetum purpureum* Schumacher, Elephant Grass, Napier Grass. Cp (FL): swamps, wet grasslands, disturbed areas; uncommon, native of Africa. Naturalized in FL north to the FL-GA border. [= FNA, HC, K]
- * *Pennisetum setaceum* (Forskål) Chiovenda, Tender Fountaingrass Cp (FL): disturbed areas; rare, native of e. Mediterranean Europe. Reported as an introduction in FL, TN, and KY (Wipff in FNA). [= FNA, HC, K]
- * *Pennisetum setigerum* (Vahl) Wipff. Cp (FL): disturbed areas; rare, native of Africa. Known in our area from ne. FL and ec. MS. [= FNA; = *P. ciliare* (Linnaeus) Link var. *setigerum* (Vahl) Leeke - K; = *Cenchrus setigerus* Vahl]
- * *Pennisetum villosum* R. Brown ex Fresenius, Feathertop. Reported as an introduction in GA (Kartesz 1999). [= C, FNA, HC, K; ? *Cenchrus longisetus* M.C. Johnston]

Phalaris Linnaeus 1753 (Canary-grass)

A genus of about 16-22 species, north temperate and South American. References: Barkworth in FNA (2007a); Tucker (1996)=Z.

- 1 Perennial, with scaly rhizomes; inflorescence **either** obviously paniculate, 7-25 cm long, with ascending to appressed branches, the main branches of the inflorescence apparent, the inflorescence outline thus appearing lobed, **or** densely spike-like, 1.5-15 cm long.
- 2 Glumes broadly winged; fertile lemmas ovate-lanceolate, densely pubescent..... *Ph. aquatica*
- 2 Glumes not winged; fertile lemmas narrowly lanceolate, glabrous to sparsely pubescent *Ph. arundinacea*
- 1 Annual, without rhizomes; inflorescence densely spike-like or almost capitate, 1-9 cm long, the branches not apparent, the inflorescence outline a single ovoid, ellipsoid, or lanceolate form.
- 3 Spikelets borne in clusters, the lower 4-7 spikelets in each cluster with a staminate terminal floret..... *Ph. paradoxa*
- 3 Spikelets borne singly; all spikelets with a bisexual terminal floret.
- 4 Keels of the glumes broadly winged (the wing ca. 1 mm wide); sterile florets 2.0-4.5 mm long *Ph. canariensis*
- 4 Keels of the glume narrowly winged (the wing < 0.5 mm wide); sterile florets 0.5-2.5 mm long.
- 5 Sterile floret 1 *Ph. minor*
- 5 Sterile florets 2.
- 6 Nerves of the glumes scabrous; panicle cylindrical in outline, 6-18 cm long; glumes 3.5-4.0 mm long; sterile florets 0.5-1.5 mm long *Ph. angusta*
- 6 Nerves of the glumes not scabrous; panicle narrowly ovate in outline, usually 2-6 cm long; glumes 5-6 mm long; sterile florets 1.5-2.5 mm long *Ph. caroliniana*
- * *Phalaris angusta* Nees ex Trinius. Cp (FL, GA, SC): waterfowl impoundments, marshes; uncommon, native of tropical America, perhaps native in LA and TX. [= GW, FNA, HC, K, Z]
- * *Phalaris aquatica* Linnaeus, Bulbous Canary-grass. Cp (NC, SC, VA): disturbed areas; rare, native of Europe. [= K, Z; ? *Ph. tuberosa* Linnaeus var. *stenoptera* (Hackel) Hitchcock - HC]
- *? *Phalaris arundinacea* Linnaeus, Reed Canary-grass, Ribbon Grass. Mt, Pd (NC, VA), Cp (VA): moist forests, moist disturbed areas, bogs; common (rare in Coastal Plain). June. Newfoundland west to AK, south to NC, TN, AR, NM, CA; Mexico; Eurasia. A variegated form, *Ph. arundinacea* forma *variegata* (Parn.) Druce, is cultivated for ornament, as Ribbon Grass. [= RAB, C, F, FNA, GW, K, S, W, WV, Z; > *Ph. arundinacea* var. *arundinacea* - G, HC; > *Ph. arundinacea* var. *picta* Linnaeus - G, HC]
- * *Phalaris canariensis* Linnaeus, Birdseed Grass, Canary-grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA): disturbed areas; rare, native of Mediterranean Europe. [= RAB, C, F, FNA, G, GW, HC, K, S, WV, Z]
- Phalaris caroliniana* Walter, Maygrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): ditches, roadsides, disturbed areas; uncommon. May-June. NC west to OR, south into Mexico, the original distribution now obscured. [= RAB, C, F, FNA, G, GW, HC, K, S, Z]
- * *Phalaris minor* Retzius, Lesser Canary Grass. Cp (SC): waste areas near wool-combing mills; rare, native of Mediterranean Europe. Also reported for other scattered states in e. North America, including peninsular FL (Kartesz 1999). [= FNA, HC, K] {synonymy incomplete}

* *Phalaris paradoxa* Linnaeus, Mediterranean Canary Grass, is reported for NC, MD, NJ, and PA (Barkworth in FNA 2007a; Kartesz 1999). [= FNA, K; > *Ph. paradoxa* var. *paradoxa* – HC; > *Ph. paradoxa* var. *praemorsa* (Lamarck) Coss. & Durieu – HC] {synonymy incomplete}

Phanopyrum (Rafinesque) Nash 1903 (Phanopyrum)

Circumscription of this genus is currently in flux. *Phanopyrum* is variously treated as a distinct genus or as a subgenus of *Panicum*. *Panicum verrucosum* perhaps belongs here as well. References: Crins (1991)=Z; Webster (1988)=Y; Freckmann & Lelong in FNA (2003a).

Phanopyrum gymnocarpon (Elliott) Nash, Swamp Phanopyrum, Savanna Phanopyrum. Cp (FL, GA, NC, SC, VA): swamps, seasonally flooded soils of cypress-gum sloughs, tidal (freshwater) cypress-gum swamps, disturbed wet soils, low woods, ditches, muddy banks of streams and lakes, sinks, floodplains, and marshes; uncommon (rare in NC and VA). August-October. Se. VA south to FL, west to TX and AR. [= K, Y; = *Panicum gymnocarpon* Elliott – RAB, FNA, GW, HC, S, Z]

Phleum Linnaeus 1753 (Timothy)

A genus of about 15 species, annuals and perennials, mainly native to Eurasia. References: Barkworth in FNA (2007a); Tucker (1996)=Z; Stace (1997)=Y. Key based on Stace (1997).

- 1 Spikelets 2.0-3.5 mm long, including the 0.2-1.0 (-1.2) mm long awns; panicle 3-6 mm wide; leaves 2-6 mm wide; ligule usually acute
 *Phl. pratense* ssp. *bertolonii*
- 1 Spikelets (3.5-) 4-5.5 mm long, including the (0.8-) 1.0-2.0 mm long awns; panicle 6-10 mm wide; leaves 3-9 mm wide; ligule usually obtuse
 *Phl. pratense* ssp. *pratense*

* *Phleum pratense* Linnaeus ssp. *bertolonii* (A.P. de Candolle) Bornm., Small Timothy. (NC) {included based on Fernald's report – corroboration and additional information needed} [= FNA; < *Ph. pratense* – RAB, C, G, HC, K, S, W, Z; = *Ph. pratense* var. *nodosum* (Linnaeus) Hudson – F; = *Ph. bertolonii* A.P. de Candolle – Y]

* *Phleum pratense* Linnaeus ssp. *pratense*, Timothy. Mt, Pd, Cp (GA, NC, SC, VA): meadows, pastures, roadsides, disturbed areas; common, native of Europe. June-October. The American common name comes from the name of the man who is believed to have introduced it into the United States in 1720, Timothy Hanson; in England, *Phleum* is called "cat's-tail." [= FNA; < *Ph. pratense* – RAB, C, G, HC, K, S, W, WV, Z; = *Ph. pratense* var. *pratense* – F; = *Ph. pratense* – Y]

* *Phleum subulatum* (Savi) Ascherson & Graebner, Italian Timothy. Waif on ballast, reported for MD and Philadelphia, PA. [= FNA, K, Y] {not keyed}

Phragmites Adanson 1763 (Common Reed)

A genus with one species and 3 or more infrataxa, nearly worldwide in distribution. References: Allred in FNA (2003a), revised in FNA (2007a); Saltonstall & Hauber (2007)=Y; Saltonstall, Peterson, & Soreng (2004)=Z; Saltonstall (2002). Key based on Z.

- 1 Ligules 1.0-1.7 mm long; lower glumes 3.0-6.5 mm long; upper glumes 5.5-11.0 mm long; lemmas 8.0-13.5 mm long; leaf sheaths caducous with age; culms exposed in the winter, smooth and shiny; [native south to WV and NC].....*Phr. australis* ssp. *americanus*
- 1 Ligules 0.4-0.9 mm long; lower glumes 2.5-5.0 mm long; upper glumes 4.5-7.5 mm long; lemmas 7.5-12.5 mm long; leaf sheaths not caducous with age; culms not exposed in the winter, **either** smooth and shiny **or** ridged and not shiny.
- 2 Culms ridged and not shiny; [introduced and weedy].....*Phr. australis* ssp. *australis*
- 2 Culms smooth and shiny; [native on the Gulf Coast, from FL westward]*Phr. australis* ssp. *berlandieri*

Phragmites australis (Cavanilles) Trinius ex Steudel ssp. *americanus* Saltonstall, P.M. Peterson, & Soreng. Cp (VA): freshwater marshes; rare. [= FNA, Y, Z; < *Ph. australis* – C, K; < *Ph. communis* Trinius – RAB, G, HC, WV; < *Ph. communis* var. *berlandieri* (Fournier) Fernald – F]

* *Phragmites australis* (Cavanilles) Trinius ex Steudel ssp. *australis*, Common Reed. Cp (GA, NC, SC, VA), Pd, Mt (NC, VA), Mt (VA): marshes, dredge-spoil deposit islands, ditches; common in outer Coastal Plain (rare elsewhere). September-October. Nearly worldwide in distribution. Fox, Godfrey, & Blomquist (1950) report its first collection in NC (in 1948). In most of our area, reed is of relatively recent introduction, reported from only nine counties in RAB, but now becoming a serious weed in coastal areas, where it aggressively colonizes freshwater and brackish marshes, excluding the native species. [= Y; = *Phragmites australis* (Cavanilles) Trinius ex Steudel var. *australis* – FNA, Z; < *Ph. australis* – C, GW, K; < *Ph. communis* Trinius – RAB, G, HC, WV; = *Ph. communis* var. *communis* – F; < *Ph. phragmites* (Linnaeus) Karsten – S]

Phragmites australis (Cavanilles) Trinius ex Steudel ssp. *berlandieri* (E. Fournier) C.F. Reed, Western Reed. Cp (FL?): marshes; uncommon. Sw. United States south into tropical America, east to Gulf Coast. September-October. [= Y; *Phragmites australis* (Cavanilles) Trinius ex Steudel var. *berlandieri* (E. Fournier) C.F. Reed – FNA, Z; < *Ph. australis* – C, GW, K; < *Ph. communis* Trinius – RAB, G, HC; < *Ph. communis* var. *berlandieri* (Fournier) Fernald – F; < *Ph. phragmites* (Linnaeus) Karsten – S]

Phyllostachys Siebold & Zuccarini 1843 (Bamboo)

A genus of about 50 (or more) species, native of mainly temperate e. Asia. References: Stapleton & Barkworth in FNA (2007a); Duncan & Duncan [in prep.] = Z; Judziewicz et al. (2000) = Y. Key adapted from Z.

- 1 Internodes at the base of principal culms dissimilar in length, the lowermost internode 1-12 cm long, the next 3 internodes distinctly longer, with nodal junctions mostly straight across *Ph. aurea*
- 1 Internodes at the base of principal culms all similar in length, mostly 4-8 cm, with nodal junctions oblique.
 - 2 Groove on internode (above the branch) yellowish-green, the rest of the culm dull greenish *Ph. aureosulcata*
 - 2 Groove on internode (above the branch) the same color as the rest of the culm.
 - 3 Internodes of principal culms densely velvety; outer surface of culm sheaths with abundant erect brown hairs; lowest internode of principal culms ca. 5 cm long; culms pale green at first, becoming gray with accumulated waxy powder in age *Ph. heterocycla*
 - 3 Internodes of principal culms glabrous or slightly hairy; outer surface of culm sheaths lacking erect brown hairs; lowest internode of principal culms ca. 8.5-12 cm long; culms various (see below, but not as described in first lead).
 - 4 Largest culms to 15 cm in diameter and 25 m tall; upper culm sheaths with auricles; outer surface of culm sheaths usually with a green streak down the middle, flanked by streaks of purple and buff; culms medium to dark glossy green at first (some cultivars golden yellow or yellow streaked), remaining so in age *Ph. bambusoides*
 - 4 Largest culms to 3.2 (-4) cm in diameter and 10 m tall (rarely taller); upper culm sheaths with or without auricles; outer surface of culm sheaths variously streaked, spotted, or mottled with brown or red (but not as above); culms pale green to green at first, usually becoming purple spotted, gray, or yellow in age.
 - 5 Lowest internode of principal culms ca. 8.5 cm long; culm sheaths with auricles, usually sparsely pubescent with erect, pale hairs, usually pinkish-brown at maturity, marked with numerous brown spots near the tip; culms green at first, usually becoming speckled and then more-or-less completely darkened with purplish spots (remaining green in some cultivars) *Ph. nigra*
 - 5 Lowest internode of principal culms ca. 12 cm long; culm sheaths lacking auricles, glabrous, usually green to buff at maturity, striped and marginally bordered with red; culms pale green at first, becoming gray to yellowish in age *Ph. rubromarginata*

* *Phyllostachys aurea* Carrière ex A. & C. Rivière, Golden Bamboo, Fishpole Bamboo. Cp (FL?, NC, SC, VA), Pd (NC, SC, VA), Mt (VA): suburban woodlands; uncommon (rare in VA Mountains), native of China and Japan. Not known to flower in our area. This is the usual large bamboo cultivated and naturalizing in our area, forming dense stands, up to 15 m tall. [= RAB, FNA, HC, K, Y, Z]

* *Phyllostachys aureosulcata* McClure, Yellowgroove Bamboo. Cp (SC), Pd (VA), {GA}: cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= K, WV, Y, Z]

* *Phyllostachys bambusoides* Siebold & Zuccarini, Giant Timber Bamboo. Cp, Pd, Mt (NC, SC): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= FNA, HC, K, Y, Z]

* *Phyllostachys heterocycla* (Carrière) S. Matsum, Moso Bamboo. Cp (SC): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= Y; ? *Ph. edulis* (Carrière) Houzeau de Lehaie – K; ? *Ph. pubescens* Mazel ex Houzeau de Lehaie – Z]

* *Phyllostachys nigra* (Loddiges) Munro, Black Bamboo. Pd (SC), Cp (VA): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China and Japan. [= K, WV, Y, Z]

* *Phyllostachys rubromarginata* McClure. Pd (SC): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= K, Y, Z]

* *Phyllostachys meyeri* McClure is reported as introduced in FL, NC, and SC (Kartesz 1999). {investigate} [= K] {not yet keyed}

A number of other species are sometimes cultivated in our area, and may be encountered. Bamboos are seriously under-represented in herbaria, since they rarely flower and are impractical to press. All of the species above should be anticipated in other physiographic provinces and states than those listed.

Piptatherum Palisot de Beauvois 1812

A genus of ca. 30 species, mainly Eurasian. References: Barkworth in FNA (2007a).

- 1 Glumes 2.5-3.5 mm long; lemmas glabrous; [alien] [*Ph. miliaceum*]
- 1 Glumes 3-8 mm long; lemmas evenly pubescent; [native].
 - 2 Leaves primarily cauline, the basal leaves < 2 cm long or merely represented by sheaths; leaves 8-16 mm wide; florets 4.5-7.5 mm long *P. racemosum*
 - 2 Leaves primarily basal, the basal leaves 4-45 cm long; leaves 0.5-1.8 mm wide; florets 2.2-4.5 mm long.
 - 3 Awns 5-15 mm long, persistent, 1-2× geniculate *P. canadense*
 - 3 Awns absent or < 2 mm long, caducous *P. pungens*

Piptatherum canadense (Poiret) Dorn, Mountain Ricegrass. Mt (WV): forests and woodlands; {abundance}. Newfoundland west to British Columbia, south to n. NY, MI, and WI; disjunct at Panther Knob, Pendleton County, WV. [= K; = *Oryzopsis canadensis* (Poiret) Torrey – C, F, G, HC, WV]

Piptatherum pungens (Torrey ex Sprengel) Dorn. Mt (WV): {habitat}; {abundance}. Labrador, Nunavut, and Yukon south to NJ, WV, IN, IL, IA, SD, and CO. = K; = *Oryzopsis pungens* (Torrey ex Sprengel) A.S. Hitchcock – C, F, G, HC]

Piptatherum racemosum Ricker ex A.S. Hitchcock, Blackseed Ricegrass. Mt (VA): calcareous woodlands and forests; common. Québec and Ontario west to ND, south to w. VA, e. TN (FNA), sc. KY, sc. MO, and e. NE. [= K; = *Oryzopsis racemosa* (Smith) Ricker ex A.S. Hitchcock – C, F, G, HC, W, WV]

* *Piptatherum miliaceum* (Linnaeus) Cosson, Smilo Grass. Reported as an introduced waif in MD (FNA; Kartesz 1999), NJ, and PA (Kartesz 1999). [= K; ? *Piptatherum miliaceum* ssp. *miliaceum* – FNA; = *Oryzopsis miliacea* (Linnaeus) Benth & Hooker – HC]

Piptochaetium J. Presl 1830 (Needlegrass)

A genus of about 27 species, of temperate North and South America, and montane tropical South America (Cialdella & Giussani 2002). References: Cialdella & Giussani (2002).

- 1 Florets 7-13 mm long; awns 40-75 mm long; [widespread in our area] ***P. avenaceum***
 1 Florets 13.5-22 mm long; awns 62-120 mm long; [endemic to FL] ***P. avenacioides***

Piptochaetium avenaceum (Linnaeus) Parodi, Eastern Needlegrass, Black Oatgrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): upland woodlands and forests, sometimes abundant or even dominant in xeric woodlands over granitic or mafic rocks in the Piedmont; common (uncommon in the Mountains). April-June. [= C, FNA, K; = *Stipa avenacea* Linnaeus – RAB, F, G, HC, S, W, WV]

Piptochaetium avenacioides (Nash) Valencia & Costas. Cp (FL): sandhills. Ne. FL (?) south to c. peninsular FL. [= FNA, K; = *Stipa avenacioides* Nash – HC; = *Stipa avenaceoides* Nash – S, orthographic variant]

Pleioblastus Nakai 1925

A genus of about 20 species, shrubs, native eof China and Japan.

* ***Pleioblastus simonii*** (Carrière) Nakai. Reported for GA (Kartesz 1999). {investigate} [= *Arundinaria simonii* (Carrière) A.& C. Rivière – K]

Poa Linnaeus 1753 (Bluegrass)

A genus of about 500 species, annuals and perennials, cosmopolitan. References: Soreng in FNA (2007a); Tucker (1996)=Z; Haines (2004)=Y; Soreng (1998).

- 1 Plants with well-developed rhizomes; perennial.
 2 Upper stems strongly flattened; [section *Tichopoa*] ***P. compressa***
 2 Upper stems terete or nearly so.
 3 Lower nodes of the panicle with 1-3 branches; [section *Madropoa*] ***P. cuspidata***
 3 Lower nodes of the panicle with 4 or more branches; [section *Poa*] ***P. pratensis***
 1 Plants lacking rhizomes; perennial or annual.
 4 Plants dioecious, the florets imperfect; lemmas and glumes scarious and silvery; [rare introduction in our area]; [section *Dioicopoa*]
 ***P. arachnifera***
 4 Plants not dioecious, the florets perfect; lemmas and glumes not notably scarious and silvery; [collectively common and widespread in our area].
 5 Lemmas not webbed at the base.
 6 Annual; culms decumbent to ascending and 1-3 dm long; inflorescence 2-8 cm long, the ascending branches bearing crowded spikelets above the middle; lemmas 2.4-3.4 mm long; [section *Micrantherae*] ***P. annua***
 6 Perennial; culms erect, 3-6 dm long; inflorescence 6-15 cm long, the widely spreading branches bearing a few spikelets near the end; lemmas 3.2-4.4 mm long; [section *Sylvestres*] ***P. autumnalis***
 5 Lemmas webbed at the base.
 7 Spikelets (most or all) modified into purplish bulblets; culm bulbous-thickened at ground level; [section *Arenariae*] ***P. bulbosa***
 7 Spikelets normal; culm not bulbous-thickened.
 8 Annual; [section *Homalopoa*] ***P. chapmaniana***
 8 Perennial.
 9 Marginal veins of the lemma glabrous.
 10 Nodes of the panicle mostly with 4-8 branches; lemmas pubescent or scabrous on the keel.
 11 Sheaths glabrous; ligule 0.7-2.2 (-3.0) mm long; [section *Sylvestres*] ***P. alsodes***
 11 Sheaths scabrous; ligule (2.5-) 3-7 mm long; [section *Pandemos*] ***P. trivialis***
 10 Nodes of the panicles mostly with 2 branches; lemmas glabrous on the keel; [section *Sylvestres*].
 12 Anthers 0.6-0.9 (-1.0) mm long; lemmas broad-acute, obtuse or truncate at the apex, the keel and lateral margins of the lemma forming an apical angle of 42-82 degrees, firm at the tip, the scarious tip absent or up to 0.25 mm long
 ***P. languida***
 12 Anthers 0.9-1.5 mm long; lemmas acute to acuminate at the apex, the keel and lateral margins of the lemma forming an apical angle of 10-47 degrees, pliable at the tip, the scarious tip prominent and 0.25-0.5 mm long ***P. saltuensis***
 9 Marginal veins of the lemma pubescent, at least basally.
 13 Lower nodes of the panicles mostly with (1-) 2-3 branches.

- 14 Ligule truncate, 0-1 mm long; first glume 1.7-2.2 mm long, second glume 2.0-2.8 mm long; anthers 0.5-0.7 mm long; [section *Oreinos*] *P. paludigena*
- 14 Ligule rounded-ovate, 1-2 mm long; first glume 2.5-3.5 mm long, second glume 3.0-3.8 mm long; anthers 1.1-1.4 mm long; [section *Sylvestres*] *P. wolfii*
- 13 Lower nodes of the panicles mostly with (4-) 5 or more branches.
- 15 Lemmas 5-veined (intermediate veins well-developed); ligule ca. 1 mm long; [section *Sylvestres*] *P. sylvestris*
- 15 Lemmas 3-veined (intermediate veins obscure); ligule either (2-) 3-5 mm long or 0.2-1 (-1.5) mm long.
- 16 Ligule 0.2-1 (-1.5) mm long, truncate; culms 4-8 dm tall; anthers 1.2-1.6 mm long; [section *Stenopoa*] *P. nemoralis*
- 16 Ligule (2-) 3-5 mm long, ovate-triangular; culms 5-15 dm tall; anthers 0.8-1.2 mm long; [section *Pandemos*] *P. palustris*

Poa alsodes A. Gray, Woodland Bluegrass. Mt (NC, VA), Pd (NC, VA): rich forests; uncommon (rare in Piedmont). May-June. Nova Scotia west to SD, south to NC and IL; also in w. United States. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

* *Poa annua* Linnaeus, Speargrass, Six-weeks Grass, Annual Bluegrass. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, native of Eurasia. April-May. [= RAB, C, F, FNA, G, GW, HC, K, W, WV, Z]

* *Poa arachnifera* Torrey, Texas Bluegrass. Pd (GA, NC, SC): disturbed areas; rare, native of sc. United States. April. [= RAB, FNA, HC, K]

Poa autumnalis Muhlenberg ex Elliott. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): moist or dry nutrient-rich forests; common (uncommon in VA Mountains, rare in FL). April-May. NJ west to MI, south to FL and TX. [= RAB, C, F, FNA, G, GW, HC, K, W, Z]

* *Poa bulbosa* Linnaeus ssp. *vivipara*, Bulbous Bluegrass. Cp (NC, VA), Pd (GA, NC, VA): lawns; rare, native of Europe. April-May. [= FNA; < *P. bulbosa* – RAB, C, F, G, HC, K, WV, Z]

Poa chapmaniana Scribner. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): low fields, roadsides, disturbed areas; common (rare in FL and VA). April-May. DE west to IA, south to FL and LA. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

* *Poa compressa* Linnaeus, Canada Bluegrass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): fields, roadsides, disturbed areas; common, native of Europe. May-August. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

Poa cuspidata Nuttall. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (GA, NC, VA): moist forests; common. March-April. NJ west to s. IN, south to sw. GA and c. AL. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

Poa languida Hitchcock, Drooping Bluegrass. Mt (VA): ultramafic outcrop woodlands, barrens, and glades; rare. April-May. VT and MA west to MN, south to PA, w. VA, KY, and IA. See comments under *P. saltuensis*. [= C, F, G, HC, W; = *P. saltuensis* Fernald & Wiegand ssp. *languida* (Hitchcock) A. Haines – FNA, Y; < *P. saltuensis* – K]

* *Poa nemoralis* Linnaeus, Wood Bluegrass. Mt (NC, VA), Pd (VA): sandy creek bottoms; rare, native of Europe. [= C, F, FNA, G, HC; ? *P. nemoralis* ssp. *nemoralis* – K]

Poa paludigena Fernald & Wiegand, Bog Bluegrass. Mt (NC, VA): mountain bogs, especially in deep shade under shrubs; rare. April-May. NY west to MN, south to PA, w. NC, and IL. This species withers and disintegrates shortly after flowering; its ephemeral habit may be responsible for its being overlooked in our area for many years. [= C, F, FNA, G, HC, K]

Poa palustris Linnaeus, Fowl Bluegrass, Fowl Meadow-grass. Mt (NC, SC, VA), Pd (VA): meadows, moist areas; rare. June-July. Circumboreal, south in North America to VA, w. NC, MO, and NM. Some populations, especially in our region, may represent introductions. [= RAB, C, F, FNA, G, HC, K, W, WV, Z]

* *Poa pratensis* Linnaeus ssp. *pratensis*, Kentucky Bluegrass, Junegrass, Speargrass. Mt, Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA): lawns, roadsides, disturbed areas; common, native of Europe. April-August. [= FNA, K; < *P. pratensis* – RAB, C, F, G, HC, W, WV, Z]

Poa saltuensis Fernald & Wiegand, Old-pasture Bluegrass. Mt (NC, VA): northern hardwood forests, ultramafic outcrop woodlands, barrens, and glades; rare. April-May. Newfoundland west to MN, south to PA, w. VA, and w. NC. The NC occurrences (on serpentinized olivine barrens) reported as *P. languida* are actually *P. saltuensis*. The taxonomic distinctions between *P. saltuensis* and *P. languida* have been controversial; Haines (2004) provides a detailed and valuable discussion. [= C, F, G, HC, W, WV; < *P. languida* – RAB, Z, misidentification; = *P. saltuensis* var. *saltuensis* – F; = *P. saltuensis* ssp. *saltuensis* – FNA, Y; < *P. saltuensis* – K (also see *P. languida*)]

Poa sylvestris A. Gray, Forest Bluegrass. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist forests; common (rare in FL). April-May. NY west to MN and SD, south to FL and TX. [= RAB, C, F, FNA, G, GW, HC, K, W, WV, Z]

* *Poa trivialis* Linnaeus ssp. *trivialis*, Rough Bluegrass. Mt, Pd (NC, VA), Cp (VA), {GA}: moist forests, disturbed areas, bottomlands; common (rare in VA Coastal Plain), native of Europe. April-June. [= FNA; < *P. trivialis* – RAB, C, F, G, GW, HC, K, W, WV, Z]

Poa wolfii Scribner. Mt (NC): moist rich forests; rare. OH west to MN, south to c. TN, n. AR, and NE; disjunct eastward w. NC. The NC occurrence is based on material from Great Smoky Mountains National Forest (Haywood County) (K. Langdon, pers. comm., 2006). The alleged VA occurrences are in error. [= C, F, G, HC, K, W, Z]

* *Poa infirma* Kunth. Cp (SC): disturbed areas; rare, native of South America. {investigate} [= FNA, K] {not yet keyed; synonymy incomplete}

Polygonum Desfontaines 1798

A genus of about 18 species, annuals and perennials, of tropical and warm temperate regions. References: Barkworth in FNA (2007a); Tucker (1996)=Z.

- 1 Inflorescence verticillate, the rachis visible between the verticils; glumes 1.6-2.3 mm long, without awns; spikelets disarticulating near base of pedicel; stoloniferous perennial *P. viridis*
- 1 Inflorescence dense, cylindrical, and spikelike; glumes 2-3 mm long, with prominent awns 3.5-7 mm long; spikelets disarticulating near apex of pedicel; annual.
- 2 Glumes deeply lobed, the awn borne between the lobes; glume ciliate-fringed; lemma 0.4-0.7 mm long, awnless..... *P. maritimus* var. *maritimus*
- 2 Glumes slightly notched at the tip, the awn borne from near the tip; glume not ciliate-margined; lemma 0.7-1.1 mm long, awned..... *P. monspeliensis*

* *Polypogon maritimus* Willdenow var. *maritimus*, Mediterranean Beardgrass. Cp (GA, SC): brackish marshes; rare, native of Mediterranean Europe. *P. maritimus* Willdenow is reported as introduced to GA (Small 1933). [= FNA; < *P. maritimus* – HC, K, S, Z]

* *Polypogon monspeliensis* (Linnaeus) Desfontaines, Rabbitfoot Grass, Beardgrass, Annual Beardgrass. Cp (FL, GA, NC, SC, VA), Pd (GA): brackish marshes, disturbed areas; uncommon, native of s. Europe to w. Asia. May-July. [= RAB, C, F, FNA, G, GW, HC, K, S, Z]

* *Polypogon viridis* (Gouan) Breistr., Water Bent-grass. Cp (SC): introduced on ballast around old ports, probably not persistent; rare, native of the Old World. Distinguished from *Agrostis* in having the spikelet falling as a whole, disarticulating below the glumes. [= FNA, K, Z; > *Agrostis viridis* Gouan – C; > *Agrostis verticillata* Villars – F; > *Agrostis semiverticillata* (Forskål) C. Christensen – G, HC]

Pseudosasa Makino ex Nakai 1925 (Arrow Bamboo)

A genus of about 36 species, native of China, Japan, and Korea. References: Stapleton in FNA (2007a); Duncan & Duncan [in prep.] = Z; Judziewicz et al. (2000) = Y. Key adapted from Z.

* *Pseudosasa japonica* (Siebold & Zuccarini ex Steudel) Makino ex Nakai, Arrow Bamboo. Cp (FL, VA): cultivated as an ornamental, persistent or spreading from plantings; rare, native of Japan. [= FNA, HC, K, Y, Z; = *Sasa japonica* (Siebold & Zuccarini ex Steudel) Makino]

Puccinellia Parlatores 1848 (Alkali Grass, Goosegrass)

A genus of about 80-120 species, north temperate. References: Davis & Consaul in FNA (2007a).

- 1 Lemmas 3.0-4.5 mm long; spikelets 5-11-flowered [*P. maritima*]
- 1 Lemmas 1.5-2.5 mm long; spikelets 2-6-flowered.
- 2 Inflorescence diffuse, the lower branches with spikelets restricted to the distal portions; lower inflorescence branches spreading horizontal to deflexed at maturity; lemma 1.5-2.1 mm long, the midnerve not reaching the apex *P. distans*
- 2 Inflorescence compact, the lower branches bearing spikelets nearly to the base; lower inflorescence branches ascending at maturity; lemma 2.0-2.5 mm long, the midnerve reaching the apex, and often excurrent as a mucro *P. fasciculata*

* *Puccinellia distans* (Jacquin) Parlatores, European Alkali Grass, Goosegrass. Cp (VA): coastal sands; rare, native of Eurasia. [= *P. distans* – C, G, HC; > *P. distans* var. *distans* – F; > *P. distans* ssp. *distans* – K]

*? *Puccinellia fasciculata* (Torrey) Bicknell, Eastern Alkali Grass, Saltmarsh Goosegrass. Cp (VA): salt or brackish marshes; rare. Nova Scotia south to VA; Europe; and in sw. United States. The native or introduced status of this species in ne. North America is controversial. [= C, F, FNA, G, HC, K]

* *Puccinellia maritima* (Hudson) Parlatores, Seaside Alkali Grass, Seaside Speargrass. Salt marshes and ballast near ports. Introduced south to se. PA (Philadelphia), NJ (Camden), and DE, especially on ballast. [= C, F, FNA, G, HC; > *P. americana* Sorenson – K] {synonymy incomplete}

Reimarochloa A.S. Hitchcock 1909

A genus of about 4 species, of the New World tropics. References: Barkworth in FNA (2003a).

Reimarochloa oligostachya (Munro ex Benth) A.S. Hitchcock. Cp (FL): moist hammocks, wet grasslands; rare. Ne. FL (Duval County) and s. AL south to s. FL; Cuba. [= HC, K]

Ripidium Trinius 1820 (Ravenna-grass)

References: Hodkinson et al. (2002).

* *Ripidium ravennae* (Linnaeus) Trinius, Ravenna-grass, Plume-grass. Cp (FL, GA): cultivated as an ornamental and rarely escaping or persisting; rare, native of s. Europe. In sw. GA, TN, and MD (Kartesz 1999), DC (Steury 2004a), FL (Wunderlin &

Hansen 2006). [= *Saccharum ravennae* (Linnaeus) Linnaeus – FNA, K; = *Erianthus ravennae* (Linnaeus) Palisot de Beauvois – F; > *Erianthus ravennae* var. *ravennae* – HC; > *Erianthus ravennae* var. *purpurascens* (Anderss.) Hackel – HC]

***Rostraria* Trinius 1820**

A genus of about 10 species, native of the Mediterranean region and w. Asia. References: Standley in FNA (2007a).

* ***Rostraria cristata*** (Linnaeus) Tzvelev. Cp (FL, SC): waste areas near wool-combing mills, other disturbed areas; rare, introduced, native of Europe. It also occurs at scattered other sites in eastern United States, such as on ballast in se. PA (Rhoads & Klein 1993), and reported for MD, AL, and FL (Kartesz 1999). Not keyed. [= K; > *R. cristata* var. *cristata* – FNA; > *R. cristata* var. *glabriflora* (Trautvetter) Doğan – FNA; = *Lophochloa cristata* (Linnaeus) Hylander; = *Koeleria phleoides* (Villars) Persoon – HC; ? *Koeleria gerardii* (Villars) Shinnery]

***Rottboellia* Linnaeus f. 1782 (Itch-grass)**

A genus of about 5 species, native to tropical Asia and Africa. References: Wipff in FNA (2003a); Wipff & Rector (1993)=Z.

* ***Rottboellia cochinchinensis*** (Loureiro) Clayton, Itch-grass. Cp (FL, GA, NC, VA): disturbed ground; uncommon (rare north of FL), native of tropical Asia. August-October. This grass, considered a noxious weed, was found in at least 13 GA counties by 1985 (Duncan 1985), on a farm in Robeson County, NC in 1984, and in cornfields in Westmoreland County, VA in 2007. [= FNA, K, Z; = *Rottboellia exaltata* Linnaeus f. – HC; = *Manisuris exaltata* (Linnaeus f.) Kuntze – S]

***Saccharum* Linnaeus 1753 (Plume Grass)**

A genus of uncertain circumscription at this time. Clayton & Renvoize (1986) pointed out that the "traditional division [of *Saccharum*] into awned (*Erianthus*) and awnless species seems wholly artificial;" Hodkinson et al. (2002) developed molecular evidence which suggests that our species are not congeneric with *Saccharum*, however. Further study is needed, but likely our native southeastern species will be merged into *Miscanthidium* Stapf, while the introduced *S. ravennae* will be placed in the genus *Ripidium* Trinius (Hodkinson et al. 2002). Sugarcane (*Saccharum officinarum* Linnaeus, *S. sinense* Roxburgh, *S. barberi* Jeswiet, *S. spontaneum* Linnaeus, and cultivars and hybrids derived from those four species) is cultivated further south, notably in FL and LA. References: Webster in FNA (2003a); Webster & Shaw (1995)=Z; Gandhi & Dutton (1993); Hodkinson et al. (2002). [also see *Ripidium*]

- 1 Lowermost inflorescence node densely hairy; callus hairs (ring of hairs beneath the spikelet) (7-) 9-25 mm long, equal to or longer than the spikelet; stem appressed-pubescent below the inflorescence, on the internodes as well as the nodes.
- 2 Lemma awn flattened and spirally twisted at base; callus hairs 9-14 mm long, silvery or tinged with purple; leaves usually glabrous on the upper surface at maturity; [of moist to dry sites, rarely in wetlands] ***S. alopecuroides***
- 2 Lemma awn nearly terete, straight or slightly flexuous; callus hairs (7-) 15-20 (-25) mm long, tawny or brown; leaves usually pilose on the upper surface at maturity; [of moist to wet sites, rarely in uplands]..... ***S. giganteum***
- 1 Lowermost inflorescence node glabrous; callus hairs (ring of hairs beneath the spikelet) 0-6.5 mm long, shorter than or equal to the spikelet (or absent in *S. brevibarbe*); stem glabrous below the inflorescence, except sometimes on the nodes.
- 3 Callus hairs (ring of hairs beneath the spikelet) absent, or of few hairs 0-2 mm long (much shorter than the spikelet); panicle branches closely appressed, the panicle usually 1-3 cm broad; panicle branches glabrous ***S. baldwinii***
- 3 Callus hairs (ring of hairs beneath the spikelet) present, dense, 3-6.5 mm long (from about half as long to nearly as long as the spikelet); panicle branches ascending, the panicle usually 4-10 cm broad; panicle branches pubescent.
- 4 Awn of the lemma of the upper floret terete at the base, and not spiraled; spikelets dark brown; spikelet pair dissimilar in size, the lemma of the upper floret 0.7-0.8× as long as the lemma of the lower floret; lemma of the lower floret typically 3-nerved..... ***S. coarctatum***
- 4 Awn of the lemma of the upper floret flattened at the base, either spiraled or not; spikelets straw-colored or purplish; spikelet pair homomorphic, the upper lemma 0.9-1.0× as long as the lower lemma; lemma of the lower floret not distinctly nerved.
- 5 Awn of the lemma of the upper floret not basally spiraled, 10-18 mm long; lemma of the upper floret entire ***S. brevibarbe* var. *brevibarbe***
- 5 Awn of the lemma of the upper floret basally spiraled, 15-22 mm long; lemma of the upper floret bifid, the tooth on either side of the lemma 2.0-2.5 mm long..... ***S. brevibarbe* var. *contortum***

Saccharum alopecuroides (Linnaeus) Nuttall, Silver Plume Grass. Pd (Ga, NC, SC, VA), Mt (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): fields, roadsides, woodland borders; common (rare in Mountains). October. NJ west to IN, IL, MO, and OK, south to FL and TX. [= FNA; = *Saccharum alopecuroides* (Linnaeus) Nuttall – Z, orthographic variant; = *Erianthus alopecuroides* (Linnaeus) Elliott – RAB, C, F, G, GW, HC, W, WV; = *Saccharum alopecuroides* – K, orthographic variant; = *Erianthus divaricatus* (Linnaeus) A.S. Hitchcock – S; = *Miscanthidium species 1*]

Saccharum baldwinii Sprengel, Narrow Plume Grass. Cp (FL, GA, NC, SC, VA): marshes, clay-based Carolina bays, ditches; common. July-October. E. VA south to FL, west to TX, AR, scattered northward inland to TN and MO. [= FNA, K, Z; = *Erianthus strictus* Elliott – RAB, C, F, G, GW, HC, S; = *Miscanthidium species 2*]

Saccharum brevibarbe (Michaux) Persoon var. *brevibarbe*, Short-bearded Plume Grass. Cp (NC): marshes, ditches; rare. September-October. MS, AL, and TN west to TX, AR, and OK; disjunct in e. NC. [= FNA, K, Z; < *Erianthus brevibarbis*

Michaux – RAB, C, G, GW, S (also see *S. coarctatum*); = *E. brevibarbis* – F; >< *Erianthus coarctatus* Fernald var. *coarctatus* – HC; >< *Erianthus coarctatus* var. *elliottianus* Fernald – HC; = **Miscanthidium species 3**]

Saccharum brevibarbe (Michaux) Persoon var. ***contortum*** (Elliott) R. Webster, Bent-awn Plume Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): open woodlands and forests, woodland borders; common (rare in Mountains, rare in FL and VA). Late July-October. DE and MD south to panhandle FL, west to TX and AR, with scattered occurrences north to TN. [= FNA, K, Z; = *Erianthus contortus* Elliott – RAB, C, F, G, GW, HC, S, W; = *Saccharum contortum* (Elliott) Nuttall; = *Erianthus brevibarbis* Michaux var. *contortus* (Elliott) D.B. Ward; = **Miscanthidium species 4**]

Saccharum coarctatum (Fernald) R.D. Webster, Brown Plume Grass. Cp (FL, GA, NC, SC, VA): marshes, ditches, clay-based Carolina bays, swamps; common (rare in VA). September-October. DE and MD south to FL, west to TX (Brown & Marcus 1998). [= FNA, K, Z; < *Erianthus brevibarbis* Michaux – RAB, C, G, GW, S; >< *Erianthus coarctatus* Fernald – F, HC; >< *Erianthus coarctatus* var. *coarctatus* – HC; >< *Erianthus coarctatus* var. *elliottianus* Fernald – HC; = **Miscanthidium species 5**]

Saccharum giganteum (Walter) Persoon, Sugarcane Plume Grass, Giant Plume Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): marshes, ditches; common (rare in Mountains). September-October. NY south to FL, west to se. TX and AR; inland in TN and KY. [= FNA, K, Z; = *Erianthus giganteus* (Walter) Palisot de Beauvois – RAB, C, G, GW, HC, W; > *Erianthus giganteus* var. *giganteus* – F; > *Erianthus giganteus* var. *compactus* (Nash) Fernald – F; = *Erianthus saccharoides* Michaux – S; = **Miscanthidium species 6**]

Sacciolepis Nash 1901 (Cupscale)

A genus of about 30 species, primarily in the tropics and subtropics. References: Wipff in FNA (2003a).

- 1 Annual, caespitose; spikelets 2.5-3.5 mm long; [rare alien] ***S. indica***
 1 Perennial, from creeping stolons; spikelets (3-) 4-5 mm long; [common native]..... ***S. striata***

* ***Sacciolepis indica*** (Linnaeus) Chase, Indian Cupscale. Cp (FL, GA, NC, SC): low fields, ditches; uncommon (rare north of FL); native of India. October. [= RAB, FNA, GW, HC, K]

Sacciolepis striata (Linnaeus) Nash, American Cupscale. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): marshes, interdune swales, ditches, swamps; common (rare in Piedmont and Mountains). July-October. S. NJ south to FL, west to e. TX and OK, nearly limited to the Coastal Plain, but occasionally inland as in w. NC and TN; also native in the West Indies and n. South America. [= RAB, C, F, FNA, G, GW, HC, K, W]

Sasa Makino & Shibata 1901

* ***Sasa palmata*** E.G. Camus, Broadleaf Bamboo. Reported for TN (Kartesz 1999; USDA NRCS 2007). [= K]

Schedonorus Palisot de Beauvois 1812 (Meadow Fescue, Tall Fescue)

A genus of perennials, native of Eurasia. The correct generic placement of the introduced species *Schedonorus arundinaceus* (= *Festuca elatior*; = *Festuca arundinacea*; = *Lolium arundinaceum*) and *Sch. pratense* has been disputed. The traditional placement in *Festuca* has been defended by Aiken et al. (1997); Darbyshire (1993) transferred them to *Lolium*; and Soreng & Terrell (1998) place them in the genus *Schedonorus*. References: Darbyshire in FNA (2007a); Darbyshire (1993)=X; Aiken & Darbyshire (1990)=Y; Tucker (1996)=Z; Soreng & Terrell (1998)=V. Key based in part on C and Y.

- 1 Auricles ciliate (sometimes only very sparsely so – check several at 10-20× magnification); spikelets with 3-6 (-9) florets; old sheaths pale straw-colored, often remaining intact; internodes of the rachilla antrorsely scabrous..... ***Sch. arundinaceus***
 1 Auricles glabrous; spikelets with (2-) 4-10 (-12) florets; old sheaths brown, decaying to fibers; internodes of the rachilla glabrous (smooth) or nearly so..... ***Sch. pratensis***

* ***Schedonorus arundinaceus*** (Schreber) Dumortier, Tall Fescue, Alta Fescue. Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, roadsides, pastures, disturbed areas; common (uncommon in FL), native of Eurasia. May-July. [= FNA, V; < *Festuca elatior* Linnaeus – RAB, F, S, W, WV, misapplied; = *Festuca arundinacea* Schreber – HC, Y; = *Festuca elatior* Linnaeus – C; = *Festuca elatior* var. *arundinacea* (Schreber) Wimmer – G; < *Festuca pratensis* Hudson – GW; = *Lolium arundinaceum* (Schreber) Darbyshire – K, X, Z; ? *Schedonorus phoenix* (Scopoli) Holub]

* ***Schedonorus pratensis*** (Hudson) Palisot de Beauvois, Meadow Fescue. Mt (VA): fields, roadsides, pastures, disturbed areas; rare, native of Eurasia. May-July. [= FNA, V; < *Festuca elatior* Linnaeus – F, S, W, WV, misapplied; = *Festuca pratensis* Hudson – C, Y; = *Festuca elatior* var. *pratensis* (Hudson) A. Gray – G; < *Festuca pratensis* Hudson – GW; = *Festuca elatior* – HC, misapplied; = *Lolium pratense* (Hudson) Darbyshire – K, X, Z]

Schizachne Hackel 1909 (False Melic)

A monotypic genus, circumboreal in Asia and North America. References: Cayouette & Darbyshire in FNA (2007a).

Schizachne purpurascens (Torrey) Swallen, Purple Oatgrass, False Melic. Mt (VA): moist, rocky northern hardwood and spruce forests; rare. Newfoundland west to AK, south to MD, w. VA, WV, KY, IL, NM, and Mexico; also in ne. Asia. May-July. [= F, FNA, G, HC, K, WV; > *S. purpurascens* var. *purpurascens* – C]

Schizachyrium Nees 1829 (Little Bluestem)

A genus of about 60 species, widespread in tropical, subtropical, and warm temperate regions of the World. References: Wipff (1996a)=Z; Gandhi (1989)=Y; Wipff in FNA (2003a). Key based in part on Wipff in FNA (2003a).

- 1 Leaf blades 0.5-1.5 mm wide, with a lighter-colored zone in the center of the upper surface; sessile spikelet ca. 4 mm long.....*Sch. tenerum*
- 1 Leaf blades >1.5 mm wide, lacking a distinct lighter zone on the upper surface; sessile spikelet 5-11 mm long.
 - 2 First glume of sessile spikelet pubescent.....*Sch. sanguineum* var. *hirtiflorum*
 - 2 First glume of sessile spikelet glabrous.
 - 3 Plants rhizomatous, with internodes 6 mm long or longer; sessile spikelet 5-7 mm long.....*Sch. scoparium* var. *stoloniferum*
 - 3 Plants tufted, rhizome internodes absent or < 3 mm long, the stem sometimes decumbent at the base and rooting at the lower nodes (appearing nearly rhizomatous); sessile spikelet 6-10 mm long.
 - 4 Leaf sheaths broad and strongly keeled, hairs of the raceme internodes 2.5-6 mm long; stems decumbent at base, rooting at the lower nodes
 - 5 Ligules 1.5-2 mm long; pedicellate spikelets 1.5-5 mm long; [of the Atlantic Coast].....*Sch. littorale*
 - 5 Ligules 0.5-1 mm long; pedicellate spikelets 4.5-8.5 mm long; [of the Gulf Coast].....*Sch. maritimum*
 - 4 Leaf sheaths rounded or weakly keeled; hairs of the raceme internodes 1-3 (-4) mm long; stems erect, not rooting at the lower nodes
 - 6 Pedicellate spikelets of the proximal spikelet units on each raceme staminate, 5-10 mm long, with a lemma, the pedicellate spikelets of the distal units usually smaller (1-4 mm long) and sterile; sheaths and blades densely tomentose to glabrate.....*Sch. scoparium* var. *divergens*
 - 6 Most pedicellate spikelets sterile, 1-6 mm long, without a lemma; sheaths and blades usually glabrous, occasionally pubescent.....*Sch. scoparium* var. *scoparium*

Schizachyrium littorale (Nash) Bicknell, Seaside Little Bluestem. Cp (FL?, GA, NC, VA): coastal dunes and maritime dry grasslands, often with *Uniola paniculata*, *Panicum amarum*, and other dune plants; uncommon. August-October. E. MA south to NC (or SC?), and inland on the shores of the Great Lakes. In NC, *Sch. littorale* is present and abundant on dunes of barrier islands from Shackleford Banks, Carteret County south to Brunswick County, near the SC border, and entirely absent from the Outer Banks (from Cape Lookout, Carteret County, north through Hyde County to Dare County). Reported for FL for ne. FL (Duval County) and Panhandle FL (Franklin County). [= FNA, GW, K; < *Andropogon scoparium* Michaux – RAB; = *Sch. scoparium* var. *littorale* (Nash) Gould – C, Z; = *Andropogon scoparius* Michaux var. *littoralis* (Nash) A.S. Hitchcock – F, G; = *Andropogon littoralis* Nash – HC, S; < *Sch. scoparium* (Michaux) Nash ssp. *littorale* (Nash) Gandhi & Smeins – Y]

Schizachyrium maritimum (Chapman) Nash. Cp (AL, FL, LA, MS): coastal dunes and grasslands; common. AL, FL west to e. LA. [= FNA, GW, K; = *Andropogon maritimus* Chapman – HC, S] {add to synonymy}

Schizachyrium sanguineum (Retzius) Alston var. *hirtiflorum* (Nees) Hatch, Hairy Crimson Bluestem. Cp (AL, FL, GA): pine flatwoods, sandhills, disturbed sandy sites; rare. Sw. GA and FL west to AZ and south through Central America to South America; West Indies. [= FNA, K; = *Andropogon hirtiflorus* (Nees) Kunth – HC, S; ? *Sch. sanguineum* var. *brevipedicellatum* (Beal) Hatch]

Schizachyrium scoparium (Michaux) Nash var. *scoparium*, Common Little Bluestem. Cp (FL, GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Ip (KY): in a wide range of moist to dry habitats; common. (June-) August-October. New Brunswick west to Alberta, south to FL and Mexico. One of the most ubiquitous plants in the modern landscape of our area, occurring throughout in the majority of habitats. This species is extremely variable, some of the variability correlated with habitat and geography; the recognition of infraspecific taxa is warranted. [= C, FNA, Z; < *Andropogon scoparius* Michaux – RAB (also see *Sch. littorale*); = *Sch. scoparium* – GW, WV; > *Andropogon scoparius* var. *scoparius* – F, G, HC; > *Andropogon praematurus* Fernald – F, G; > *Andropogon scoparius* var. *polycladus* Scribner & Ball – F; > *Andropogon scoparius* var. *frequens* F.T. Hubbard – F; = *Sch. scoparium* ssp. *scoparium* – K, Y; < *Andropogon scoparius* – S, W]

Schizachyrium scoparium (Michaux) Nash var. *stoloniferum* (Nash) J. Wipff, Creeping Little Bluestem. Cp (AL, FL, GA, MS, SC): fall-line sandhills in the inner Coastal Plain, perhaps in other dry habitats, the habitat and range in our area requiring further study; uncommon? August-October. SC and GA south to FL and west to MS. See Wipff (1996a) for additional discussion. [= FNA, K, Z; = *Sch. stoloniferum* Nash – GW; = *Andropogon stolonifer* (Nash) A.S. Hitchcock – HC, S; < *Sch. scoparium* ssp. *littorale* (Nash) Gandhi & Smeins – Y]

Schizachyrium tenerum Nees, Slender Bluestem. Cp (AL, FL, GA, LA, MS): longleaf pine savannas, sandhills, and flatwoods; uncommon. Ne. FL, s. GA, and FL Panhandle west to e. TX. [= FNA, K; = *Andropogon tener* (Nees) Kunth – HC, S]

Schizachyrium niveum (Swallen) Gould, Pinescrub Bluestem, is reported for Lowndes Co. in sc. GA (Kral 1973), but the report has been discounted by later authors (Wipff in FNA 2003a). Not keyed. [= FNA, K; = *Andropogon niveus* Swallen – HC, S]

Schizachyrium scoparium (Michaux) Nash var. *divergens* (Hackel) Gould, Pinehill Bluestem. Cp (FL): {habitat}; abundance. East to c. TN, AL, KY (?). [= FNA, K; = *Andropogon scoparius* Michaux var. *divergens* Hackel; = *Andropogon divergens* – HC; < *Andropogon scoparius* – S]

Sclerochloa Palisot de Beauvois 1812 (Hard Grass)

A genus of 2 species, annuals, native of s. Europe and w. Asia. References: Brandenburg in FNA (2007a); Tucker (1996)=Z; Brandenburg, Estes, & Thieret (1991).

* *Sclerochloa dura* (Linnaeus) Palisot de Beauvois, Hard Grass, Fairground Grass. Mt (VA), {GA}: athletic fields, lawns; rare, native of Mediterranean Europe. Known from a single site in VA, and doubtfully persisting (VBA 2007). Also reported from GA, MD, MS, and TN (Kartesz 1999). [= C, HC, K, Z]

Secale Linnaeus 1753 (Rye)

A genus of 3 species, native to western w. Asia and the Mediterranean. References: Barkworth in FNA (2007a); Tucker (1996)=Z.

* *Secale cereale* Linnaeus, Rye. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): fields; commonly cultivated, uncommonly persistent or volunteering after cultivation, native of Eurasia. May-June. An important crop, cultivated for at least 8000 years. The lemmas have awns 2-6 cm long. [= RAB, C, F, FNA, G, HC, K, Z]

Setaria Palisot de Beauvois 1807 (Foxtail Grass)

A genus of about 110-140 species, of tropical and warm temperate regions. Webster (1995) has merged *Paspalidium* into *Setaria*. References: Webster (1993)=Z; Webster (1995)=Y; Crins (1991)=X; Webster (1988); Rominger in FNA (2003a); Allen in FNA (2003a). Key adapted from FNA. [also see *Pennisetum*]

- 1 None of the spikelets subtended by a stiff bristle.
 - 2 Spikelets 2.2-2.4 mm long; glumes and sterile lemma not papery *S. geminata* var. *geminata*
 - 2 Spikelets 2.8-3.0 mm long; glumes and sterile lemma papery *S. geminata* var. *paludivaga*
- 1 Terminal spikelet on each branch subtended by a single bristle (other spikelets also sometimes so subtended)
 - 3 Most spikelets other than the terminal lacking a subtending bristle; leaves plicate; [rare aliens].
 - 4 Annual; leaves 10-25 mm wide *S. barbata*
 - 4 Perennial; leaves 20-80 mm wide *S. palmifolia*
 - 3 All spikelets subtended by 1 or more bristles; leaves flat; [aliens and natives, collectively widespread and common].
 - 5 Bristles 4-12 below each spikelet.
 - 6 Annual, with fibrous roots *S. pumila* ssp. *pumila*
 - 6 Perennial, noticeably rhizomatous.
 - 7 Panicle 3-8 (10) cm long; plant from knotty rhizomes; [native, common (sometimes weedy)] *S. parviflora*
 - 7 Panicle 5-25 cm long; plant from thick rhizomes; [alien, rare] *S. sphacelata*
 - 5 Bristles 1-3 (rarely 6) below each spikelet.
 - 8 Bristles retrorsely scabrous.
 - 9 Leaves strigose on the lower surface; sheath margins glabrous; panicles 2-6 cm long *S. adhaerans*
 - 9 Leaves scabrous on the lower surface; sheath margins ciliate; panicles 5-15 cm long *S. verticillata*
 - 8 Bristles antrorsely scabrous
 - 10 Perennial *S. macrosperma*
 - 10 Annual.
 - 11 Upper lemmas smooth and shiny (occasionally with obscure rugosity)
 - 12 Culms to 1 m tall; spikelets ca. 3 mm long; [alien, of ruderal sites] *S. italica*
 - 12 Culms to 6 m tall; spikelets ca. 2 mm long; [native, of marshes] *S. magna*
 - 11 Upper lemmas distinctly transversely rugose, dull.
 - 13 Upper lemmas coarsely rugose; leaves 4-7 mm wide; [native] *S. corrugata*
 - 13 Upper lemmas finely rugose; leaves 4-25 mm wide; [aliens, generally of ruderal sites].
 - 14 Panicles verticillate; rachises visible, scabrous *S. verticilliformis*
 - 14 Panicles densely spiciform; rachises not visible, villous.
 - 15 Leaves softly pilose on the upper surface; panicles arching and drooping from the base; spikelets 2.5-3.0 mm long *S. faberi*
 - 15 Leaves scabrous on the upper surface; panicles nodding only at the tip; spikelets 1.8-2.2 mm long.
 - 16 Panicles 10-20 cm long; culms 10-25 dm tall; leaves 10-25 mm wide *S. viridis* var. *major*
 - 16 Panicles 3-8 cm long; culms 2-10 dm tall; leaves 4-12 mm wide *S. viridis* var. *viridis*

* *Setaria barbata* (Lamarck) Kunth, Mary-grass. Cp (FL, MS): on ballast at Apalachicola (Franklin County, FL), other disturbed areas; rare, native of Africa. [= FNA, HC, K]

Setaria corrugata (Elliott) J.A. Schultes. Cp (FL, GA, NC, SC): pinelands, disturbed areas; common. From ne. NC south to s. FL, west to e. TX; Cuba; Dominican Republic. [= RAB, FNA, HC, K, Z; = *Chaetochloa corrugata* (Elliott) Lamson-Scribner - S]

* *Setaria faberi* R.A.W. Herrmann, Nodding Foxtail Grass, Giant Foxtail-grass. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): disturbed areas; common (uncommon south of VA), native of China. [= RAB, C, FNA, G, K, W; = *S. faberii* - F, HC, WV, Z, orthographic variant]

Setaria geminata (Forsskål) Veldkamp var. *geminata*. Cp (AL, FL): in shallow water of swamps; uncommon. Pantropical and subtropical. [= Y; < *Paspalidium geminatum* – FNA, GW, X; = *Panicum geminatum* Forsskål – HC, S; = *Paspalidium geminatum* (Forsskål) Stapf var. *geminatum* – K]

Setaria geminata (Forsskål) Veldkamp var. *paludivaga* (A.S. Hitchcock & Chase) R.D. Webster, Alligator Grass, *Paspalidium*. Cp (FL, GA, SC): in shallow water; rare. December. S. SC south to FL, west to TX; also in Central and South America. This taxon is sometimes considered an introduction from the Old World, but its occurrence in undisturbed wetlands remote from extensive human activity suggests that it is native. [= Y; = *Panicum paludivagum* A.S. Hitchcock & Chase – RAB, HC, S; < *Paspalidium geminatum* – FNA, GW, X; = *Paspalidium geminatum* (Forsskål) Stapf var. *paludivagum* (A.S. Hitchcock & Chase) Gould – K; = *Paspalidium paludivagum* (A.S. Hitchcock & Chase) Parodi]

* *Setaria italica* (Linnaeus) Palisot de Beauvois, Foxtail-millet, Italian-millet. Pd (GA, NC, SC, VA), Cp (VA), Mt (VA): disturbed areas, rare (uncommon in VA Piedmont), native of Eurasia. Probably derived via cultivation from *S. viridis*, and cultivated as a food crop in China since at least 6000 BP and later in Europe (Hancock 2004). [= RAB, C, F, FNA, G, HC, K, W, WV, Z; = *Chaetochloa italica* (Linnaeus) Lamson-Scribner – S]

Setaria macrosperma (Lamson-Scribner & Merrill) K. Schumann, Coral Bristlegrass. Cp (FL, GA, SC): hammocks and maritime forests, also disturbed areas; rare. SC south to FL; Bahamas, Mexico. [= RAB, FNA, HC, K, Z; = *Chaetochloa macrosperma* Lamson-Scribner & Merrill – S]

Setaria magna Grisebach, Saltmarsh Foxtail-grass, Giant Foxtail-grass. Cp (FL, GA, NC, SC, VA), Pd* (GA*): interdune swales, near-coastal marshes; uncommon. NJ south to s. FL, west to e. TX; disjunct inland in GA, AR, LA, TX, and NM; West Indies, Bermuda, Costa Rica. [= RAB, C, F, FNA, G, HC, K, Z; = *Chaetochloa magna* (Grisebach) Lamson-Scribner – S]

* *Setaria palmifolia* (J. König) Stapf, Palmgrass. Cp (FL, LA): disturbed areas; rare, native of Asia. [= FNA, HC, K]

Setaria parviflora (Poiret) Kerguelen, Knotroot Bristlegrass, Perennial Foxtail-grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): marshes, ditches, moist disturbed areas; common. MA to IA south to s. FL and s. TX, south through Mexico to Central America; CA and NV; West Indies. Gandhi & Barkworth (2003) provide a detailed discussion of the reasons for the nomenclatural change. [= FNA, K, Z; = *S. geniculata* Palisot de Beauvois – RAB, C, F, G, HC, W, WV; = *Chaetochloa geniculata* (Palisot de Beauvois) Millspaugh & Chase – S]

* *Setaria pumila* (Poiret) Roemer & Schultes ssp. *pumila*, Yellow Foxtail. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): disturbed areas, lawns, fields; common (rare in FL), native of Europe. [= FNA; = *Setaria glauca* (Linnaeus) Palisot de Beauvois – RAB, C, F, G, W, WV, misapplied; >> *Setaria lutescens* (Weigel) Hubb. – HC, misapplied; >> *S. pumila* ssp. *pallidifusca* – K, treatment apparently garbled; = *Chaetochloa lutescens* (Weigel) Stuntz – S]

* *Setaria sphacelata* (Schumacher) Stapf & C.E. Hubbard, African Bristlegrass. Cp (AL, FL, MS): disturbed areas; rare, native of Africa. [= FNA, K]

* *Setaria verticillata* (Linnaeus) Palisot de Beauvois, Hooked Bristlegrass. Mt (VA): disturbed areas; uncommon, native of Europe. [= FNA, G, K; = *S. verticillata* var. *verticillata* – C, F, HC; = *Chaetochloa verticillata* (Linnaeus) Lamson-Scribner – S; < *S. verticillata* – Z]

* *Setaria viridis* (Linnaeus) Palisot de Beauvois var. *viridis*, Green Bristlegrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): fields, disturbed areas; common, native of Eurasia. [= C, FNA, K, Z; < *S. viridis* – RAB, HC, W, WV; > *S. viridis* var. *viridis* – F, G; > *S. viridis* var. *weinmannii* (Roemer & J.A. Schultes) Bolbás – F; > *S. viridis* var. *brevisetata* (Doell) A.S. Hitchcock – G; = *Chaetochloa viridis* (Linnaeus) Lamson-Scribner – S]

Setaria adhaerans (Forsskål) Chioevenda. Cp (AL): disturbed areas; rare. Distributed widely throughout the tropics and subtropics, in North America from s. AL west to CA (perhaps only adventive in portions of that distribution). [= FNA, K, Z] {synonymy incomplete}

* *Setaria verticilliformis* Dumortier. Reported for NJ, PA, MD, and AL (FNA 2003a, Kartesz 1999). [= FNA, K; = *S. verticillata* (Linnaeus) Palisot de Beauvois var. *ambigua* (Guss.) Parlatores – C, F, HC; = *S. viridis* (Linnaeus) Palisot de Beauvois var. *ambigua* (Guss.) Coss. & Durieu – G; = *Chaetochloa ambigua* Guss. – S; < *S. verticillata* – Z]

* *Setaria viridis* (Linnaeus) Palisot de Beauvois var. *major* (Gaudin) Pospichal, Giant Green Foxtail. Reported as introduced in TN, MD, and PA (Kartesz 1999). [= C, FNA, G, K, Z; < *S. viridis* – RAB, HC]

Sorghastrum Nash 1901 (Indiangrass)

A genus of about 18-20 species, of tropical and subtropical America and Africa, rarely extending into temperate areas.

References: Hall (1982)=Z; Dávila Aranda & Hatch in FNA (2003a). Key adapted from Z.

- 1 Awns 10-22 (-30) mm long, once-geniculate; plants rhizomatous; surfaces of the glumes tan to slightly brown basally; ligule 2-10 mm long, prominently auricled.....*S. nutans*
- 1 Awns 16-46 mm long, twice-geniculate; plants cespitose; surfaces of the glumes brown; ligule 1-5 mm long, truncate.
 - 2 Axis of the panicle straight, erect, the branchlets appressed to ascending, the spikelets drooping-secund; spikelets 0.8-1.2 mm wide*S. secundum*
 - 2 Axis of the panicle arching, usually strongly so, the branchlets ascending to spreading, the spikelets not drooping-secund; spikelets 1.1-1.8 mm wide.
 - 3 Axis of the panicle straight, with the branches distributed no more than 180 degrees around the axis (as viewed from above)*S. apalachicolense*
 - 3 Axis of the panicle arching, with the branchlets distributed through 360 degrees around the axis (as viewed from above)*S. elliotii*

Sorghastrum apalachicolense D.W. Hall, Apalachicola Indiangrass, Open Indiangrass. Cp (FL): flatwoods and sandhills; rare. July-August. Panhandle FL west to s. MS (Sorrie & Leonard 1999). It may well occur as well in GA. [= K, Z; < *S. elliotii* – FNA]

Sorghastrum elliottii (C. Mohr) Nash, Slender Indiangrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): woodlands and forests, river-scour areas, including oak-hickory forests and woodlands over mafic rocks; uncommon. September-October. MD south to FL and west to TX, inland to TN, AR, and OK, mainly on the Coastal Plain, but extending inland to other physiographic provinces. [= RAB, C, F, G, HC, K, S, W, Z; < *S. elliottii* – FNA (also see *S. apalachicolense*)]

Sorghastrum nutans (Linnaeus) Nash, Yellow Indiangrass. Mt (GA, KY, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, GA, KY, NC, SC, VA), Ip (KY): xeric and mesic woodlands and forests of a wide variety, powerline rights-of-way, roadbanks; common (uncommon in Mountains south of VA). September-October. ME and Québec west to s. Manitoba, south to c. peninsular FL, TX, UT, AZ, and Mexico. Along with *Andropogon gerardii*, *Schizachyrium scoparium*, and *Panicum virgatum*, *Sorghastrum nutans* is one of the dominant grasses of the tall-grass prairie. It is also common in a variety of open habitats (natural and altered) in the forested landscape of eastern North America. [= RAB, C, F, FNA, G, HC, K, S, W, WV, Z; = *S. avenaceum* (Michaux) Nash]

Sorghastrum secundum (Elliott) Nash, Lopsided Indiangrass. Cp (FL, GA, SC): sandhills; common (uncommon north of FL). September-October. S. SC south to s. FL and west to s. AL (Sorrie & Leonard 1999). [= RAB, FNA, HC, K, S, Z]

Sorghum Moench 1794 (Sorghum, Milo, Johnson Grass)

A genus of about 25 species, of tropical and subtropical Old World (1 species in Mexico). References: Barkworth in FNA (2003a); de Wet (1978)=Z.

- 1 Rhizomatous perennial; leaves 1-2 cm wide..... *S. halepense*
- 1 Fibrous-rooted annual; leaves (2-) 3-5 cm wide.
- 2 Inflorescence dense, compact; plants 0.5-1.3 m tall..... *S. bicolor* var. *bicolor*
- 2 Inflorescence open, with spreading branches; plants 1.0-3.0 m tall *S. bicolor* var. *drummondii*

* *Sorghum bicolor* (Linnaeus) Moench var. *bicolor*, Sorghum, Milo, Broomcorn, Sorgo. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA): cultivated, rarely persistent; common in cultivation, rare as an escape. October. [= C; < *Sorghum vulgare* Persoon – RAB; < *Sorghum vulgare* – F, orthographic variant; = *S. vulgare* var. *vulgare* – HC; = *S. bicolor* ssp. *bicolor* – FNA, K; < *Holcus sorghum* Linnaeus – S]

* *Sorghum bicolor* (Linnaeus) Moench var. *drummondii* (Nees ex Steudel) Mohlenbrock, Shattercane. Cp, Pd (GA, NC, SC, VA): cultivated, rarely persistent; common in cultivation, rare as an escape. October. This is the taller variety with open inflorescences, usually sporadically present in sorghum fields. [= C; < *Sorghum vulgare* Persoon – RAB; < *Sorghum vulgare* – F, orthographic variant; = *Sorghum bicolor* ssp. *drummondii* (Nees ex Steudel) de Wet – FNA; = *Sorghum vulgare* Persoon var. *drummondii* (Nees ex Steudel) Hackel ex Chiovenda – HC; = *Sorghum bicolor* ssp. *drummondii* (Nees ex Steudel) de Wet & Harlan – K; < *Holcus sorghum* Linnaeus – S]

* *Sorghum halepense* (Linnaeus) Persoon, Johnson Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides, fields, waste places; common, native of Eurasia. A serious weed, difficult to eradicate. [= RAB, C, FNA, GW, HC, K, W, WV; = *Sorghum halepense* – F, G, orthographic variant; = *Holcus halepensis* Linnaeus – S]

Spartina Schreber 1789 (Cordgrass)

A genus of ca. 15 species, of temperate America, Europe, and Africa. References: Barkworth in FNA (2003a).

- 1 Leaves with smooth or slightly scabrous margins; spikelets glabrous or nearly so; [of salt to brackish coastal marshes]..... *S. alterniflora*
- 1 Leaves with strongly scabrous margins; spikelets scabrous, at least on the keel; [of brackish to fresh marshes, or inland or upland].
- 2 Plants strongly caespitose, forming large clumps with numerous basal leaves and culms; leaves involute; culms 0.5-2 m tall; [of s. SC southward].
- 3 Spikes 3-16 per inflorescence, appressed to ascending; leaves 3-7 mm wide, involute or somewhat flat toward the bases..... *S. bakeri*
- 3 Spikes (6-) 15-75 per inflorescence, tightly appressed; leaves 1.5-4.5 mm wide, strongly involute *S. spartinae*
- 2 Plants with elongate rhizomes, forming large clonal patches, the culms arising singly; leaves involute or flat; culms either 0.5-3.5 m tall; [collectively widespread in our area].
- 4 Spikes 1-9 per inflorescence; culms 0.5-1 m tall; leaves 0.5-4 (-7) mm wide, usually involute when fresh.
- 5 Spikelets 7-10 mm long; second glume acute to obtuse (rarely acuminate); spikes (2-) 4-9 per inflorescence; second highest leaf blade on the stem (1-) avg. 2 (-5) dm long; plants to 15 dm tall; culms to 6 mm in diameter at base..... *S. patens* var. *monogyna*
- 5 Spikelets 9-13 mm long; second glume acuminate; spikes 1-4 per inflorescence; second highest leaf blade on the stem (0.5-) avg. 1 (-2) dm long; plants to 8 dm tall; culms to 3 mm in diameter at base *S. patens* var. *patens*
- 4 Spikes 5-70 per inflorescence; culms 1-3.5 m tall; leaves 5-20 mm wide, usually flat when fresh.
- 6 Second glume acute, not awned; first glume averaging ca. 1/2 as long as the lemma; spikes (6-) 20-50 (-more) per inflorescence; [of fresh to brackish coastal marshes]..... *S. cynosuroides*
- 6 Second glume with an awn 3-10 mm long; first glume averaging ca. 7/8 as long as the lemma; spikes (5-) 7-27 per inflorescence; [of fresh marshes, either inland or coastal]..... *S. pectinata*

Spartina alterniflora Loiseleur, Saltmarsh Cordgrass, Smooth Cordgrass. Cp (AL, FL, GA, LA, MS, NC, SC, VA): salt marshes; common. August-October. Newfoundland south to FL, west to TX; e. South America; introduced in n. Europe. *S. alterniflora* is the dominant plant (often essentially a monoculture) of intratidal salt marshes in our area. [= RAB, C, FNA, GW, K; > *S. alterniflora* var. *alterniflora* – F, G, HC, S; > *S. alterniflora* var. *glabra* (Muhlenberg ex Bigelow) Fernald – F, G, HC, S; > *S. alterniflora* var. *pilosa* (Merrill) Fernald – F, G, HC]

Spartina bakeri Merrill, Sand Cordgrass. Cp (FL, GA, SC): brackish marshes, marsh edges, wet coastal hammocks, under *Sabal palmetto*, *Quercus virginiana*, and *Juniperus virginiana* var. *silicicola*; rare. June. Se. SC south to s. FL, west to panhandle FL. Distinctive among our species in its densely clumped growth form. [= FNA, GW, HC, K, S]

Spartina cynosuroides (Linnaeus) Roth, Giant Cordgrass. Cp (AL, FL, GA, LA, MS, NC, SC, VA): brackish and freshwater tidal marshes, especially along margins of tidal creeks; common. June-September. MA south to FL, west to e. TX. [= RAB, C, FNA, G, GW, HC, K, S; > *S. cynosuroides* var. *cynosuroides* – F]

Spartina patens (Aiton) Muhlenberg var. *monogyna* (M.A. Curtis) Fernald, Large Saltmeadow Cordgrass. Cp (AL, FL, GA, LA, MS, NC, SC, VA): sandy shores, overwash flats; common. June-September. MA south to FL, west to TX. Whether var. *monogyna* is worthy of recognition is a matter of debate; there appear to morphological differences correlated with geography and, according to some authors, habitat, but positive identification to variety is sometimes difficult. [= F, G, HC; < *S. patens* – RAB, C, FNA, GW, K, S]

Spartina patens (Aiton) Muhlenberg var. *patens*, Small Saltmeadow Cordgrass, Salt Hay, Marsh-hay Cordgrass. Cp (NC, VA): dunes, sand flats, upper edges of marshes, maritime wet grasslands; common. June-September. Newfoundland south to NC, and perhaps further. [= F, G, HC; < *S. patens* – RAB, C, FNA, GW, K, S]

Spartina pectinata Link, Prairie Cordgrass, Slough Grass. Mt (KY, NC, VA), Cp (KY, NC, VA), Ip (KY), {DC, DE, MD, TN, WV}: spray cliffs below waterfalls, rocky or sandy flood-scoured riverside grasslands, tidal freshwater (oligohaline) marshes, calcareous oak flatwoods and prairies; rare. July-September. Newfoundland west to WA, south to ne. NC, sw. NC, AR, TX, and NM. [= RAB, C, F, FNA, G, GW, HC, K, W, WV; > *S. pectinata* var. *pectinata* – F; > *S. pectinata* var. *suttiei* (Farwell) Fernald – F; = *S. michauxiana* A.S. Hitchcock – S]

Spartina spartinae (Trinius) Merr. ex A.S. Hitchcock, Gulf Cordgrass. Cp (AL, FL, LA, MS): brackish marshes and inland saline situations; common. AL and FL west to TX. [= FNA, GW, HC, K, S]

Sphenopholis Scribner 1906 (Wedgegrass)

A genus of 6 species, North American. References: Daniel in FNA (2007a); Tucker (1996)=Z. Key based in part on C.

- | | | |
|---|---|------------------------|
| 1 | Spikelets 5-9.5 mm long; second lemma with an awn 3.5-7 mm long..... | <i>S. pensylvanica</i> |
| 1 | Spikelets 1.5-5 mm long; second lemma awnless, or with an awn up to 3.5 mm long. | |
| 2 | Lower leaf blades mostly (10-) 15-45 cm long, usually involute, < 2 mm wide..... | <i>S. filiformis</i> |
| 2 | Lower leaf blades mostly < 10 cm long, flat, 2-8 mm wide. | |
| 3 | First glume 1/3-2/3 as wide as the second glume; second glume strongly scabrous..... | <i>S. nitida</i> |
| 3 | First glume less than 1/3 as wide as the second glume; second glume smooth to slightly scabrous. | |
| 4 | First lemma with an awn up to 3.5 mm long..... | <i>S. ×pallens</i> |
| 4 | First lemma unawned. | |
| 5 | Panicle open; second glume 3-6× as long as wide, acute at the tip; lowermost rachilla internode 0.8-1.0 mm long..... | <i>S. intermedia</i> |
| 5 | Panicle densely cylindrical; second glume 2-3× as long as wide, rounded or truncate at the tip; lowermost rachilla internode 0.5-0.7 mm long..... | <i>S. obtusata</i> |

Sphenopholis filiformis (Chapman) Scribner. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): pine savannas, sandy woodlands; common (uncommon north of FL, rare in VA). April-May. Se. VA south to c. FL, west to e. TX. [= RAB, C, F, FNA, K, S, Z]

Sphenopholis intermedia (Rydberg) Rydberg, Slender Wedgegrass. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist nutrient-rich forests; rare. May-June. Newfoundland west to c. AK, south to Panhandle FL, c. TX, and AZ. Perhaps better treated at the varietal level. [= RAB, F, FNA, K, S, WV; = *S. obtusata* (Michaux) Scribner var. *major* (Torrey) K.S. Erdman – C, Z; < *S. intermedia* – G (also see *S. ×pallens*); < *S. obtusata* – GW, W]

Sphenopholis nitida (Biehler) Scribner. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): moist forests, bottomlands; common (uncommon in FL). April-May. MA west to IL, south to FL and TX. [= RAB, C, F, FNA, K, W, S, WV, Z; > *S. nitida* var. *glabra* (Nash) Scribner – G; > *S. nitida* var. *nitida* – G]

Sphenopholis obtusata (Michaux) Scribner, Prairie Wedgegrass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): forests, roadsides, disturbed areas; common (uncommon in Mountains). April-May. ME west to MN and British Columbia, south to s. FL, TX, c. Mexico, and s. CA. [= RAB, FNA, G, K, S, WV; = *S. obtusata* var. *obtusata* – C, Z; > *S. obtusata* var. *obtusata* – F; > *S. obtusata* var. *pubescens* (Lamson-Scribner & Merrill) Lamson-Scribner – F; < *S. obtusata* – GW, W (also see *S. intermedia*)]

Sphenopholis ×pallens (Biehler) Scribner (pro sp.) [*S. obtusata* × *pensylvanica*]. Cp (NC, SC, VA): ditches, wet forests; rare. Seemingly not always with its parents. May. [= C, K; = *S. pallens* – RAB, F, S; < *S. intermedia* (Rydberg) Rydberg – G]

Sphenopholis pensylvanica (Linnaeus) A.S. Hitchcock, Swamp-oats. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA): bogs, ditches, wet forests; uncommon. April-June. MA west to OH and se. MO, south to n. FL and LA. [= C, FNA, K, Z; = *Trisetum pensylvanicum* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes – RAB, F, G, S, WV; = *S. pensylvanica* – GW, orthographic variant]

Sporobolus R. Brown 1810 (Dropseed)

A genus of about 160 species, perennials and annuals, of tropical, subtropical, and warm-temperate parts of the New World and Old World. References: Riggins (1977)=Z; Weakley & Peterson (1998)=Y; Peterson, Hatch, & Weakley in FNA (2003a).

- 1 Inflorescence an open panicle, > 2 cm broad, the branches ascending to spreading.
- 2 Branches of the panicle verticillate, whorled; spikelets 2.5-4 mm long *S. junceus*
- 2 Branches of the panicle alternate (some occasionally rather randomly subopposite or opposite, but never regularly whorled); spikelets either 4-6.5 mm long, or 1.5-2.5 (2.7) mm long.
- 3 Spikelets 1.5-2.5 (-2.7) mm long.
- 4 Panicle branches bare of spikelets in the lower ¼-½ of their length *S. cryptandrus*
- 4 Panicle branches bearing spikelets to the base *S. domingensis*
- 3 Spikelets 4-6.5 mm long.
- 5 First glume scaberulous, acuminate or awn-like; spikelets dark gray; base of plant relatively fibrous; grain spherical; [of rocky barrens of the Mountains of NC and VA] *S. heterolepis*
- 5 First glume glabrous, acute to acuminate; spikelets purplish (fading tan); base of plant smooth and hard, made up of the indurated leaf bases; grain oblong (when present, usually abortive); [of pine savannas and seeps of the Coastal Plain of NC, SC, and southward].
- 6 Leaves terete or subterete (wiry), oval in cross-section, sometimes irregularly channelled for portions of their lengths (never with any portion above the sheath flat), < 1 mm wide, tending to senesce and turning tan in autumn, the margins generally smooth; culms (including the inflorescence) (2-) 4-7 (-10) dm tall; culms (from base to first inflorescence branch) 1.5-5 dm tall; first glume averaging about 0.7× as long as the second glume (though variable, ranging from 0.5-0.75×) *S. teretifolius*
- 6 Leaves flat (folded when dry), plane or V-shaped in cross-section, with free margins their entire length, 1.2-2 (-2.7) mm wide, tending to remain green into the winter (at least until December), the margins scabrous (except in *S. curtissii*); culms (including the inflorescence) 3-22 dm tall; culms (from base to first inflorescence branch) (4-) 6-10 dm tall; first glume averaging 0.75-1× as long as the second glume (though variable, collectively ranging from about 0.6-1.2×).
- 7 First glume averaging 0.95-1.1× as long as the second glume (though variable, ranging from 0.8-1.3×); pedicels mostly 1-3 mm long (a few sometimes as long as 10 mm long), appressed; culms (including the inflorescence) 3-7 dm tall; inflorescence branches stiffly ascending; leaves 0.5-1.5 mm wide (or to 2.0 mm wide when unburned), mostly 1.5-4 dm long (rarely to 5 dm long), smooth on the margins; [of e. SC southward] *S. curtissii*
- 7 First glume averaging 0.6-0.9× as long as the second glume (though variable, ranging from 0.6-0.95×); pedicels mostly 4-15 mm long, spreading; culms (including the inflorescence) (3-) 7-16 (-22) dm tall; inflorescence branches initially ascending, later loosely ascending to spreading; leaves 1.2-10.0 mm wide, mostly (3-) 4-8 dm long, upwardly scabrous on the margins; [of e. NC southward].
- 8 Leaves (2.0-) 3-10 mm wide, pale bluish-green (often with some yellowish leaves as well); first glume averaging 0.75-0.9× as long as the second glume (though variable, ranging from 0.6-0.95×); culms (including the inflorescence) usually 12-22 dm tall; inflorescence usually 3.5-5 dm long; [of se. SC southward] *S. floridanus*
- 8 Leaves 1.2-2.0 (-3.0) mm wide, dark green; first glume averaging 0.6-0.8× as long as the second glume (though variable, ranging from 0.6-0.8×); culms (including the inflorescence) usually 6-12 (-18) dm tall; inflorescence usually 2-3.5 dm long; [of e. NC south to e. GA] *S. pinetorum*
- 1 Inflorescence a contracted, spike-like panicle, < 2 cm broad, the branches appressed.
- 9 Plant a geniculate annual; most inflorescences enclosed by sheaths (or most or all exserted); inflorescence 2-5 cm long.
- 10 Spikelets (1.3-) 1.6-2.8 mm long; grain falling free of the lemma and palea; lemma glabrous *S. neglectus*
- 10 Spikelets 2.3-5 mm long; grain falling enclosed in the lemma and palea; lemma strigose (use 10× or more) or glabrous.
- 11 Lemma and palea shorter than the glumes; palea usually shorter than the lemma; lemma glabrous or strigose with hairs < 0.2 mm long; spikelets 2.3-3.3 (-3.8) mm long; floret (lemma, palea and enclosed grain) 1.6-3.3 (-3.8)× as long as wide *S. ozarkanus*
- 11 Lemma and palea longer than the glumes; palea usually longer than the lemma; lemma strigose with hairs > 0.2 mm long; spikelets 2.8-5 mm long; floret (lemma, palea and enclosed grain) 2.2-5.7 (-7.5)× as long as wide *S. vaginiflorus*
- 9 Plant a rhizomatous or tufted perennial; most inflorescences exserted to partly enclosed; inflorescence 5-15 cm long.
- 12 Plant creeping extensively by slender rhizomes; leaf blades cauline, distichous, to 12 cm long *S. virginicus*
- 12 Plant loosely tufted, from short rhizomes; leaf blades basal or cauline, not distichous, 10-100 cm long.
- 13 Spikelets 1.5-2.2 mm long; first glume 0.5-0.8 mm long; leaves primarily basal.
- 14 Panicle branches appressed, 0.5-2 cm long in the middle of the inflorescence; second glume acute, > ½ as long as the spikelet *S. indicus*
- 14 Panicle branches ascending, 2-8 cm long in the middle of the inflorescence; second glume truncate or broadly obtuse, < ½ as long as the spikelet *S. pyramidalis*
- 13 Spikelets 4-8 mm long; first glume 2-5 mm long; leaves cauline and basal.
- 15 Lemma pubescent, usually conspicuously shorter than the palea; pericarp loose when moist *S. clandestinus*
- 15 Lemma glabrous, about as long as the palea; pericarp gelatinous when moist.
- 16 Culms (1.4-) 2.0-5.0 mm thick; terminal sheath (1.3-) 1.5-6.0 mm wide; panicles with 12-35 primary branches, crowded, dense *S. compositus* var. *compositus*
- 16 Culms 1.0-2.0 (-2.5) mm thick; terminal sheath 0.8-2.0 (-2.5) mm wide; panicles with 8-18 primary branches, lax, loosely flowered *S. compositus* var. *drummondii*

Sporobolus clandestinus (Biehler) A.S. Hitchcock, Rough Dropseed. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA), Mt (VA), Ip (KY): glades, barrens, and thin soil of woodlands, also in dry sands; uncommon. September-October. This species is widespread in e. United States. Wipff & Jones (1995) recommend reducing this taxon to a variety under *S. compositus*, because of its morphologic similarity. While *S. clandestinus* and *S. compositus* are undoubtedly closely related, I prefer to retain the two as species. [= RAB, C, FNA, F, G, HC, K, S, W, Z; = *S. compositus* (Poiret) Merrill var. *clandestinus* (Biehler) J. Wipff & S.D. Jones]

Sporobolus compositus (Poiret) Merrill var. *compositus*, Tall Dropseed. Ip (KY), Pd (NC?, VA), Mt (VA), Cp (KY, VA): diabase glades and barrens, limestone glades and barrens, disturbed areas over diabase or calcareous rocks; uncommon (rare in NC and VA). September-November. This species and variety are reported for NC in a recent revision of the *S. asper* group (Riggins 1977); little is known about the occurrence of this species in NC. The general range is centered in the Plains, but extending east into ne. United States. The name *S. compositus* has nomenclatural priority over the more familiar *S. asper* (Kartesz & Gandhi 1995). [= FNA, K; = *S. asper* (Michaux) Kunth var. *asper* - C, G, HC, Z; = *S. asper* - F, S, WV]

Sporobolus compositus (Poiret) Merrill var. *drummondii* (Trinius) Kartesz & Gandhi. Ip* (KY*){AL, GA?, MS, TN}: roadsides, disturbed areas; rare. East to the Ridge and Valley province of e. TN (Chester et al. 1993), occurring over limestone, and allegedly to GA (Kartesz 1999). It could very likely occur in sw. VA, as it is in Hawkins County, TN, immediately adjacent to VA (Chester et al. 1993). [= FNA, K; = *S. asper* (Michaux) Kunth var. *drummondii* (Trinius) Vasey – C, Z; = *S. drummondii* (Trinius) Vasey – F, S; = *S. asper* var. *hookeri* (Trinius) Vasey – G, HC, misapplied]

Sporobolus cryptandrus (Torrey) A. Gray, Sand Dropseed. Cp (KY, NC*?): floodplains, shores, disturbed areas; rare, native west of the Appalachians, introduced eastward. C. and w. North America. This species is reported for NC by HC, F, and S. [= C, FNA, G, K, HC, S, WV, Z; > *S. cryptandrus* var. *cryptandrus* – F]

Sporobolus curtissii (Vasey ex Beal) Small ex Scribner, Curtiss's Dropseed. Cp (FL, GA, SC): moist, gummy-clay flatwoods; uncommon (rare north of GA). September-November. E. SC south to c. FL. First positively documented for our area in 1993. Earlier attributions of *S. curtissii* to NC and SC were apparently based on misapplication or confusion with *S. teretifolius* and/or *Sporobolus pinetorum*. *S. curtissii* differs from other "bunchgrass" *Sporobolus* of our area in having the spikelets short-pedicelled and appressed against the panicle branches (as opposed to long-pedicelled and spreading in *S. teretifolius* and *Sporobolus pinetorum*). [= FNA, HC, K, S, Y]

*? *Sporobolus domingensis* (Trinius) Kunth, Coral Dropseed. Cp (GA): coastal sands?; rare, uncertain whether native or introduced. Se. GA south to s. FL; West Indies, Mexico. The e. GA record (Glynn County) is at Univ. of Georgia (Sorrie, pers. comm.). [= FNA, HC, K, S]

Sporobolus floridanus Chapman, Florida Dropseed. Cp (FL, GA, SC): wet savannas; uncommon (rare north of GA). June-September. Se. SC south to ne. FL, west to Panhandle FL. First positively documented for our area in 1995. Earlier attributions of *S. floridanus* to NC and SC were apparently based on misapplication or confusion with *Sporobolus pinetorum*. [= FNA, K, Y; < *S. floridanus* – GW, HC, S (also see *S. pinetorum*); the inclusion of *S. floridanus* in RAB was based on a misidentification of *S. pinetorum*]

Sporobolus heterolepis (A. Gray) A. Gray, Prairie Dropseed. Mt (GA, NC, VA), Ip (KY): barrens, glades, and prairies over mafic, ultramafic, and calcareous rocks (olivine, serpentine, limestone); rare. August-September. The primary distribution of *S. heterolepis* is in the Plains, with outliers east to nw. GA (Jones & Coile 1988), c. TN (Estes & Beck 2005), w. NC, w. VA, se. PA, ne. United States, and adjacent Canada. [= RAB, C, F, FNA, G, HC, K, W, Y]

Sporobolus indicus (Linnaeus) R. Brown, Smut Grass, Blackseed. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Ip (KY): roadsides, lawns, disturbed situations; common (rare in KY, rare in VA Mountains). Pantropical and subtropical, its original distribution obscured by its weedy capabilities and sometimes considered introduced in whole or in part. July-October. [= C, FNA, GW, W; > *S. poiretii* (Roemer & J.A. Schultes) A.S. Hitchcock – RAB, F, G, HC; > *S. indicus* – HC, S; > *S. berterioanus* (Trinius) A.S. Hitchcock & Chase – S; = *S. indicus* var. *indicus* – K]

Sporobolus junceus (Palisot de Beauvois) Kunth, Sandhills Dropseed. Cp (FL, GA, NC, SC), Pd (GA, NC, SC, VA): sandhills, other dry, open areas; common (uncommon in Piedmont, rare in VA). September-October. Se. VA south to FL and west to se. TX. [= RAB, C, F, FNA, G, HC, K, Y; = *S. gracilis* (Trinius) Merrill – S]

Sporobolus neglectus Nash, Barrens Dropseed. Ip (KY), Mt (VA): dry rocky barrens and outcrops, over calcareous rocks (such as limestone or dolomite); uncommon (rare in VA). August-September. ME west to ND, south to NJ, w. VA, TN, LA, and TX; apparently disjunct in WA and AZ. *S. ozarkanus*, *S. neglectus*, and *S. vaginiflorus* form a still very poorly understood complex. [= C, F, FNA, G, HC, K, S, W]

Sporobolus ozarkanus Fernald, Ozark Dropseed. Ip (KY), Pd (NC), Mt (VA): limestone glades, diabase glades; rare. September-October. KY west to KS, south to e. TN, AR, and TX; disjunct in c. NC. In Granville County, NC, it is associated (on glades of diabase, a mafic rock) with other taxa with affinities to midwestern glades and prairies: *Oligoneuron rigidum*, *Oligoneuron album*, *Baptisia australis* var. *aberrans*, *Symphytichum depauperatum*, *Silphium terebinthinaceum*, *Parthenium auriculatum*, *Ruellia humilis*, and others. *S. ozarkanus*, *S. neglectus*, and *S. vaginiflorus* form a still very poorly understood complex. [= C, F, G, HC, K; = *S. vaginiflorus* (Torrey ex A. Gray) Wood var. *ozarkanus* (Fernald) Shinnery – FNA, K]

Sporobolus pinetorum Weakley & P.M. Peterson, Carolina Dropseed, Savanna Dropseed. Cp (GA, NC, SC): wet savannas, savanna-pocosin ecotones, sandhill-pocosin ecotones, and extending upslope into mesic flatwoods or loamy or clayey shelves in the fall-line sandhills; uncommon (rare in GA and SC). June-September (and into December in response to growing-season fire). The identity of this taxon has been obscure; it is now clear that it is a previously unrecognized species, endemic to NC, SC, and adjacent e. GA. RAB included it in their concept of *S. teretifolius*, though it does not key well (keying imperfectly to either *S. floridanus* or *S. heterolepis*); in S and HC, it will key to *S. floridanus*, but the leaves are much narrower. Additionally, *S. floridanus* is a taller and coarser plant, the culms often averaging about 1.5 meters in height and 2-3 mm in diameter basally (vs. 1 meter high and 1 mm in diameter for *Sporobolus pinetorum*). In wet savannas of Columbus County, NC, *S. species 1* occurs with true *S. teretifolius* (the two codominant over many hectares!), and the two taxa are manifestly distinct. The leaves of *S. pinetorum* are not terete; after lengthy drought in the field (or dry on an herbarium sheet), the leaves become tightly folded to involute and can appear wiry. Like many Southeastern pineland grasses, *S. pinetorum* flowers only following fire. In vegetative condition it may be distinguished from *Aristida stricta* and *A. beyrichiana*, with which it often grows, by the leaf pubescence (*S. pinetorum* with scaberulous margins, best felt by running a finger along the margin near the base, from apex toward base, *A. stricta* and *A. beyrichiana* not scaberulous, and with a sparse line of pilose hairs running more or less the length of the leaf in *A. stricta* and sometimes in *A. beyrichiana*) and base (much more indurated and polished in *Sporobolus* than in *Aristida*). [= FNA, K, Y; >> *S. teretifolius* – RAB, misapplied; > *S. floridanus* – RAB, misapplied; < *S. floridanus* Chapman – HC, S]

Sporobolus pyramidalis Palisot de Beauvois, West Indian Dropseed. Cp (FL): pine flatwoods, beaches; rare. FL Panhandle (Wakulla County), FL peninsula; West Indies. The original distribution disputed, possible introduced. [< *S. jacquemontii* Kunth – FNA; = *S. indicus* var. *pyramidalis* (Palisot de Beauvois) Veldkamp – K; ? *S. berterioanus* (Trinius) A.S. Hitchcock & Chase – S]

Sporobolus teretifolius R.M. Harper, Wireleaf Dropseed. Cp (AL, GA, NC, SC): wet savannas, pitcherplant bogs; rare. July-September (and later in response to growing-season fire). Very similar vegetatively to *Aristida stricta*, *S. teretifolius* can be distinguished by its tuft of hairs at the base of the otherwise glabrous blade (as opposed to line of pilose hairs the length of the blade in *A. stricta*). This very rare species is known only from se. NC, ne. SC, s. GA, and se. AL (Houston County). Many of the counties reported for this species in RAB actually are based on misidentified specimens of *S. pinetorum*. In a few very wet savannas of Columbus and Brunswick counties, NC, *S. teretifolius* is dominant or codominant over many hectares. Like many savanna grasses, *S. teretifolius* generally flowers only following fire. [= FNA, HC, K, S, Y; < *S. teretifolius* – RAB (also see *S. pinetorum*)]

Sporobolus vaginiflorus (Torrey ex A. Gray) Wood, Poverty Dropseed. Pd (GA, NC, SC, VA), Mt (GA, KY, NC, SC, VA), Cp (FL, KY, VA), Ip (KY): glades, barrens, open disturbed sites; uncommon (rare in KY Mountains). September-October. The species occurs nearly throughout e. United States. *S. ozarkanus*, *S. neglectus*, and *S. vaginiflorus* form a still very poorly understood complex. [= RAB, C, G, HC, W, WV; = *S. vaginiflorus* var. *vaginiflorus* – F, FNA, K; = *S. vaginaeflorus* – S, orthographic variant]

Sporobolus virginicus (Linnaeus) Kunth, Seashore Dropseed, Coastal Dropseed. Cp (FL, GA, NC, SC): salt marshes, tidal mud flats, and low dunes in the outer Coastal Plain; common (rare north of FL). September-October. Se. NC along the coast to TX, in the West Indies and into n. South America (its alleged occurrence in se. VA is apparently incorrect). *Sporobolus virginicus* is similar in aspect and growth form to *Distichlis spicata*, with which it occurs in tidal flats. *Sporobolus virginicus* is more delicate, and typically has long hairs on either side of the collar of the sheath; *Distichlis spicata* is generally a coarser plant, and lacks long hairs around the collar of the sheath. [= RAB, C, F, FNA, G, GW, HC, K, S]

* *Sporobolus airoides* (Torrey) Torrey, Alkali Sacaton. Cp (SC): waste areas near wool-combing mills; rare, introduced from w. North America, not known to be established or persistent. [= FNA, HC, K] {not keyed}

* *Sporobolus fimbriatus* (Trinius) Nees. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from Africa. [= FNA, HC, K] {not keyed}

* *Sporobolus flexuosus* (Thurb. ex Vasey) Rydberg. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from sw. United States and n. Mexico. [= FNA, HC, K] {not keyed}

* *Sporobolus tenuissimus* (Martius ex Schrank) Kuntze. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of the tropical Old World and New World. [= FNA, K] {not keyed}

* *Sporobolus wrightii* Munro ex Scribner, Giant Sacaton. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from sw. United States. [= FNA, HC, K] {not keyed}

Steinchisma Rafinesque 1830 (Gaping Panic Grass)

A genus of about 6 species, perennial herbs, of s. North America, Central America, and South America. See discussion following *Panicum* regarding generic concepts. References: Zuloaga et al. (1998)=Z; Freckmann & Lelong in FNA (2003a).

Steinchisma hians (Elliott) Nash, Gaping Panic Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA): stream, pond, and lake shores, low woods, cypress-gum ponds, floodplains, marshes, ditches, seepage slopes; common (uncommon in Coastal Plain, rare in Mountains). May-October. Se. VA south to FL, west to TX and OK, and south through Mexico and Central America to Colombia; also in s. South America. The large, thickened, pale sterile palea of this species is unique among panicoids of our region; it is one of several characters that has led to the segregation of *Steinchisma* as a genus, or as a subgenus of *Panicum*. The enlargement of the sterile palea causes the spikelet to spread open, or "gape." [= FNA, K, Z; = *Panicum hians* Elliott – RAB, C, F, G, GW, HC, S, W]

Stenotaphrum Trinius 1820 (St. Augustine Grass)

A genus of about 7 species, tropical and subtropical. References: Allred in FNA (2003a); Sauer (1972)=Z.

Stenotaphrum secundatum (Walter) Kuntze, St. Augustine Grass, Carpet Grass. Cp (FL, GA, NC, SC, VA*): brackish marshes, roadsides, lawns; common. July-October. A pioneer species of beaches and shores, *S. secundatum* was known from the Carolinas prior to 1800. It has been interpreted as native or introduced in our area; its original range is probably now impossible to determine. Sauer (1972) maps it as widespread along the coasts of s. North America, Central America, South America, the West Indies, Africa, Australia, and sw. Pacific Islands. In our area it is certainly now more frequently encountered as a lawn or roadside grass than in anything that could be construed as a natural habitat. The other 6 species in the genus are Asian, or on islands of the sw. Pacific or Indian Oceans. [= RAB, FNA, HC, K, S, WH, Z]

Thinopyrum (Prat) Á. Löve 1980

A genus of about 10 species, perennials, native of w. Asia and the Mediterranean region. References: Barkworth in FNA (2007a); Tucker (1996)=Z; Barkworth (1997)=Y.

- 1 Plants rhizomatous; lemmas 7.5-10 mm long; lateral veins slightly shorter than and less prominent than the midvein *Th. intermedium*
 1 Plants cespitose; lemmas 9-12 mm long; lateral veins of the glumes about as long as and as prominent as the midvein *Th. ponticum*

- * *Thinopyrum intermedium* (Host) Barkworth & D.R. Dewey. Pd (GA): waif in railroad yards; rare, native of Europe and w. Asia. Tucker (1996) states that the record is as a waif in railroad yards. [= K, Z; > *Th. intermedium* spp. *intermedium* – FNA; = *Elytrigia intermedia* (Host) Nevski; = *Agropyron intermedium* (Host) Palisot de Beauvois – HC] {add to synonymy}
- * *Thinopyrum ponticum* (Podpěra) Barkworth & D.R. Dewey, Tall Wheatgrass. Cp (SC): waste areas near wool-combing mills; rare, native of Europe and w. Asia, not known to be established or persistent. [= FNA, K; ? *Agropyron elongatum* (Host) Palisot de Beauvois] {add to synonymy}

***Torreyochloa* G.L. Church 1949 (Pale Mannagrass)**

A genus of 4 species, with a classic Tertiary moist temperate disjunct pattern; *Torreyochloa* is distributed in e. North America and e. Asia. References: Davis in FNA (2007a); Davis (1991)=Y; Tucker (1996)=Z.

- 1 Leaf blades 1-3 mm wide; anthers 0.2-0.5 mm long [*T. pallida* var. *fernaldii*]
- 1 Leaf blades 4-8 mm wide; anthers ca. 1 mm long *T. pallida* var. *pallida*

Torreyochloa pallida* (Torrey) Church var. *pallida, Pale Mannagrass. Mt (GA, NC, VA), Cp (NC, VA), Pd (SC, VA): bogs, mucky wetlands such as old beaver-ponds, pools in cypress swamps, drawdown shores of natural ponds; rare. June-July. The species as a whole is widespread in e. North America. Var. *pallida* ranges from Nova Scotia west to MN, south to e. VA, se. NC (Columbus County), nw. NC (Avery County), and nw. GA (Jones & Coile 1988). Var. *pauciflora* (J. Presl) J.J. Davis is distributed in w. North America. Intermediates occur between the varieties. [= FNA, K, Y, Z; < *Glyceria pallida* (Torrey) Trinius – RAB, GW, HC, W; < *Puccinellia pallida* (Torrey) Clausen – C; = *G. pallida* – F, WV; = *G. pallida* var. *pallida* – G; = *Panicularia pallida* (Torrey) Kuntze – S]

Torreyochloa pallida (Torrey) Church var. *fernaldii* (A.S. Hitchcock) Dore ex Koyama & Koyama, Newfoundland west to MN, south to WV and TN. [= FNA, K, Y, Z; < *Glyceria pallida* (Torrey) Trinius – RAB, GW, HC, W; < *Puccinellia pallida* (Torrey) Clausen – C; = *G. fernaldii* (A.S. Hitchcock) St. John – F, WV; = *G. pallida* var. *fernaldii* A.S. Hitchcock – G]

***Tragus* Haller 1768 (Burgrass)**

A genus of 7 species, annuals and perennials, of tropical and subtropical Eurasia and Africa. References: Wipff in FNA (2007a).

- * *Tragus racemosus* (Linnaeus) Allioni, Stalked Burgrass, Texas Burgrass. Mt (VA), Cp (NC): roadsides, disturbed areas, on ballast near old seaports; rare, native of Mediterranean Europe and w. Asia. [= HC, C, F, FNA, G, K; = *Nazia racemosa* (Linnaeus) Kuntze – S]
- * *Tragus australianus* S.T. Blake, Australian Burgrass. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, native of Australia. [= FNA, K] {not keyed}
- * *Tragus berteronianus* J.A. Schultes, Spiked Burgrass. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, native of Africa and Asia. Also reported from chrome ore piles at Newport News, VA. [= FNA, K] {not keyed}
- * *Tragus heptaneuron* W.D. Clayton. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, native of tropical Africa. [= FNA, K] {not keyed}

***Tridens* Roemer & J.A. Schultes 1817 (Triodia, Redtop, Tridens, Fluffgrass)**

A genus of about 14 species, native to the Western Hemisphere. References: Valdés-Reyna in FNA (2003a).

- 1 Panicle dense and spike-like, > 4× as long as wide, the branches ascending to appressed.
- 2 Plants from elongate rhizomes; lemma 4-5 mm long; spikelet 7-9 mm long *T. carolinianus*
- 2 Plants caespitose; lemma 2.5-3 mm long; spikelet 4-6 mm long *T. strictus*
- 1 Panicle open and spreading, < 4× as long as wide, the branches well-developed and spreading-ascending to reflexed.
- 3 Spikelets 4-5 mm long, 2.5-3.5 mm wide *T. ambiguus*
- 3 Spikelets 6-8 mm long, 1.5-2.2 mm wide.
- 4 Primary pulvini densely pubescent, the hairs encircling the base of the panicle branch; secondary pulvini pubescent; spikelets mostly on pedicels 3-20 mm long; main branches of the inflorescence stiffly spreading *T. chapmanii*
- 4 Primary pulvini glabrous to sparsely pubescent, tufted only in the axil (the upper surface of the panicle branch); secondary pulvini glabrous; spikelets on pedicels mostly < 3 mm long; main branches of the inflorescence spreading, ascending or drooping *T. flavus*

***Tridens ambiguus* (Elliott) J.A. Schultes**, Pineland Triodia, Flatwoods Fluffgrass. Cp (FL, GA, NC, SC): wet savannas, clay-based Carolina bays; uncommon (rare north of GA). August-October. S. NC south to FL, west to e. TX. [= RAB, FNA, GW, HC, K; = *Triodia elliotii* Bush – S]

***Tridens carolinianus* (Steudel) Henrard**, Carolina Triodia, Carolina Fluffgrass. Cp (FL, GA, NC, SC): mesic swales in sandhills; uncommon (rare north of FL). August-October. S. NC south to FL, west to LA. [= RAB, FNA, HC, K; = *Triodia drummondii* Scribner & Kearney – S]

***Tridens chapmanii* (Small) Chase**, Chapman's Triodia. Cp (FL, GA, NC, SC, VA): loamy sands of disturbed longleaf pine woodlands, roadsides; rare. August-October. NJ south to FL, west to TX and OK. [= HC; = *Tridens flavus* (Linnaeus) A.S.]

Hitchcock var. *chapmanii* (Small) Shinnery – RAB, C, FNA, K; = *Triodia chapmanii* (Small) Bush – F, G; < *Triodia flava* (Linnaeus) Smyth – S]

Tridens flavus (Linnaeus) A.S. Hitchcock, Redtop, Tall Redtop, Purpletop Tridens, Greasy Grass. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides, disturbed areas, glades; common. July-October. NH west to NE, south to FL and TX. [= HC; = *Tridens flavus* var. *flavus* – RAB, C, FNA, K; = *Triodia flava* (Linnaeus) Smyth – F, G, WV; < *Triodia flava* (Linnaeus) Smyth – S (also see *Tridens chapmanii*); < *Tridens flavus* – W]

Tridens strictus (Nuttall) Nash, Spike Triodia, Longspike Fluffgrass, Longspike Tridens. Cp (FL, GA, NC, SC, VA), Pd (GA, SC, VA): sandhills, moist pine savannas, roadsides; rare. August-October. S. VA south to AL, west to TX, north in the interior to IL and KS. It is possible that this grass is introduced only north and east of GA (thus in our entire area). Rhoads & Klein (1993) report an old specimen from w. PA. [= RAB, FNA, GW, HC, K; = *Triodia stricta* (Nuttall) Bentham ex Vasey – F, G, S]

***Triplasis* Palisot de Beauvois 1812 (Sandgrass)**

A genus of 2 species, of eastern and central North America south through Mexico to Costa Rica. References: Hatch in FNA (2003a).

Identification notes: The foliage of both of our species has a sour taste.

- 1 Lemma awn 4.5-8 mm long; culm internodes appressed pilose or puberulent; perennial..... *T. americana*
 1 Lemma awn 0.5-1.5 mm long; culm internodes glabrous to minutely scaberulous; annual (or rarely perennial) *T. purpurea* var. *purpurea*

Triplasis americana Palisot de Beauvois, Southern Sandgrass. Cp (FL, GA, NC, SC): open sandy areas; common. August-October. A Southeastern Coastal Plain endemic: NC south to s. FL, west to e. LA. [= RAB, FNA, HC, K, S]

Triplasis purpurea (Walter) Chapman var. *purpurea*, Purple Sandgrass. Cp (FL, GA, NC, SC, VA): dunes, maritime dry grasslands, open sandy areas; common. September-October. NH south to s. FL, and west to TX, along the coast; also around the Great Lakes, and in central United States. Var. *caribensis* R.W. Pohl is in the New World tropics. [= FNA; < *T. purpurea* – RAB, C, F, G, HC, K; > *T. intermedia* Nash – S; > *T. purpurea* – S]

***Tripsacum* Linnaeus 1759 (Gamma Grass)**

A genus of about 12 species, tropical and subtropical American. References: Barkworth in FNA (2003a); DeWet, Harlan, & Brink (1982)=Z.

Tripsacum dactyloides (Linnaeus) Linnaeus var. *dactyloides*, Gamma Grass. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): roadsides, moist areas, disturbed areas, moist riverbanks; common (uncommon in VA). Late May-November. *T. dactyloides* is widespread in e. North America north to MA, MI, IA, and NE, ranging south into tropical Central and South America; var. *dactyloides* is North American. This important species of moist and wetland areas in the Great Plains is generally seen in disturbed habitats in our area; its original habitats in our area (if indeed it was native in the flora area) are poorly understood. [= FNA, Z; < *T. dactyloides* – RAB, C, G, HC, K, S, W, WV; > *T. dactyloides* var. *dactyloides* – F; > *T. dactyloides* var. *occidentale* Cutler & Anderson – F]

***Trisetum* Persoon 1805 (Oat-grass)**

A genus of about 75-85 species, north and south temperate. References: Rumely in FNA (2007a); Randall & Hilu (1986)=Z; Tucker (1996)=Y. [also see *Sphenopholis*]

Trisetum spicatum (Linnaeus) K. Richter, Alpine Oat-grass, Spike Trisetum. Mt (NC, VA): mountain cliffs at high elevations on metabasalt; rare. June-August. A circumboreal species, widespread and common in arctic and alpine areas, south in e. North America to New England, NY, and rarely, PA, and disjunct to Hawksbill Mountain, Page County, VA (where extant) and Roan Mountain, Mitchell County, NC (where not seen since the nineteenth century). The species is also known from the West Indies, Mexico, and s. South America. *T. spicatum*, as broadly treated here, following Randall & Hilu (1986), is polymorphic and consists of several ploidies. [= C, FNA, HC, K, S, Y, Z; > *T. spicatum* var. *molle* (Michaux) Beal – RAB, F, G; > *T. triflorum* (Bigelow) Löve & Löve ssp. *molle* (Michaux) Löve & Löve – W; > *T. spicatum* var. *maidenii* (Gandoger) Fernald – F]

***Triticum* Linnaeus 1753 (Wheat)**

A genus of about 25 species (the taxonomy complicated by extensive and ancient cultivation), native of w. and c. Asia. References: Morrison in FNA (2007a); Tucker (1996)=Z; Zohary & Hopf (1994).

* *Triticum aestivum* Linnaeus, Bread Wheat. Cp, Pd, Mt (GA, NC, SC, VA): fields; frequently cultivated, rarely persistent or volunteering following cultivation, native of Eurasia. May-June. One of the most important crops in the world. The lemmas can either be awnless or with long awns (to 8 cm long). [= RAB, C, F, FNA, G, HC, K, Z]

Uniola Linnaeus 1753 (Sea Oats)

A genus of 2 species. The only other species of the genus ranges from Baja California south along the Pacific Ocean to Ecuador; other species previously treated in *Uniola* have been shown to be only distantly related and are now treated as *Chasmanthium*. References: Yates in FNA (2003a); Yates (1966a, 1966b)=Z. [also see *Chasmanthium*]

Uniola paniculata Linnaeus, Sea Oats. Cp (FL, GA, NC, SC, VA): abundant on unforested primary and secondary dunes on barrier islands, and on dry to mesic sand flats and interdune swales; common (rare in VA). June-November. Se. VA south to FL and west to TX and Mexico; West Indies. This is the most important sand-binding grass on ocean dunes from NC south, playing a critical role in primary succession on dunes. It is against the law in NC to pick or destroy *Uniola paniculata*. [= RAB, C, F, FNA, G, HC, K, S, Z]

Urochloa Palisot de Beauvois 1812 (Para-grass, Signal-grass)

A genus of about 100 species, pantropical and subtropical. References: Crins (1991)=Z; Webster (1988)=Y; Wipff & Thompson in FNA (2003a). Key adapted in part from GW. [also see *Megathyrsus*]

- 1 Spikelets suffused with purple, borne in pairs (or threes) in each row *U. mutica*
- 1 Spikelets green, borne singly in each row.
 - 2 Upper half of second glume and first lemma with evident transverse veins connecting the longitudinal veins; spikelets 3.5-4.7 mm long *U. platyphylla*
 - 2 Upper half of second glume and first lemma without evident transverse veins, or with very obscure cross-veins; spikelets either 2-4 mm or 5-6 mm long.
 - 3 Spikelets 2-4 mm long..... *U. ramosa*
 - 3 Spikelets 5-6 mm long..... *U. texana*

* *Urochloa mutica* (Forskål) Nguyen, Para-grass. Cp (SC): margin of pond; rare, native of Africa. August. [= FNA, K, Z; ? *Panicum purpurascens* Raddi – RAB, HC; ? *B. purpurascens* (Raddi) Henrard – GW; = *Brachiaria mutica* (Forskål) Stapf]

* *Urochloa platyphylla* (Munro ex Wright) R. Webster, Broadleaf Signal-grass. Cp (FL, GA, NC, SC, VA), Pd (GA, SC, NC, VA), Mt (VA): disturbed wet or seasonally moist areas; rare, apparently native of South America. E. NC south to FL, west to TX, north in the interior to AR, OK, and se. MO; also in MD (Terrell & Reveal 1996). [= FNA, K, Y, Z; = *Brachiaria platyphylla* (Munro ex Wright) Nash – RAB, GW, HC; ? *B. extensa* Chase – S]

* *Urochloa ramosa* (Linnaeus) Nguyen, Browntop Millet, Dixie Signalgrass. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): disturbed areas; rare, native of tropical Africa and Asia. This species has apparently been widely planted for wildlife food and erosion control in southeastern states. [= FNA, K, Z; = *Panicum ramosum* Linnaeus – HC; = *Brachiaria ramosa* (Linnaeus) Stapf]

* *Urochloa texana* (Buckley) R. Webster, Texas Millet, Texas Signalgrass. Cp (FL, GA, NC, SC, VA), Pd (GA, SC): disturbed areas, fields, gardens; uncommon (rare in VA), native of TX. First reported for South Carolina by Hill & Horn (1997). [= K, Y, Z; = *Panicum texanum* Buckley – RAB, C, HC, S; = *Brachiaria texana* (Buckley) S.T. Blake]

* *Urochloa adpersa* (Trinius) R. Webster. Cp (FL): moist, sunny, disturbed areas; rare, apparently native of s. FL, the West Indies, and Argentina. Reported from AL, FL peninsula and Panhandle (FNA), and chrome ore piles in Newport News, VA (Reed 1964). [= FNA, K] {not keyed; add to synonymy}

Urochloa fusca (Swartz) B.F. Hansen & Wunderlin var. *reticulata* (Torrey) B.F. Hansen & Wunderlin, east to GA (Kartesz 1999). [*Urochloa fusca* – FNA; ? *Urochloa fasciculata* (Sw.) R. Webster – K; ? *Panicum fasciculatum* Swartz – HC] {not yet keyed; synonymy incomplete}

* *Urochloa plantaginea* (Link) R. Webster. Cp (GA): Reported for s. GA by Jones & Coile (1988), as *Brachiaria plantaginea*. [= FNA, K, Y, Z; = *Brachiaria plantaginea* (Link) A.S. Hitchcock] {not yet keyed; synonymy incomplete}

Urochloa reptans (Linnaeus) Stapf. Cp (GA): [= FNA, K] {not yet keyed; synonymy incomplete}

* *Urochloa villosa* (Lamarck) Nguyen, Hairy Signalgrass. Reported from chrome ore piles in Newport News, VA (Reed 1964); native of tropical Asia and Africa. [= FNA, K] {not keyed; add to synonymy}

Vulpia C.C. Gmelin 1805 (Annual Fescue)

A genus of about 30 species, north and south temperate. References: Lonard in FNA (2007a); Tucker (1996)=Z. Key based in part on C.

- 1 First glume < ½ as long as the second glume *V. myuros*
- 1 First glume > ½ as long as the second glume.
 - 2 Lemma pubescent; lowest lemma 2.5-3.5 mm long; grains 1.5-2 mm long..... *V. sciurea*
 - 2 Lemma glabrous or scabrous; lowest lemma 2.7-7 mm long; grains 1.7-3.3 mm long.

- 3 First glume 1.7-4.5 mm long; lemma awns 3-12 mm long; spikelets with 4-7 loosely imbricate florets; rachilla internodes mostly 0.9-1.1 mm long..... *V. bromoides*
- 3 First glume 3.5-5 mm long; lemma awns 0.3-6 (-9) mm long; spikelets with 5-11 (-more) closely imbricate florets; rachilla internodes mostly 0.5-0.7 mm long.
- 4 Spikelets 4-5.5 mm long; awn of the lowest lemma 2.5-6 (-9) mm long..... *V. octoflora* var. *glauca*
- 4 Spikelets 5.5-10 mm long; awn of the lowest lemma 0.3-3 mm long..... *V. octoflora* var. *octoflora*

* *Vulpia bromoides* (Linnaeus) S.F. Gray, European Squirreltail Fescue, Brome Fescue. Cp (FL, VA): sandy disturbed areas; rare, native of Eurasia. [= C, FNA, K, Z; = *Festuca dertonensis* (Allioni) Ascherson & Graebner – G, HC]

* *Vulpia myuros* (Linnaeus) K.C. Gmelin, Rat-tail Fescue. Cp (FL, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): roadsides, fields, disturbed areas; common (rare in FL), native of Eurasia. May-June. [= C, F, FNA, K, Z; = *Festuca myuros* Linnaeus – RAB, G, HC, S, W, WV]

Vulpia octoflora (Walter) Rydberg var. *glauca* (Nuttall) Fernald, Northern Six-weeks Fescue. {Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common.} April-June. S. ME west to British Columbia, south to GA, AR, TX, and CA. [= C, FNA, K; < *Festuca octoflora* Walter – RAB, GW, S, W, WV; = *Vulpia octoflora* var. *tenella* (Willdenow) Fernald – F; = *Festuca octoflora* Walter var. *tenella* (Willdenow) Fernald – G, HC; < *Vulpia octoflora* – Z]

Vulpia octoflora (Walter) Rydberg var. *octoflora*, Southern Six-weeks Fescue. {Cp (FL, GA, NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common.} April-June. S. NJ south to FL, west to TX, north in the interior to MO and OK. [= C, F, FNA, K; < *Festuca octoflora* Walter – RAB, GW, S, W, WV; > *Festuca octoflora* var. *aristulata* Torrey ex L.H. Dewey – G; = *Festuca octoflora* var. *octoflora* – HC; < *Vulpia octoflora* – Z]

Vulpia sciurea (Nuttall) Henrard, Squirreltail Fescue. Cp (FL, GA, NC, SC, VA), Pd (GA): sandy roadsides, fields, disturbed areas; common (uncommon in VA). April-May. S. NJ south to n. peninsular FL, west to TX, and north in the interior to MO. [= FNA, Z; = *Vulpia elliptea* (Rafinesque) Fernald – C, F, K; = *Festuca sciurea* Nuttall – RAB, G, HC, S]

Zea Linnaeus 1753 (Corn, Maize)

A genus of about 5 species, native of Mexico and Central America. References: Iltis in FNA (2003a).

- 1 Pistillate spikelets (kernels) borne on a spongy rachis (cob) in rows..... *Z. mays* ssp. *mays*
- 1 Pistillate spikelets embedded in a hardened rachis.
- 2 Annual..... [*Z. mays* ssp. *mexicana*]
- 2 Perennial from creeping rhizomes..... *Z. perennis*

* *Zea mays* Linnaeus ssp. *mays*, Corn, Maize. Cp, Pd, Mt (GA, NC, SC, VA): very commonly cultivated, rarely volunteering in old fields or around trashpiles; common in cultivation, rare as a short-lived escape. June-October. *Zea* is one of the most important cultivated plants in the world, originating in Mexico, probably from *Zea mays* ssp. *parviglumis* Iltis & Doebley. It was initially cultivated in sw. Mexico (before 8000 BP), spreading to the sw. United States before 5000 BP, and to the e. United States by 2000 years BP. At the time of European contact, *Zea mays* ssp. *mays* was an important staple crop from s. Canada south to s. South America (Hancock 2004). [= FNA, K; < *Z. mays* – RAB, F, HC, S]

* *Zea perennis* (A.S. Hitchcock) Reeves & Manglesdorf, Mexican Teosinte. Cp (SC): disturbed areas; rare, apparently established at least formerly. *Z. perennis* was considered by HC to be "established on James Island, S.C." [= K; = *Euchlaena perennis* A.S. Hitchcock – HC]

* *Zea mays* (Schrader) Kuntze ssp. *mexicana* (Schrader) H.H. Iltis, Chalco Teosinte, Nobogame Teosinte. Reported for AL (Kartesz 1999) and FL (Hansen & Wunderlin 2006). HC state that this taxon is "occasionally cultivated in the Southern States for green forage" and is similar to *Z. perennis*, except in being, like *Z. mays* ssp. *mays*, a coarse annual. It is considered to be an ancestor of *Zea mays*. [= FNA; = *Z. mexicana* (Schrader) Kuntze – K; = *Euchlaena mexicana* Schrader – HC, S]

Zizania Linnaeus 1753 (Wild-rice)

A genus of 4 species (and 6 taxa) of northern and eastern North America. References: Terrell in FNA (2007a); Terrell et al. (1997)=Y; Tucker (1988)=Z; Judziewicz et al. (2000)=X. Key based on Terrell in FNA (2007a).

- 1 Lemmas of the pistillate spikelets flexible and chartaceous, dull, bearing short scattered hairs, these not or only slightly more dense toward the tip..... *Z. aquatica* var. *aquatica*
- 1 Lemmas of the pistillate spikelets stiff and coriaceous, lustrous, glabrous or with lines of short hairs, the tips usually more hairy..... [*Z. palustris* var. *palustris*]

Zizania aquatica Linnaeus var. *aquatica*, Southern Wild-rice. Cp (FL, GA, NC, SC, VA): freshwater marshes, usually tidal; common (uncommon in NC). May-October. Var. *aquatica* ranges from ME west to WI, south to FL and LA; var. *brevis* Fassett is restricted to the St. Lawrence River in Québec. *Zizania* was formerly an important food for Amerindians; it is now gathered as a specialty grain, commanding high prices. [= C, F, FNA, G, HC, K, X, Y, Z; < *Z. aquatica* – RAB, GW, S, WV]

* *Zizania palustris* Linnaeus var. *palustris*, Northern Wild-rice. Reported for a single county in WV, where apparently introduced. [= FNA; = *Z. aquatica* Linnaeus var. *angustifolia* Hitchcock – F, HC] {add synonymy}

Zizaniopsis Döll & Ascherson 1871 (Giant Cutgrass)

A genus of about 5 species, of tropical and subtropical America. References: Terrell in FNA (2007a); Tucker (1988)=Z; Judziewicz et al. (2000)=Y.

Identification notes: Superficially similar to *Zizania* in its habitat and large size, *Zizaniopsis* may be distinguished by its very different inflorescence and by its stout horizontal rhizomes (*Zizania* is annual or perennial, but not rhizomatous).

Zizaniopsis miliacea (Michaux) Döll & Ascherson, Giant Cutgrass, Southern Wild-rice, Water-millet. Cp: brackish and freshwater marshes; common. May-July. MD south to FL, west to TX, north in the interior to MO, and disjunct in w. Mexico. The other species of the genus are South American. [= RAB, C, F, FNA, G, GW, HC, K, S, Y, Z; = *Zizania miliacea* Michaux]

Zoysia Willdenow 1801 (Zoysia, Temple-grass)

A genus of about 11 species, perennials, of tropical, subtropical, and temperate Asia. References: Anderson in FNA (2003a). Key closely following FNA.

- 1 Leaves < 0.5 mm wide; racemes with 3-12 spikelets; peduncles included to extending < 1 cm beyond the sheaths of the flag leaves *Z. pacifica*
- 1 Leaves 0.5-5 mm wide; racemes with 10-50 spikelets; peduncles extending (0.3-) 1-6.5 cm beyond the sheaths of the flag leaves.
 - 2 Pedicels 1.6-3.5 mm long; spikelets ovate, 1.1-4 mm wide; culm internodes 2-10 mm long; blades ascending..... *Z. japonica*
 - 2 Pedicels 0.6-1.6 mm long; spikelets lanceolate, 0.6-1.0 mm wide; culm internodes 5-40 mm long, all plants with at least some internodes > 14 mm long; blades spreading at nearly 90 degree angles..... *Z. matrella*
- * *Zoysia japonica* Steudel, Japanese Lawngrass, Korean Lawngrass, Zoysia. Cp (AL, LA): used as a lawngrass, persisting or spreading; rare, native of Japan. Reported for VA (Kartesz 1999). [= C, FNA, HC, K]
- * *Zoysia matrella* (Linnaeus) Merrill, Zoysia, Manila Temple-grass. Cp (AL, FL), Pd (GA): used as a lawngrass, persisting or spreading; rare, native of the Philippines. [= K; = *Z. matrella* – FNA, HC; = *Z. matrella* var. *matrella* – K]
- * *Zoysia pacifica* (Goudswaard) M. Hotta & Kuroki, Mascarene-grass, Korean Velvetgrass. Cp (LA): used as a lawngrass, persisting or spreading; rare, native of {}. [= FNA; ? *Z. tenuifolia* Willdenow – HC; > *Z. tenuifolia* Willdenow – K; > *Z. matrella* var. *pacifica* Goudswaard – K]

PONTEDERIACEAE Kunth 1816 (Pickerelweed Family)

A family of about 9 genera and 33 species, primarily of the tropics, but with some temperate representatives. References: Rosatti (1987a); Cook in Kubitzki (1998b); Horn in FNA (2002a).

- 1 Plant floating (or stranded by dropping water levels), the petioles expanded into air-filled floats; perianth lobes 3-4 cm long..... *Eichhornia*
- 1 Plant rooted, the petioles not adapted as floats; perianth lobes 0.4-1.0 cm long.
 - 2 Leaves lanceolate to ovate, 1.5-10× as long as wide, the base cordate, truncate, or cuneate; flowers 2-lipped; corolla blue, marked with yellow; stamens 6 (3 each of 2 different lengths) *Pontederia*
 - 2 Leaves either reniform, 0.5-1.5× as long as wide, the base cordate, or narrowly linear, 20-50× as long as wide, the base attenuate; flowers radially symmetrical; corolla white, pale blue, or yellow; stamens 3..... *Heteranthera*

Eichhornia Kunth 1842 (Water Hyacinth)

A genus of 7-8 species, native of tropical America and Africa, but now introduced widely in warm regions. References: Cook in Kubitzki (1998b); Horn in FNA (2002a).

- * *Eichhornia crassipes* (Martius) Solms-Laub, Water Hyacinth. Cp (GA, NC, SC, VA), Pd (GA, NC): ponds, ditches, sluggish water; uncommon, native of South America. June-September. *E. crassipes* is "generally considered the world's most serious aquatic weed" (Rosatti 1987). Originally native to tropical South America, *E. crassipes* is now a widespread naturalized weed throughout the tropics and subtropics. In the northern part of our area, water hyacinth is rare, probably not long persisting. Further south, it can be an aggressive aquatic weed. [= RAB, C, F, FNA, G, GW, K; = *Piaropus crassipes* (Martius) Rafinesque – S]

Heteranthera Ruiz & Pavón 1794 (Mud-plantain)

A genus of 10-12 species, of tropical and temperate America and tropical Africa. References: Cook in Kubitzki (1998b); Horn (1998)=Z; Horn in FNA (2002a). Key based in part on FNA.

- 1 Leaves narrowly linear, 20-50× as long as wide, the base attenuate; flowers solitary, the corolla yellow; stamens and anthers all alike.....

- *H. dubia*
- 1 Leaves reniform, 0.5-1.5× as long as wide, the base cordate; flowers 1-several, the corolla white or pale blue; stamens and anthers dimorphic.
- 2 Spathe with 2-several flowers; perianth tube 3-12 mm long.
- 3 Anthers and filaments with dark purple hairs; internode below the spathe < 1 cm long; spike with (3-) 7-16 flowers, typically elongating well out of the spathe *H. multiflora*
- 3 Anthers and filaments with white hairs; internode below the spathe > 1 cm long; spike with 2-8 flowers, typically mostly included within the spathe..... *H. reniformis*
- 2 Spathe with solitary flower; perianth tube 11-45 mm long.
- 4 Vegetative stems elongating only in water deeper than 5 cm; blades of petiolate leaves oblong to ovate, the base truncate to cuneate; perianth tube 15-45 mm long..... [*H. limosa*]
- 4 Vegetative stems commonly elongating; blades of petiolate leaves round to oblong, the base cordate to truncate; perianth tube 11-29 mm long..... [*H. rotundifolia*]

Heteranthera dubia (Jacquin) MacMillan, Water Stargrass. Mt (NC, VA), Pd (VA), Cp (VA): streams, rivers; uncommon (rare in NC). Late July-September. Québec west to WA, south to Cuba and Central America, but rare or absent in much of the se. United States. The attribution of this species to SC is in error (as by Kartesz 1999), based on a misidentified specimen (C. Horn, pers. comm.). [= RAB, F, FNA, GW, K, W; = *Zosterella dubia* (Jacquin) Small – C, G, S]

Heteranthera multiflora (Grisebach) Horn. Cp (NC, VA): in shallow, stagnant water in floodplains, or emerged on mud; rare (NC Watch List). June-October. IL west to NE, south to MS; also on the Atlantic Coastal Plain from NJ south through PA to ne. NC; also in South America (Brazil, Paraguay, Argentina, and Venezuela). [= C, FNA, K, Z]

Heteranthera reniformis Ruiz & Pavón. Cp (NC, VA), Pd (GA, NC, SC, VA): in shallow, stagnant water in floodplains, or emerged on mud; uncommon (SC Rare). June-October. CT west to NE, south to FL and TX and into South America. First reported for South Carolina by Hill & Horn (1997). [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Heteranthera limosa (Swartz) Willdenow occurs east to TN, KY, and FL (Kartesz 1999); it is attributed to VA in Small (1933), but the documentation is not known. [= FNA, C, F, G, K, S, Z]

Heteranthera rotundifolia (Kunth) Grisebach. Ponds. Midwestern, as a rare disjunct east to c. KY (Larue County) (Medley 1993). [= FNA, C, K, Z]

Pontederia Linnaeus 1753 (Pickerelweed)

A genus of 3-6 species, from North America to South America. References: Lowden (1973)=Z; Cook in Kubitzki (1998b); Horn in FNA (2002a).

- 1 Floral tube villous when young, essentially glabrous to sparsely glandular in maturity; leaves primarily ovate to triangular-lanceolate, 2.2-21 cm wide, the base generally cordate or truncate (rarely cuneate)..... *P. cordata* var. *cordata*
- 1 Floral tube persistently pubescent with short glandular hairs; leaves lanceolate, 0.4-8.3 cm wide, the base generally cuneate to truncate *P. cordata* var. *lanceifolia*

Pontederia cordata Linnaeus var. *cordata*, Heartleaf Pickerelweed. Cp, Pd (GA, NC, SC, VA), Mt (NC): marshes, pond-shores, lake-shores; common, uncommon in Piedmont, rare in Mountains. May-October. Nova Scotia west to MN, south to FL and TX; Belize; s. Brazil, Argentina, Paraguay, and Uruguay. The recognition of infraspecific taxa in *Pontederia cordata* is controversial and requires additional study. *P. cordata* exhibits tristylly, an interesting breeding system. Each plant has one of 3 types of flowers: (a) a short style, 3 medium and 3 long stamens, (b) a medium style, 3 short and 3 long stamens, or (c) a long style, 3 short and 3 medium stamens. [= GW, Z; < *P. cordata* – RAB, C, FNA, K, W; = *P. cordata* – F, G, S]

Pontederia cordata Linnaeus var. *lanceifolia* (Muhlenberg ex Elliott) Torrey, Lanceleaf Pickerelweed. Cp (GA, NC, SC): marshes, pond-shores, lake-shores; rare. May-October. S. MA (alleged to occur as far north as ME, but these reports may be entirely based on misidentifications of var. *cordata*) to s. FL, west to e. TX, mostly on the Coastal Plain, with a few records around the Great Lakes; Cuba; s. Brazil, Argentina, Paraguay, and Uruguay. A third variety of *P. cordata*, var. *ovalis* (Martens in Roemer & Schultes) Solms in A.P. de Candolle, is restricted to South America. [= GW, Z; < *P. cordata* – RAB, C, FNA, K, W; = *P. lanceolata* Nuttall – F, G, S]

POTAMOGETONACEAE Dumortier 1829 (Pondweed Family)

A family of 6-7 genera and about 100 species (if circumscribed, as here, to include Zannichelliaceae), aquatic herbs, nearly cosmopolitan. Here circumscribed following recent molecular studies to include *Zannichellia* (Lindqvist et al. 2006; Angiosperm Phylogeny Group 2003). References: Haynes & Hellquist in FNA (2000); Haynes (1978); Les & Haynes (1996); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b); Wiegleb & Kaplan (1998)=Z; Lindqvist et al. (2006). [including **ZANNICHELLIACEAE**]

- 1 Leaves opposite *Zannichellia*
- 1 Leaves alternate.
- 2 Stipules not adnate, or adnate to the blade < ½ the length of the stipule; peduncle stiff, the flowering spike elevated above the water's surface; submersed leaves translucent, flat, flexible; floating leaves present or absent *Potamogeton*
- 2 Stipules adnate to the blade for at least 2/3 the length of the stipule; peduncle flexible, the flowering spike submersed; submersed leaves opaque, channeled, stiff; floating leaves absent *Stuckenia*

Potamogeton Linnaeus 1753 (Pondweed)

A genus of about 80 species, aquatic herbs, nearly cosmopolitan. References: Haynes & Hellquist in FNA (2000); Haynes & Hellquist (1996); Wiegleb & Kaplan (1998). Treatment adapted from Haynes & Hellquist in FNA (2000). [also see *Stuckenia*]

- 1 Stipular sheaths of submersed leaves adnate with leaf blade base, the tip usually projecting as a ligule **Key A**
- 1 Stipular sheaths of submersed leaves free from the leaf blade base, or with only a few adnate, the ligule not obvious.
 - 2 Submersed leaves broadly linear-oblong to lanceolate to elliptic or nearly orbicular, 10-58 mm wide (occasional stranded forms lack submersed leaves)..... **Key B**
 - 2 Submersed leaves linear, thread-like or ribbon-like, 0.1-10 mm wide..... **Key C**

Key A

- 1 Leaves stiffish, conspicuously 2-ranked, auriculate-lobed to rounded at the junction with the stipule, with 20-60 fine veins..... *P. robbinsii*
- 1 Leaves lax, not conspicuously 2-ranked, lacking basal lobes, with fewer than 20 veins.
 - 2 Tips of submersed leaves obtuse to acute; floating leaves rounded at apex.
 - 3 Tips of submersed leaves acute; fruit 1-2 mm wide, the lateral keel with acute tips, beak minute..... *P. diversifolius*
 - 3 Tips of submersed leaves obtuse; fruit 1.3-2.4 mm wide, the lateral keel with blunt tips, beak lacking *P. spirillus*
 - 2 Tips of submersed leaves acute to long-tapering; floating leaves acute at apex.
 - 4 Submersed leaves 0.1-0.6 mm wide, without obvious lacunae; floating leaves 3-7 veined..... *P. bicupulatus*
 - 4 Submersed leaves 0.2-1 (-2) mm wide, with abundant lacunae; floating leaves 9-23 veined..... *P. tennesseeensis*

Key B

- 1 Leaf margins conspicuously serrate; stem flattened; fruit beak 2-3 mm long; turions commonly formed, hard..... *P. crispus*
- 1 Leaf margins entire; stem terete; fruit beak < 1 mm long; turions rarely formed.
 - 2 Submersed leaves clasping the stem; floating leaves absent.
 - 3 Rhizomes spotted rusty-red; leaf tips cucullate, splitting when pressed; stipules usually persistent and conspicuous..... [*P. praelongus*]
 - 3 Rhizomes unspotted; leaf tips flat, not splitting when pressed; stipules deciduous or deteriorating into fibers.
 - 4 Leaves orbicular to ovate, often lanceolate in soft water, 1-6 cm long, with 3-25 delicate veins; stipules deteriorating and deciduous, absent on lower portions of stem..... *P. perfoliatus*
 - 4 Leaves ovate-lanceolate to narrowly lanceolate, 1.6-13 cm long, with 3-35 coarse veins; stipules disintegrating to persistent fibers, even on lower portions of stem..... [*P. richardsonii*]
 - 2 Submersed leaves petioled or sessile, not clasping the stem; floating leaves absent or present.
 - 5 Submersed leaves 19-49 veined, distinctly arcuate *P. amplifolius*
 - 5 Submersed leaves with fewer than 29 veins, not arcuate.
 - 6 Stems conspicuously black-spotted; submersed leaves crisped along the margin; floating leaves 15-21 veined *P. pulcher*
 - 6 Stems inconspicuously spotted or lacking spots; submersed leaves flat along the margin; floating leaves 7-29 veined.
 - 7 Submersed leaves with petioles 1-13 cm long.
 - 8 Larger submersed leaves acute at the apex with a sharp awl-like tip; fruit gray-green to olive-green, with well-developed lateral ridges..... *P. illinoensis*
 - 8 Larger submersed leaves acute at the apex but lacking a sharp awl-like tip; fruit red to reddish-brown, with muricate lateral ridges..... *P. nodosus*
 - 7 Submersed leaves sessile.
 - 9 Stipules blunt; submersed leaves 7 veined; fruit plump, stalked, tawny-olive..... [*P. alpinus*]
 - 9 Stipules acute; submersed leaves 3-19 veined; fruit laterally compressed, not stalked, reddish-brown, gray-green, or olive-green.
 - 10 Fruit reddish-brown, with obsolete or rounded keel; submersed leaves with (3-) 5-9 veins..... *P. gramineus*
 - 10 Fruit gray-green or olive-green, with well-developed keel; submersed leaves with 7-19 veins *P. illinoensis*

Key C

- 1 Fruit with a prominent keel 0.2-1.2 mm broad; floating leaves often present; lacunae prominent in submersed leaves.
 - 2 Submersed leaves 3-13 veined; stipules of submersed leaves not adnate to the leaf base; floating leaves rounded at apex..... *P. epihydrus*
 - 2 Submersed leaves 1-3 (-7) veined; stipules of at least some submersed leaves adnate to the leaf base; floating leaves acute at apex..... *P. tennesseeensis*
- 1 Fruit with a keel < 0.2 mm broad; floating leaves absent or present; lacunae present in some species, but generally not prominent.
 - 3 Floating leaves present, at least in some plants of the population.
 - 4 Floating leaves 0.3-1.6 cm long; peduncle 0.6-1.5 cm long; fruit < 2.5 mm long..... [*P. vaseyi*]
 - 4 Floating leaves 1.5-12 cm long; peduncle 2.5-3.5 mm long; fruit 2.5-5 mm long.
 - 5 Petiole junction with leaf distinctly pale in color; floating leaves ovate, oblong-ovate, cordate at base, rarely tapering *P. natans*
 - 5 Petiole junction with leaf lacking pale color; floating leaves elliptical, ovate-elliptical, or oblong-elliptical.
 - 6 Floating leaves 7-12 mm wide, tapering at both ends; fruit apparently not produced..... [*P. floridanus*]
 - 6 Floating leaves 10-20 (-30) mm wide, obtuse, round or tapering at the base; fruit often produced..... *P. oakesianus*
 - 3 Floating leaves absent from all plants in the population.
 - 7 Rhizomes obvious; peduncle 5-25 cm long; leaves thread-like, 0.1-0.5 mm wide..... *P. confervoides*
 - 7 Rhizomes absent or not apparent; peduncle 0.3-7 cm long, often curved; leaves usually not thread-like, 0.1-5 mm wide.
 - 8 Nodal glands absent.

- 9 Leaves 15-35 veined, > 2 mm wide; stem conspicuously flattened; peduncles terminal, usually straight *P. zosteriformis*
- 9 Leaves 3-5 veined, usually < 2 mm wide; stem terete; peduncles usually axillary, recurved.
- 10 Leaves acute, 3 (-5) veined, 0.3-1.5 (-2.3) mm wide; fruits 1-keeled, 1.4-2.3 (-2.7) mm long *P. foliosus* var. *foliosus*
- 10 Leaves usually bristle-tipped, occasionally apiculate to blunt, 3 veined, 1-2.2 (-4) mm wide; fruits 3-keeled, 2.3-4 mm long.....
..... *P. hillii*
- 8 Nodal glands present.
- 11 Stipules fibrous, often whitish.
- 12 Leaf apex acute or apiculate; leaves 5-7 (-9) veined; turions with inner leaves at a right angle to outer leaves [*P. friesii*]
- 12 Leaf apex usually bristle-tipped, acute or rarely obtuse to apiculate; leaves 3-5 (-7) veined; turions flattened with inner and outer leaves in same plane *P. strictifolius*
- 11 Stipules not fibrous, usually delicate, green, brown, or white.
- 13 Leaf apex bristle-tipped (rarely apiculate); peduncles recurved, axillary or axillary and terminal, 0.5-6.6 cm long *P. hillii*
- 13 Leaf apex blunt, acute, or apiculate, but not bristle-tipped; peduncles straight, terminal, 0.5-6.6 cm long.
- 14 Mature fruit obovate, sides concave, beak mostly forward; peduncle filiform to cylindrical, usually 1-3 per plant; inflorescence usually interrupted; leaves with up to 2 rows of lacunae along midrib, apex acute, rarely apiculate; stipules mostly connate *P. pusillus* var. *pusillus*
- 14 Mature fruit mostly widest at middle, or ovate, sides rounded, beak mostly central; peduncle cylindrical, usually > 3 per plant; inflorescence continuous; leaves with 1-5 rows of lacunae along midrib, apex acute to obtuse; stipules mostly convolute *P. pusillus* var. *tenuissimus*

Potamogeton amplifolius Tuckerman, Bigleaf Pondweed. Cp (NC, VA), Pd (VA), Mt (GA, VA): ponds, lakes, sluggish streams; rare (GA Special Concern, VA Rare). June-September. Newfoundland west to British Columbia, south to e. NC, nw. GA (Jones & Coile 1988), n. AL, OK, and CA. [= RAB, C, F, FNA, G, K, S, W, WV, Z]

Potamogeton bicupulatus Fernald. Mt (VA): quiet waters; rare. July-September. ME west to WI, south to VA (Augusta County) and se. TN. [= FNA, F, K, Z; = *P. diversifolius* Rafinesque var. *trichophyllus* Morong – C, GW]

Potamogeton confervoides Reichenbach, Alga Pondweed, Conferva Pondweed, Tuckerman's Pondweed. Cp (NC, SC): acidic blackwater pools and streams; rare (NC Rare). April-September. Newfoundland west to Ontario, south to NJ and PA; disjunct in sc. NC and ne. SC (fall-line sandhills). [= RAB, C, F, FNA, G, K, Z]

* *Potamogeton crispus* Linnaeus, Curled Pondweed, Curly Pondweed. Cp, Pd (GA, NC, VA), Mt (NC, VA): uncommon. May-September. ME, MN, s. Saskatchewan and s. British Columbia, south to NC, Panhandle FL, TX, AZ, and CA. [= RAB, C, F, FNA, G, GW, K, W, WV, Z]

Potamogeton diversifolius Rafinesque, Common Snailseed Pondweed. Cp, Pd, Mt (GA, NC, SC, VA): pools, ponds, and lakes; common. June-September. MA and NY west to MN, MT, and OR, south to FL, TX, and CA. [= RAB, FNA, G, K, S, W, WV, Z; = *P. diversifolius* var. *diversifolius* – C, GW; > *P. diversifolius* – F; > *P. capillaceus* Poiret var. *capillaceus* – F; > *P. capillaceus* Poiret var. *atripes* Fernald – F]

Potamogeton epihydrus Rafinesque, Ribbonleaf Pondweed. Mt, Pd (NC, VA), Cp (NC, SC, VA): uncommon. June-September. Newfoundland west to AK, south to GA, s. MS (Sorrie & Leonard 1999), LA, CO, and CA. [= RAB, C, FNA, K, S, W, WV; > *P. epihydrus* var. *epihydrus* – F, G; > *P. epihydrus* var. *nuttallii* (Chamisso & Schlechtendahl) Fernald – F, G; < *P. epihydrus* – Z (also see *P. tennesseensis*)]

Potamogeton foliosus Rafinesque var. *foliosus*, Leafy Pondweed. Mt (GA, NC, VA), Pd (SC, VA), Cp (NC, SC, VA): uncommon. May-October. Newfoundland west to AK, south to SC, w. FL, TX, and Mexico. [= C; < *P. foliosus* – RAB, G, GW, S, W, Z; > *P. foliosus* var. *foliosus* – F, WV; > *P. foliosus* var. *macellus* Fernald – F, WV; = *P. foliosus* ssp. *foliosus* – FNA, K; > *P. curtissii* Morong – S; > *P. foliosus* – S]

Potamogeton gramineus Linnaeus, Variable Pondweed. Cp (VA): estuarine waters; rare. Greenland and AK, south to sc. PA (Rhoads & Klein 1993), NJ, WV (Kartesz 1999), n. VA, MI, WI, CO, UT, and CA. Reported for VA (Fairfax County); specimen identification needing confirmation. [= C, FNA, G, K, WV, Z; > *P. gramineus* var. *maximus* Morong – F]

Potamogeton hillii Morong, Hill's Pondweed. Mt (VA): spring-fed oxbow pond, rare (VA Rare). VT, MA, Ontario, and WI south to PA, VA, and OH. [= C, FNA, G, K, Z; > *P. hillii* – F; > *P. porteri* Fernald – F]

Potamogeton illinoensis Morong, Illinois Pondweed. Cp (GA, NC, SC, VA), Mt (GA, VA), Pd (VA): calcareous waters of streams, lakes, and ponds; rare. May-September. Québec west to Northwest Territories and s. British Columbia, south to FL, TX, Mexico, and CA. [= RAB, C, F, FNA, G, GW, K, W, WV, Z; > *P. angustifolius* Berchtold & K. Presl – S; > *P. heterophyllus* Schreber – S; > *P. lucens* Linnaeus – S, misapplied]

Potamogeton natans Linnaeus, Floating Pondweed. Mt (NC): lakes and slow streams; rare. June-September. Newfoundland west to AK, south to e. WV, w. NC, KS, NM, AZ, and CA. [= RAB, C, F, FNA, G, K, S, W; < *P. natans* – Z (also see *P. floridanus*)]

Potamogeton nodosus Poiret, Longleaf Pondweed, American Pondweed. Cp (GA, NC, VA), Mt (NC, VA), Pd (VA), {SC}: ponds, streams; uncommon. May-September. ME and Québec west to British Columbia, south to FL, TX, Mexico, and CA. [= RAB, C, F, FNA, G, GW, K, W, WV, Z; ? *P. fluitans* Roth – S; *P. oblongifolium* Forster, proposed for nomenclatural rejection (Reveal et al. 2003)]

Potamogeton oakesianus J.W. Robbins, Oakes Pondweed. Cp, Mt (VA): lakes and streams; rare (VA Rare). Newfoundland west to MN, south to VA and n. IL; apparently disjunct in MT, and British Columbia, and possibly in s. AL (Sorrie, pers. comm.). [= C, F, FNA, G, K, W, Z]

Potamogeton perfoliatus Linnaeus, Perfoliate Pondweed, Redhead Grass. Cp (NC, VA): rare (VA Watch List). June-October. Newfoundland, Labrador west to MI, south to ne. NC, and n. OH; apparently disjunct in w. FL, s. AL, and se. LA, and in SD. [= FNA, G, K, S, Z; > *P. perfoliatus* var. *bupleuroides* (Fernald) Farwell – RAB, F, GW; *P. bupleuroides* Fernald]

Potamogeton pulcher Tuckerman, Spotted Pondweed. Cp, Pd, Mt (GA, NC, SC, VA): ponds, pools, ditches, streams; common. June-September. Nova Scotia west to WI, south to FL and e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, WV, Z; = *P. rotundifolium* Forster, proposed for nomenclatural rejection (Reveal et al. 2003)]

Potamogeton pusillus Linnaeus var. *pusillus*. Cp (GA, NC, SC, VA), Pd, Mt (NC, SC, VA): acid and alkaline waters; uncommon? May-September. Nova Scotia west to AK, south to Mexico. [*< P. berchtoldii* Fieber – RAB; *> P. pusillus* var. *pusillus* – F; *> P. pusillus* var. *minor* (Bivona-Bernardi) Fernald & Schubert – F; = *P. pusillus* ssp. *pusillus* – FNA, K; *< P. pusillus* var. *pusillus* – C; *< P. pusillus* – G, GW, S, Z; = *P. pusillus* – WV]

Potamogeton pusillus Linnaeus var. *tenuissimus* F.K. Mertens & W.D.J. Koch, Slender Pondweed. Cp, Pd, Mt (NC, SC, VA), {GA}: millponds, other quiet waters; rare? (GA Special Concern). May-September. Newfoundland west to AK, south to w. FL, TX, NM, and CA. Reported from SC by Gaddy & Rayner (1980). [= W; *< P. berchtoldii* Fieber – RAB; *< P. pusillus* var. *pusillus* – C; *> P. berchtoldii* var. *acuminatus* Fieber – F; *> P. berchtoldii* var. *berchtoldii* – F; *> P. berchtoldii* var. *lacunatus* (Hagström) Fernald – F; *> P. berchtoldii* var. *acuminatus* Fieber – F; *> P. berchtoldii* var. *polyphyllus* (Morong) Fernald – F; *> P. berchtoldii* var. *tenuissimus* (Mertens & Koch) Fernald – F; *< P. pusillus* – G, GW, S, Z; = *P. pusillus* ssp. *tenuissimus* (Mertens & Koch) R.R. Haynes & C.B. Hellquist – FNA, K; = *P. berchtoldii* – WV]

Potamogeton robbinsii Oakes, Fern Pondweed. Pd (VA): muddy waters; rare (VA Rare). August-September. Nova Scotia and Prince Edward Island west to Keewatin and AK, south to n. VA, n. IL, s. MN, CO, UT, and CA; disjunct in s. AL. [= C, F, FNA, G, K, Z]

Potamogeton spirillus Tuckerman, Northern Snailseed Pondweed. Cp (VA): quiet waters; rare (VA Rare). July-November. Newfoundland west to Manitoba, south to e. VA, n. OH, n. IA, and se. NE. [= C, F, FNA, G, K, WV, Z]

Potamogeton strictifolius A. Bennett, Straightleaf Pondweed. Mt (VA): calcareous waters; rare (VA Rare). July-September. Newfoundland west to Yukon, south to w. VA, n. IL, WY, and n. UT. [= C, FNA, G, K, W, Z; *> P. strictifolius* var. *strictifolius* – F; *> P. strictifolius* var. *rutiloides* Fernald – F; *> P. longiligulatus* Fernald – F]

Potamogeton tennesseensis Fernald, Tennessee Pondweed. Mt (VA), {NC?}: quiet or flowing water; rare (VA Rare). Late May-September. PA and OH south to w. VA, and se. TN. [= F, FNA, K, W, WV; *< P. epiphydrus* – Z, in part]

Potamogeton zosteriformis Fernald, Flatstem Pondweed. Cp, Mt (VA): quiet waters; rare (VA Rare). July-September. Newfoundland west to AK, south to n. VA, n. IL, KS, UT, and CA. [= C, F, FNA, G, K, WV, Z]

Potamogeton alpinus Balbis, Red Pondweed, south to e. PA (Rhoads & Klein 1993). [= FNA, G, K, Z; *> P. alpinus* var. *tenuifolius* (Rafinesque) Ogden – C, F; *> P. tenuifolius* Rafinesque]

Potamogeton floridanus Small, Florida Pondweed, is apparently endemic to blackwater rivers of the Panhandle of FL. Considering the under-collection of *Potamogeton*, it should be sought elsewhere. [= FNA, S; *< P. natans* – Z]

Potamogeton friesii Ruprecht, Fries's Pondweed, south to c. PA (Rhoads & Klein 1993). (VA Watch List) [= C, F, FNA, G, K, Z]

Potamogeton obtusifolius Mertens & Koch, south to MD, NJ, and PA. [= C, F, FNA, G, K] {not yet keyed; synonymy incomplete}

Potamogeton praelongus Wulfen, Whitestem Pondweed, south to MD and nw. PA (Rhoads & Klein 1993). [= C, F, FNA, G, K, Z]

Potamogeton richardsonii (Bennett) Rydberg, Richardson Pondweed, south to DE, MD, and PA. [= C, F, FNA, G, K, Z]

Potamogeton vaseyi J.W. Robbins, Vasey Pondweed, south to se. and sc. PA (Rhoads & Klein 1993). [= C, F, FNA, G, K, Z]

Stuckenia C. Börner 1912 (Sago-pondweed)

A genus of about 10 species, nearly cosmopolitan. This genus should be called *Stuckenia*, which has priority over *Coleogeton*. Lindqvist et al. (2006) provide molecular support for recognition of *Stuckenia* as a genus. References: Haynes & Hellquist in FNA (2000); Les & Haynes (1996)=Z; Haynes, Les, & Král (1998)=Y; Wiegleb & Kaplan (1998)=X; Lindqvist et al. (2006).

1 Leaves minutely acute (use 10× magnification); achenes usually 3-4.5 mm long, with the style persistent as a very short beak*S. pectinata*

1 Leaves minutely rounded or retuse (use 10× magnification); achenes usually 2-3 mm long, with the sessile stigma persistent as a bump.....
.....[*S. filiformis* ssp. *alpina*]

Stuckenia pectinata (Linnaeus) C. Börner, Sago-pondweed. Cp (NC, SC, VA), Mt, Pd (VA), {GA}: calcareous or brackish waters of ponds, lakes, estuaries, sounds; uncommon. June-September. The species is irregularly cosmopolitan. [= FNA, K, Y; = *Potamogeton pectinatus* Linnaeus – RAB, C, F, G, GW, S, W, WV, X; = *Coleogeton pectinatus* (Linnaeus) D.H. Les & R.R. Haynes – Z]

Stuckenia filiformis (Persoon) C. Börner ssp. *alpina* (Blytt) R.R. Haynes, D.H. Les, & M. Král, Threadleaf Pondweed, approaches our area in se. and sc. PA. [= FNA, K, Y; = *Potamogeton filiformis* Persoon var. *alpinus* (Blytt) Ascherson & Graebner; *> Potamogeton filiformis* Persoon var. *borealis* (Rafinesque) H. St. John – C, F, G; *< Potamogeton filiformis* – X; = *Coleogeton filiformis* (Persoon) D.H. Les & R.R. Haynes ssp. *alpinus* (Blytt) D.H. Les & R.R. Haynes – Z]

Zannichellia Linnaeus 1753 (Horned Pondweed)

A genus of about 5 species, aquatic herbs, nearly cosmopolitan. References: Haynes & Hellquist in FNA (2000); Haynes & Holm-Nielsen (1987)=Z.

Identification notes: *Zannichellia* is sometimes confused with other aquatics, such as *Ruppia* and narrow-leaved *Potamogeton*. *Potamogeton* has at least some leaves alternate; *Zannichellia* and *Ruppia* are opposite-leaved. *Zannichellia* lacks the abruptly broadened sheath of *Najas*. Also, the seeds are flattened in *Zannichellia*, and toothed down one side; *Najas* has a cylindrical or elliptic fruit. *Zannichellia* has longer leaves (3-10 cm long) than *Najas* (< 4 cm long).

Zannichellia palustris Linnaeus, Horned Pondweed. Cp (NC, VA), Mt (VA), {GA}: fresh or brackish water; common. February-October. The species occurs throughout much of the world. [= RAB, C, FNA, G, GW, K, S, W, WV, Z; > *Z. palustris* var. *major* (Hartman) W.D.J. Koch – F; > *Z. palustris* var. *palustris* – F]

RUPPIACEAE Horaninow ex Hutchinson 1934 (Wigeon-grass Family)

A family of a single genus and 1-10 species. References: Haynes (1978)=Z; Haynes in FNA (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Ruppia Linnaeus (Wigeon-grass)

A genus of 1-10 species, nearly cosmopolitan. References: Haynes (1978)=Z; Haynes in FNA (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Identification notes: Separable from superficially similar species of *Potamogeton* by the stipules adnate their entire length (vs. separate at least at the tip in *Potamogeton*).

Ruppia maritima Linnaeus, Wigeon-grass, Ditch-grass. Cp (GA, NC, SC, VA): brackish estuaries, rivers, marsh pools; common. July-October. Nearly cosmopolitan. [= RAB, C, FNA, GW, K, S, Z; > *R. maritima* var. *maritima* – F, G; > *R. maritima* var. *longipes* Hagström – F; > *R. maritima* var. *rostrata* Agardh – F, G]

RUSCACEAE M. Roemer 1840 (Ruscus Family)

As here circumscribed, a family of about 28 genera and 500 species, of North America, Central America, Europe, and Asia. The Convallariaceae has been supported by molecular studies (Judd 2003, Bogler & Simpson 1995). Molecular studies show that *Nolina* is much more closely related to *Convallaria*, *Polygonatum*, etc. than to the Agavaceae (*Yucca* and *Manfreda* in our flora), with which it has often been associated. References: Bogler & Simpson (1995); Bogler in Kubitzki (1998a); Yeo in Kubitzki (1998a); Conran & Tamura in Kubitzki (1998a); Yamashita & Tamura (2000).

- 1 Plant with an upright stem with alternate leaves.
 - 2 Shrub; "leaves" (actually phylloclades) coriaceous, evergreen, glossy; [exotic, rarely naturalized]; [tribe *Rusceae*] *Danae*
 - 2 Herb; leaves herbaceous, deciduous, dull or slightly glossy; [native]; [tribe *Polygonatae*].
 - 3 Inflorescence terminal, a raceme or panicle; tepals separate..... *Maianthemum*
 - 3 Inflorescence of 1-several axillary flowers; tepals fused *Polygonatum*
- 1 Plant tufted, the leaves essentially basal (although the sheathing bases form a 'false' stem in *Convallaria*).
 - 4 Leaves 2-3, narrowly elliptic; tepals fused, white or greenish; [tribe *Convallarieae*] *Convallaria*
 - 4 Leaves many, linear; tepals separate (or fused basally), white or violet.
 - 5 Fruit dehiscent, quickly exposing berry-like seeds with a fleshy seed coat; inflorescence spikelike, to 3 dm tall; [aliens, scarcely naturalized from horticultural plantings]; [tribe *Ophiopogoneae*] *Liriope*
 - 5 Fruit indehiscent, dry and capsular; inflorescence a panicle or raceme, to 15 dm tall; [natives, of longleaf pine woodlands of SC, GA, and FL]; [tribe *Nolineae*]..... *Nolina*

Convallaria Linnaeus 1753 (Lily-of-the-Valley)

A genus of 3 species, of north temperate n. Eurasia and e. North America. References: Utech in FNA (2002a); Judd (2003)=Z; Conran & Tamura in Kubitzki (1998a).

- 1 Leaf blades averaging 10-15 cm long, 3-5 cm wide; rhizomes short-creeping, the "individual" plants spaced closely (typically 5-10 cm apart); flowering scape > ½ as long as the leaves; longer bracts of the inflorescence 4-10 mm long; [introduced, persistent around old home sites and other plantings]..... *C. majalis*
- 1 Leaf blades averaging 15-35 cm long, 5-13 cm wide; rhizomes absent or long-creeping, the individual plants spaced widely (usually at least 15 cm apart); flowering scape < ½ as long as the leaves; longer bracts of the inflorescence 8-20 mm long; [native, of forests of the Mountains and upper Piedmont] *C. majuscula*

* *Convallaria majalis* Linnaeus, European Lily-of-the-Valley. Pd, Cp, Mt (NC, VA): persistent after cultivation; rare, native of Eurasia. April-May; July-August. [= F, K, W; = *C. majalis* var. *majalis* – RAB, FNA; < *C. majalis* – C, G, S, Z (also see *C. majuscula*)]

Convallaria majuscula Greene, American Lily-of-the-Valley. Mt (GA, NC, SC, VA), Pd (NC, VA): mountain forests, particularly in rocky woodlands or forests on or near ridgetops under northern red oak at about 1000 to 1500 m elevation, sometimes at lower elevations (down to at least 700 m) and under *Quercus montana*; uncommon, rare in Piedmont (SC Rare). April-June; August. Endemic to the Southern Appalachians: WV and VA through NC and TN to ne. GA (Jones & Coile 1988) and nw. SC. Cronquist's (1991) statement that Southern Appalachian plants "may reflect an early escape of a different phase of the species from cultivation" can be discounted; there is no doubt that *C. majuscula* is both native and taxonomically distinct, at a

varietal level at least. Utech in FNA (2002a) states that our plants are more closely related to the Asian taxon, variously treated as *C. keiskei* Miquel or *C. majalis* var. *keiskei* (Miquel) Makino, than to the European *C. majalis* s.s. As best as can be determined, Rafinesque's name *Convallaria montana* does not apply to this species. [= K; = *C. majalis* Linnaeus var. *montana* (Rafinesque) Ahles – RAB, FNA, apparently misapplied; < *C. majalis* – C, G, S, Z; = *C. montana* Rafinesque – F, W, apparently misapplied]

***Danae* Medikus (Alexandrian Laurel, Danaë)**

A monotypic genus, a shrub, of sw. Asia.

* ***Danae racemosa*** (Linnaeus) Moench, Alexandrian Laurel. Pd (NC): suburban forests; rare, uncommon in cultivation, rarely escaping to suburban forests, native of sw. Asia. The "leaves" are actually odd structures called phylloclades, and represent modified stems.

***Liriope* Loureiro 1790 (Liriope, Lilyturf)**

A genus of 8 species, herbs, of e. and se. Asia. References: Conran & Tamura in Kubitzki (1998a); Judd (2003)=Z.

* ***Liriope muscari*** (Dcne.) Bailey, Liriope, Big Blue Lilyturf. Pd, Mt (NC), {SC}: planted and persistent; commonly cultivated, rarely persistent. [= K, Z] {not yet keyed}

* ***Liriope spicatum*** Loureiro, Creeping Lilyturf. Reported for AL, FL, MD (Kartesz 1999). [= K; *L. spicata* Loureiro – Z, orthographic variant] {not yet keyed}

***Maianthemum* G.H. Weber ex Wiggers 1780 (Mayflower, Solomon's-plume)**

A genus of about 28 species, herbs, of n. Europe, e. Asia, North America, and Central America. The inclusion of the traditional *Smilacina* in *Maianthemum* will cause considerable consternation; LaFrankie's (1986) reasoning, however, seems very strong, and has been additionally supported by more recent evidence (Conran & Tamura in Kubitzki 1998a). The only consistent difference between the two previously accepted genera is whether the flowers are dimerous (*Maianthemum*) or trimerous (*Smilacina*). LaFrankie cites research that shows that the dimerous flowers of *Maianthemum* (*sensu stricto*) are the result of reduction from trimerous flowers, as indicated by vestigial vascular traces. Consideration of the many close similarities, particularly as compared to similar genera such as *Prosartes*, *Polygonatum*, *Streptopus*, and *Clintonia*, may convince the skeptical (see LaFrankie 1986 and Therman 1956). As an example, the fruits of *M. canadense* and *M. racemosum* are closely similar in form, coloration, and size; much more similar than the fruits of our 2 species of *Prosartes*. References: LaFrankie (1986)=Z; Judd (2003)=Y; LaFrankie in FNA (2002a); Conran & Tamura in Kubitzki (1998a).

- | | | |
|---|--|--|
| 1 | Flowers in a terminal panicle | <i>M. racemosum</i> ssp. <i>racemosum</i> |
| 1 | Flowers in a simple raceme | |
| 2 | Perianth segments 4 (flowers 2-merous); leaves (1-) 2 (-3) | <i>M. canadense</i> |
| 2 | Perianth segments 6 (flowers 3-merous); leaves 6 or more | <i>M. stellatum</i> |

Maianthemum canadense Desfontaines, Canada Mayflower, False Lily-of-the-valley. Mt (GA, NC, VA), Pd (VA): moist forests, especially at high elevations; common. Mid May-early July; August-September. Labrador and Newfoundland west to Mackenzie, south to MD, NC, n. GA (Jones & Coile 1988), KY and SD. Two varieties have been described, but their recognition is not strongly supported. Var. *canadense*, with leaves glabrous beneath, the margins entire or minutely crenulate, cross-veins of the leaf well-developed, is widespread in the distribution of the species. Var. *interius* Fernald has the leaves pubescent beneath, the leaf margins distinctly ciliate, and cross-veins obscure; it is not known from our area, but extends east and south as far as MA, NY, and OH. Further study of these varieties is needed. Weller (1970) reports equivocal results on the recognition of varieties, based on a study in n. MI. [= RAB, FNA, K, W, Y, Z; > *Maianthemum canadense* Desfontaines var. *canadense* – C, F, G; = *Unifolium canadense* (Desfontaines) Greene – S]

Maianthemum racemosum (Linnaeus) Link ssp. ***racemosum***, Eastern Solomon's-plume, False Solomon's-seal. Mt, Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): forests; common (rare in FL). Mid April-June; August-October. The species ranges from Nova Scotia west to British Columbia, south to GA, FL Panhandle, and AZ. A variety of chromosome races are known (2n = 36, 72, 144). The eastern ssp. *racemosum* is tetraploid; ssp. *amplexicaule* (Nuttall) LaFrankie is diploid and more western; these are perhaps more appropriately treated as species. Under the generic name *Smilacina*, two varieties had been described for our area, *Smilacina racemosa* var. *racemosa* and *S. racemosa* var. *cylindrata* Fernald, the former larger in nearly all respects and more northern than the latter, smaller, and more southern form (see F for details). If these varieties are determined to have merit (further research is needed), the appropriate transfer to *Maianthemum* will need to be made. [= FNA, K, Y, Z; < *Smilacina racemosa* (Linnaeus) Desfontaines – RAB, C, G, W; > *S. racemosa* var. *racemosa* – F; > *S. racemosa* var. *cylindrata* Fernald – F; > *Vagnera racemosa* (Linnaeus) Morong – S; > *Vagnera australis* Rydberg – S; < *M. racemosum* – WH]

Maianthemum stellatum (Linnaeus) Link, Starry Solomon's-plume. Mt, Pd (VA): alluvial forests; rare (VA Rare). April-June; August-October. Newfoundland west to British Columbia, south to NJ, w. VA, e. TN, IN, MO, and CA. [= FNA, K, Y, Z; = *Smilacina stellata* (Linnaeus) Desfontaines – C, F, G, W]

Nolina Michaux 1803 (Beargrass)

A genus of about 30 species, rosette shrubs and trees, of s. United States and Mexico. References: Hess in FNA (2002a); Judd (2003)=Z; Bogler in Kubitzki (1998a).

- 1 Leaves 3-4 (-5) mm wide; fruit 4-4.5 mm long, strongly asymmetrical; [of moist flatwoods of the FL Coastal Plain].....*N. atopocarpa*
 1 Leaves 4-10 mm wide, glaucous; fruit 6.5-8 mm long, symmetrical; [of dry to dry-mesic sandhills of the GA and SC Coastal Plain]
 *N. georgiana*

Nolina atopocarpa Bartlett, Florida Beargrass. Cp (FL): pine flatwoods and savannas; rare. Endemic to panhandle FL (Liberty and Franklin counties) and e. peninsular FL (St. Johns and Brevard counties). [= FNA, K, S, WH, Z]

Nolina georgiana Michaux, Georgia Beargrass, Sandhills Lily. Cp (GA, SC): sandhills, sometimes locally common on slightly less xeric lower sandhill slopes; rare (SC Rare). Late May-June; late June-August. Nc. SC south to sc. GA. This species has been attributed to FL (Small 1933), but is not included in either Clewell (1985) or Wunderlin (1982, 1998). [= RAB, FNA, K, S, Z]

Polygonatum P. Miller 1754 (Solomon's-seal)

A genus of about 57 species, of temperate Eurasia and North America (most diverse in e. Asia). The *P. biflorum* complex is in need of further study. References: Ownbey (1944)=Z; Judd (2003)=Y; Utech in FNA (2002a); Eigsti (1942); Therman (1950, 1953); Kawano & Iltis (1963); Conran & Tamura in Kubitzki (1998a).

- 1 Leaves pubescent on the veins beneath; flowers 7-13 mm long*P. pubescens*
 1 Leaves glabrous; flowers 12-21 mm long.
 2 Stem slender, 1.5-5 mm in diameter; plants to 9 dm tall; lower axillary peduncles terete or nearly so, with (1-) 2-3 (-5) flowers; lowest peduncle in the axil of the (1st-) 3rd (-5th) axil; larger leaves 5.5-15 cm long, 1.2-6 cm wide; lower leaves clasping to 90 (-180) degrees
 *P. biflorum* var. *biflorum*
 2 Stem robust, 5-13 mm thick below the leaves; plants to 20 dm tall; lower axillary peduncles strongly flattened, with (2-) 3-6 (-15) flowers; lowest peduncle in the axil of the (3rd-) 4th-5th (-8th) leaf; larger leaves 9-25 cm long, 3.5-13 cm wide; lower leaves clasping to 300 degrees*P. biflorum* var. *commutatum*

Polygonatum biflorum (Walter) Elliott var. *biflorum*, Small Solomon's-seal. Mt, Pd, Cp (GA, NC, SC, VA): moist to dry forests; common. April-June; August-October. CT, NY, and s. Ontario west to MI, NE, and IN, south to n. FL and s. AL. In addition to the two varieties recognized for our area, *P. biflorum* includes several additional varieties: var. *hebetifolium* R.R. Gates of panhandle FL (Apalachicola River area), var. *melleum* (Farwell) R. Ownbey of MI and Ontario, and var. *necopinum* R. Ownbey from the Black Hills of SD. The complex needs additional study. See var. *commutatum* for discussion of its distinction from var. *biflorum*. [= Z; < *P. biflorum* – RAB, C, FNA, W, Y; = *P. biflorum* – F, G, in the narrow sense; < *P. biflorum* var. *commutatum* (J.A. & J.H. Schultes) Morong – K; < *P. commutatum* (J.A. & J.H. Schultes) A. Dietrich – S]

Polygonatum biflorum (Walter) Elliott var. *commutatum* (J.A. & J.H. Schultes) Morong, Large Solomon's-seal, King Solomon's-seal. Mt (GA, NC, SC?, VA), Pd (NC, VA): moist forests, roadbanks; common. May-June; September-October. NH west to s. Manitoba, south to SC, GA, LA, and TX. There has been a wide divergence of opinion regarding the merits (and practicality) of distinguishing this taxon from typical *P. biflorum*, and the characters considered most reliable; the two taxa may differ in chromosome number and geographical distribution; they are not, however, always readily distinguished morphologically. I prefer to recognize this taxon as a variety. See references for additional discussion. [< *P. biflorum* – RAB, C, FNA, W, Y; = *P. canaliculatum* (Muhlenberg ex Willdenow) Pursh – F, G, misapplied; < *P. biflorum* var. *commutatum* (J.A. & J.H. Schultes) Morong – K; < *P. commutatum* (J.A. & J.H. Schultes) A. Dietrich – S; = *P. commutatum* – Z]

Polygonatum pubescens (Willdenow) Pursh. Mt (GA, NC, SC?, VA): moist forests, especially cove forests; common. Late April-June; August-October. S. Québec west to s. Manitoba, south to nw. SC, WV, KY, IN, WI, and IA. [= RAB, C, F, FNA, G, K, W, Y, Z; = *P. biflorum* – S, misapplied]

SCHEUCHZERIACEAE F. Rudolphi 1830 (Scheuchzeria Family)

A monotypic family, circumboreal in arctic and cold temperate regions. References: Nienaber in FNA (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Scheuchzeria Linnaeus (Scheuchzeria, Pod-grass)

A monotypic genus, circumboreal in arctic and cold temperate regions. References: Nienaber in FNA (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Scheuchzeria palustris Linnaeus var. *americana* Fernald, Pod-grass. Mt (VA): *Sphagnum* bogs; rare. Labrador and AK south to s. NJ, e. WV (Cranberry Glades, Pocahontas County), sc. PA (Rhoads & Klein 1993), IN, IL, IA, WY, and CA. [= F; < *Sch. palustris* – C, FNA, G, WV; = *Sch. palustris* ssp. *americana* (Fernald) Hultén – K; = *Sch. americana* (Fernald) G.N. Jones]

SMILACACEAE Ventenat 1799 (Greenbrier Family)

A family of 3-12 genera and about 375 species, widespread in tropical, subtropical, and temperate regions. References: Holmes in FNA (2002a); Judd (1998); Conran in Kubitzki (1998a).

Smilax Linnaeus 1753 (Greenbrier, Carrionflower, Smilax)

A genus of about 300 species, woody vines and herbs, subcosmopolitan in temperate and tropical regions. Our deciduous species are a monophyletic group within *Smilax*, with a classic eastern North American - east Asian disjunction, and are treated as section *Nemexia* or subgenus *Luiste* (Wilbur 2004, Fu et al. 2005). *Smilax* berries and shoots provide important food sources for many wildlife species, including black bears (*Ursus americanus*). References: Mangaly (1968)=Z; Judd (1998)=Y; Holmes in FNA (2002a); Wilbur (2004); Fu et al. (2005); Duncan (1967); Godfrey (1988). Key for the woody species based in part on Godfrey (1988).

- 1 Stem herbaceous, lacking prickles; ovules 2 per carpel; peduncles usually > 4 cm long; [section *Nemexia*].
 - 2 Plants erect, 0.2-1.0 m tall, even when well-developed with < 20 leaves [note that immature or depauperate individuals (nonflowering) of *S. pseudochina*, *S. herbacea*, *S. lasioneura*, and *S. pulverulenta* often have this aspect]; tendrils absent or rudimentary; peduncles usually few (usually 1-4), the lowest often from bract axils.
 - 3 Leaves glabrous and glaucous beneath, thick in texture, base cordate, tip acute or acuminate; lowest peduncle from a leaf axil (very rarely from bract axils), upper peduncles from leaf axils; leaves 5-7, clustered together near the summit of the stem *S. biltmoreana*
 - 3 Leaves pubescent and green (or glaucous) beneath, usually thin in texture, base cordate, truncate, or rounded, tip acuminate, acute, or obtuse; lowest peduncles from axils of bracts below the lowest leaves, upper peduncles also often from bracts (the uppermost often from leaf axils); leaves either clustered together near the summit of the stem or well distributed.
 - 4 Leaves relatively many, (7-) 10-13 (-20), often well distributed in the upper half of the stem, notably reduced in size from lower to upper, mostly with the base cordate and the tip acuminate; berry 3-5 seeded *S. ecirrata*
 - 4 Leaves few, usually 4-8, usually clustered together near the summit of the stem (rarely well distributed), about the same size, mostly with the base ovate (to subcordate), the tip acute to obtuse; berry 2-3 seeded *S. hugeri*
 - 2 Plants vine-like, climbing or sprawling, to 3 m tall, when well-developed with > 30 leaves; tendrils present and numerous; peduncles usually many, from leaf axils.
 - 5 Leaf bases hastate, the leaf margins straight or concave in outline; longest fruiting pedicels < 2× as long as the fruit; anthers equaling or longer than the filaments; perianth 1.5-2.5 mm long; leaves glabrous and glaucous beneath *S. pseudochina*
 - 5 Leaf bases cordate, the leaf margins convex in outline; longest fruiting pedicels 2× or more as long as the fruit; anthers shorter than the filaments; perianth 3.5-6 mm long; leaves either puberulent beneath (at least along the veins), or glabrous and glaucous beneath.
 - 6 Leaves glabrous and glaucous on the lower surface; fruit dark blue and glaucous; peduncles 5-8× as long as the subtending petioles... *S. herbacea*
 - 6 Leaves puberulent on the lower surface, at least on the veins; fruit dark blue and glaucous or black and not glaucous; peduncles 1-10× as long as the subtending petioles.
 - 7 Leaves bright green and shiny beneath; fruit black, not glaucous; peduncles 1-2 (-3)× as long as the subtending petioles *S. pulverulenta*
 - 7 Leaves pale green and dull below; fruit dark blue, glaucous; peduncles (3-) 5-10× as long as the subtending petioles *S. lasioneura*
- 1 Stem woody, usually with prickles; ovules 1 per carpel; peduncles usually < 3 cm long; [section *China*].
 - 8 Stems and petioles tomentose, lacking prickles; leaves densely tomentose beneath; berries red; plant trailing or ascending, rarely > 0.5 m tall (with determinate growth) *S. pumila*
 - 8 Stems and petioles stellate-scurfy or glabrous, generally with prickles; leaves glabrous or papillate beneath; berries red, black, or dark blue; plant climbing, ascending, or trailing, mature plants generally well over 0.5 m tall (with indeterminate growth).
 - 9 Lower surfaces of leaves strongly glaucous *S. glauca*
 - 9 Lower surfaces of leaves green (rarely very slightly glaucous).
 - 10 Prickles of the stem abundant, thin and needle-like, shiny brown or black *S. hispida*
 - 10 Prickles of the stem fewer, broad-based and awl-like or catclaw-like, green, brown, or black.
 - 11 Midvein (as seen on the lower surface) much more pronounced than the principal lateral veins, which are scarcely raised; leaves evergreen, thick, coriaceous *S. laurifolia*
 - 11 Midvein (as seen on the lower surface) little if any more pronounced than the principal lateral veins; leaves evergreen or deciduous, thin, subcoriaceous.
 - 12 Leaves mostly lanceolate, the base cuneate, the tip acute to acuminate; berries dull red *S. smallii*
 - 12 Leaves mostly ovate, oblong, pandurate, or hastate, the base cordate, truncate, rounded, or cuneate, the tip rounded to acute; berries various in color.
 - 13 Margin of the leaf blade prominently thickened with a marginal vein (this appearing as a thickening, a visible vein, or an apparent revolute margin); berries with 1-3 seeds.
 - 14 Inflorescence peduncle (stalk of the umbel) as long as or shorter than the subtending leaf petiole; stems and prickles glabrous; leaves evergreen; berries usually with 2-3 seeds; [generally of xeric or less commonly mesic sands] *S. auriculata*
 - 14 Inflorescence peduncle (stalk of the umbel) > 1.5× as long as the subtending leaf petiole; stems (especially the lower) and prickles brownish stellate-scurfy; leaves semi-evergreen to evergreen; berries usually with 1 seed; [of a wide variety of habitats] *S. bona-nox*

- 13 Margin of the leaf blade thin, sometimes revolute; berries with (1-) 2-4 seeds.
- 15 Berries blue-black; perianth green; leaves semi-evergreen to evergreen, margins of mature leaves generally not revolute, the margins of the leaves and the petioles often with minute, flattish, toothlike projections; berries with (1-) 2-3 seeds; [of a wide variety of upland and wetland habitats]..... *S. rotundifolia*
- 15 Berries bright red; perianth brownish-yellow; leaves deciduous, margins of mature leaves usually revolute, the margins of the leaves and the petioles lacking minute, flattish, toothlike projections; berries with 2-4 seeds; [of swamp forests, bogs, often where submersed for at least part of the year]..... *S. walteri*

Smilax auriculata Walter, Dune Greenbrier. Cp (GA, NC, SC): dunes on barrier islands, dry sandy openings in maritime forests or sandhills near the coast; common. May-July; October-November (and persisting). E. NC (Dare County) south to s. FL and west to LA; Bahama Islands. [= RAB, FNA, GW, K, S, Y]

Smilax biltmoreana (Small) J.B.S. Norton ex Pennell, Biltmore Carrionflower. Mt, Pd (GA, NC, SC), Cp (GA): dry forests (such as dry pine ridges and chestnut oak forests) and moist forests; rare (NC Rare). April-May; August-October. The species is apparently limited to NC, SC, and GA, primarily in the Blue Ridge Escarpment region, with disjunct occurrences in panhandle FL, s. AL, and sc. KY. [= FNA, K, W, Y, Z; = *Smilax ecirrata* (Engelmann ex Kunth) S. Watson var. *biltmoreana* (Small) Ahles – RAB; < *S. ecirrhata* – G, in part (concept interpreted from stated geographic range); = *Nemexia biltmoreana* Small – S]

Smilax bona-nox Linnaeus, Catbrier, Tramp's-trouble. Cp, Pd, Mt (GA, NC, SC, VA): in a wide variety of upland and wetland habitats; common. Late April-May; September-November. MD and MO south to c. FL and TX, and also in Mexico. [= RAB, C, FNA, G, GW, K, S, W, Y; > *S. bona-nox* var. *hastata* (Willdenow) Alphonse de Candolle – F; > *S. bona-nox* var. *exauriculata* Fernald – F; > *S. bona-nox* var. *hederifolia* (Beyrich) Fernald – F; > *S. bona-nox* var. *bona-nox* – F]

Smilax ecirrata (Engelmann ex Kunth) S. Watson. Mt (VA): forests; rare (VA Rare). Mid May-early June; August-September. N. OH MI, WI, and s. MN south to w. VA, TN, s. IL, MO, and e. OK. [= K, Y, Z; = *S. ecirrhata* – C, F, FNA, orthographic variant; < *S. ecirrhata* – G, broader sense (apparently also including in statement of range *S. hugeri* and/or *S. biltmoreana*); = *Nemexia ecirrhata* (Engelmann ex Kunth) Small – S]

Smilax glauca Walter, Whiteleaf Greenbrier, Wild Sarsaparilla. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of upland and wetland habitats; common. Late April-early June; September-November (and persisting). NJ, c. PA, OH, IN, MO, and KA south to c. FL and TX, and also in Mexico. [= RAB, C, FNA, GW, S, W, Y; > *S. glauca* var. *glauca* – F, G, K; > *S. glauca* var. *leuophylla* Blake – F, G, K]

Smilax herbacea Linnaeus, Common Carrionflower. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (GA, VA): moist deciduous forests; common. May-June; August-October. Centered in the Appalachian Mountains, from Québec and ME west to OH, south to AL, GA, and TN. Young, non-flowering plants closely resemble *S. biltmoreana*. [= F, FNA, K, W, Y, Z; = *S. herbacea* var. *herbacea* – RAB, C, G; = *Nemexia herbacea* (Linnaeus) Small – S]

Smilax hispida Rafinesque, Bristly Greenbrier, Hellfetter. Mt, Pd, Cp (GA, NC, SC, VA): moist to wet forests; common. CT, NY, MN, and NE south to c. FL and TX. Wilbur (2003) discusses the complicated nomenclatural problems involving this plant and concludes that *S. hispida* Raf. is the correct name. [= *Smilax tamnoides* Linnaeus – FNA, GW, K, W, Y, misapplied; = *S. hispida* Muhlenberg – RAB, C, G, S; > *S. tamnoides* var. *hispida* (Muhlenberg) Fernald – F; > *S. tamnoides* var. *tamnoides* – F; > *S. hispida* var. *australis* Small – S; > *S. hispida* var. *hispida* – S]

Smilax hugeri (Small) J.B.S. Norton ex Pennell, Huger's Carrionflower. Mt (GA, NC, SC), Pd (GA, NC, SC), Cp (GA, SC): moist deciduous forests; rare (NC Watch List). March-April; August-October. S. NC and e. TN south through SC, GA, and AL to panhandle FL. [= FNA, K, W, Y, Z; = *S. ecirrata* (Engelmann ex Kunth) S. Watson var. *hugeri* (Small) Ahles – RAB; = *Nemexia hugeri* Small – S]

Smilax lasioneura Hooker, Midwestern Carrionflower. Mt (NC, SC, VA?), Pd (NC), {GA}: moist deciduous forests, bluff forests, pine-oak hickory submesic forests, perhaps only or primarily over mafic rocks; rare (GA Rare, NC Rare). April-May; August-September. Ontario and MT south to w. VA (?), w. NC, n. FL, OK, and CO. Material from VA is ambiguous. [= F, FNA, K; = *S. herbacea* var. *lasioneura* (Hooker) Alphonse de Candolle – C, G; = *Nemexia lasioneuron* (Hooker) Rydberg – S; = *S. lasioneuron* – Y, orthographic variant]

Smilax laurifolia Linnaeus, Blaspheme-vine, Bamboo-vine. Cp, Pd, Mt (GA, NC, SC, VA): pocosins, swamp forests, mountain bogs in sw. NC; common (rare in Piedmont and Mountains). July-August; September-October of the second year (and persisting). Primarily a Southeastern Coastal Plain species: NJ south to s. FL, west to w. TN, AR, and e. TX, and also in the Bahama Islands and Cuba. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Smilax pseudochina Linnaeus, Coastal Carrionflower. Cp (GA, NC, SC, VA): pocosins, swamp forests, edges of pine savannas; uncommon. May; August-October. An Atlantic Coastal Plain endemic: NJ, se. PA, and DE south to e. GA. [= C, FNA, K, Y; = *S. tamnifolia* Michaux – RAB, G; = *S. pseudo-china* – F, W, Z, orthographic variant; > *Nemexia tamnifolia* (Michaux) Small – S; > *Nemexia leptanthera* (Pennell) Small – S]

Smilax pulverulenta Michaux. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): moist deciduous forests: common. May-June; August-October. Se. NY, se. and sc. PA, IN, MO, and e. KS south to NC, TN, and AR. [= F, FNA, K, W, Y, Z; = *S. herbacea* var. *pulverulenta* (Michaux) A. Gray – RAB, C, G; = *Nemexia pulverulenta* (Michaux) Small – S]

Smilax pumila Walter, Sarsaparilla-vine, Dwarf Smilax. Cp (GA, SC): mesic to dryish hammocks and bluffs, northward primarily in maritime-influenced mainland forest, with *Magnolia grandiflora* and *Tilia americana* var. *caroliniana*; rare (NC Watch List). October-November; January-April (and persisting). Ne. SC (within a few hundred meters of Brunswick County, NC) to FL and west to TX. It occurs on Colkins Neck, along the NC-SC border, in maritime-influenced forests with southern affinities, now largely destroyed by golf-course development. This unusual *Smilax* is sometimes cultivated as an ornamental ground-cover. [= RAB, FNA, K, S, Y]

Smilax rotundifolia Linnaeus, Common Greenbrier, Bullbrier, Horsebrier. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of upland and wetland habitats; common. April-May; September-November (and persisting). Nova Scotia and s. Ontario

south to n. FL and e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, Y; > *S. rotundifolia* var. *quadrangularis* (Muhlenberg ex Willdenow) Wood]

Smilax smallii Morong, Jackson-brier. Cp (GA, NC, SC, VA), Pd, Mt (GA): bottomland forests; uncommon, rare in VA (VA Rare). June-July; April-June of the next year. Se. VA to c. FL, west to s. AR and e. TX, primarily on the Coastal Plain. [= RAB, FNA, G, GW, K, W, Y; = *S. lanceolata* Linnaeus – S, misapplied]

Smilax walteri Pursh, Coral Greenbrier, Red-berried Swamp Smilax. Cp, Pd (GA, NC, SC, VA): swamp forests, bogs, often where submersed for at least part of the year; common (rare in Piedmont). Late April-May; September-November (and persisting). NJ south to c. FL and west to TN, AR, and TX. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Smilax leptanthera Pennell. See Pennell (1916) for additional information. Treated as valid and rare by GAHP. [= *Nemexia leptanthera* (Pennell) Small – S; < *S. pseudochina*] {investigate}

STEMONACEAE Engler 1887 (Stemona Family)

A family of 3-4 genera and 30-35 species, herbs and shrubs, of Asia, Australia, and se. North America. References: Whetstone in FNA (2002a); Rogers (1982)=Z; Kubitzki in Kubitzki (1998a).

Croomia Torrey 1840 (Croomia)

A genus of 3 species, 2 in China and Japan and 1 in se. North America. Sometimes segregated into the Croomiaceae. References: Whetstone in FNA (2002a); Rogers (1982)=Z; Kubitzki in Kubitzki (1998a).

Croomia pauciflora (Nuttall) Torrey, Croomia. Cp (GA): moist forests, often with beech and basswood; rare (GA Threatened). April-May. AL (or perhaps LA) to sw. GA, Panhandle FL, and allegedly se. GA (Whetstone in FNA 2002, Jones & Coile 1988). [= FNA, K, S, Z]

THEMIDACEAE Salisbury 1866 (Brodiea Family)

A family of 12 genera and about 60 species, herbs, of w. North America south to Guatemala. References: Rahm in Kubitzki (1998a).

Dichelostemma Kunth 1843

A genus of 5 species, of w. United States and Mexico. References: Pires in FNA (2002a); Rahm in Kubitzki (1998a).

* ***Dichelostemma congestum*** (Smith) Kunth, native of the Pacific northwestern North America, is cultivated and apparently escaped in the Piedmont of nc. GA (Jones & Coile 1988). {further investigate} [= FNA, K; = *Brodiaea congesta* Smith]

TOFIELDIACEAE Takhtajan 1994 (False-asphodel Family)

A family of 5 genera and about 30 species, of disjunct distribution in north temperate and subarctic areas, and in the Guayana Shield and northern Andes areas of n. South America. Reveal & Zomlefer (1998) place the Tofieldiaceae in the monotypic order Tofieldiales, only distantly related to the Liliaceae. Tamura in Kubitzki (1998a) treats this group as subfamily Tofieldioideae of the Nartheciaceae. References: Zomlefer (1997c, 1999); Tamura in Kubitzki (1998a).

- 1 Inflorescence 1-flowered; tepals yellow; seeds yellowish; [endemic to Panhandle FL] ***Harperocallis***
- 1 Inflorescence a raceme or thyrse; tepals white to pale cream (fading to yellowish on dried specimens); seeds brown; [collectively widespread].
- 2 Bracts of the inflorescence large, spathe-like, acuminate-aristate at the tip; tepals 9-17 mm long; stamens (6-) 9 (-12)..... ***Pleea***
- 2 Bracts of the inflorescence minute; tepals 2.5-5 mm long; stamens 6.
- 3 Inflorescence a raceme (the flower pedicels attached to the scape singly); scape smooth; flowering (late August-) late September-October ***Tofieldia***
- 3 Inflorescence a thyrse (flower pedicels attached to the scape in groups of 3-7); scape scurfy-scabrous; flowering June-August ... ***Triantha***

Harperocallis McDaniel 1968 (Harper's Beauty)

A monotypic genus, perennial, of southeastern United States. References: McDaniel (1968)=Y; Zomlefer (1997c)=Z; Utech & Anderson in FNA (2002a).

Harperocallis flava McDaniel, Harper's Beauty. Cp (FL): pineland bogs, nearby road margins; rare. Endemic to FL Panhandle (Franklin and Liberty counties). [= FNA, K, Y, WH, Z]

Pleea Michaux 1803 (Rush-featherling)

A monotypic genus, of se. North America, sometimes included in *Tofieldia*. References: Zomlefer (1997c)=Z; Tamura in Kubitzki (1998a); Packer in FNA (2002a).

Pleea tenuifolia Michaux, Rush-featherling. Cp (FL, GA?, NC, SC): locally abundant in wet savannas, pocosin margins, usually in peaty soil, locally abundant in a few counties in se. NC, rare inland (very rarely as far as Cumberland County, NC); uncommon (rare in SC). September-October; October-November. A Southeastern Coastal Plain endemic: se. NC and ne. SC south to sw. GA, n. FL and s. AL, but apparently absent from s. SC and ne. GA. When in flower in wet savannas and powerline rights-of-way in Brunswick County, *Pleea* visually dominates areas up to hundreds of hectares. In sterile condition, it is recognizable by its leathery equitant leaves, bright red at their bases. [= RAB, FNA, GW, K, S, WH; = *Tofieldia tenuifolia* (Michaux) Utech – Z]

Tofieldia Hudson 1778 (Bog Asphodel)

A genus of about 7-8 species, of temperate to subarctic North America and Eurasia. There is controversy about the circumscription of *Tofieldia* relative to the related genera *Pleea* and *Triantha* (here recognized, but sometimes subsumed into *Tofieldia*). Some believe that *Tofieldia*, *Triantha*, and *Pleea* should be treated together in a broadly circumscribed *Tofieldia* (Utech 1978, Zomlefer 1997c); others that all three should be treated separately (Ambrose 1980; Packer 1993; Cruden 1991). Packer in FNA (2002a) has recently recognized *Triantha*, *Pleea*, and *Tofieldia* as separate genera, a conclusion followed here in part because of the ancient, relictual nature of these units. References: Zomlefer (1997c)=Z; Packer (1993); Ambrose (1980); Utech (1978); Hitchcock (1944)=Y; Tamura in Kubitzki (1998a); Packer in FNA (2002a); Cruden (1991).

Identification notes: In sterile condition, *Tofieldia glabra* can be distinguished from *Iris verna* by its minutely upwardly-scabrous margins (*Iris* has smooth margins).

Tofieldia glabra Nuttall, Carolina Bog Asphodel, White Asphodel. Cp (NC, SC): savanna-pocosin ecotones, wet savannas, seepage bogs; rare. (Late August-) late September-October; October-November. Endemic to the coastal plain and sandhills of NC and northern SC (the reports from GA are dubious). [= RAB, FNA, GW, K, S, Z]

Triantha (Nuttall) Baker

A genus of ca. 4 species, herbs, of North America and Japan. References: Zomlefer (1997c)=Z; Hitchcock (1944)=Y; Cruden (1991).

- 1 Perianth equal to or longer than the capsule; seeds with tails 1/2 or less as long as the body.....*Tr. racemosa*
 1 Perianth shorter than the capsule; seeds with at least 1 tail equal to or longer than the body.....*Tr. glutinosa*

Triantha glutinosa (Michaux) Baker, Sticky Bog Asphodel. Mt (GA, NC, VA), Pd (NC): bogs and seeps, especially over mafic or calcareous rocks; rare. July-August; September-October. Newfoundland west to British Columbia, south to w. NC, ne. GA (Jones & Coile 1988), WV, OH, n. IN, WI, MT, and OR. [= FNA, K, S; = *Tofieldia racemosa* var. *glutinosa* (Michaux) Ahles – RAB; = *Tofieldia glutinosa* (Michaux) Persoon – F, G, W; > *Tofieldia glutinosa* ssp. *glutinosa* – GW, Y, Z; > *Tofieldia glutinosa* var. *glutinosa* – C]

Triantha racemosa (Walter) Small, Coastal Plain Bog Asphodel. Cp (FL, GA, NC, SC, VA), Mt (VA), Pd (GA): savannas, savanna-pocosin ecotones, seepage bogs, sinkhole ponds (dolines) in the mountains of VA; uncommon (rare in VA). June-early August; late September-October. NJ south to nw. FL, west to e. TX; disjunct in c. TN. [= FNA, K, S; = *Tofieldia racemosa* var. *racemosa* – RAB; = *Tofieldia racemosa* (Walter) Britton, Sterns, & Poggenburg – C, F, G, GW, W, WH, Z]

TRILLIACEAE Lindley 1846 (Trillium Family)

A family of 5 genera and about 80 species, perennial herbs, of temperate Northern Hemisphere. References: Farmer & Schilling (2002).

Trillium Linnaeus 1753 (Trillium, Toadshade, Wake-robin)

A genus of about 50 species, of e. North America, w. North America, and e. Asia (especially se. North America). The genus *Trillium* in our area is difficult and complex. *Trillium* is now usually separated from the Liliaceae (along with Eurasian genera such as *Paris*) into the Trilliaceae (Zomlefer 1996, Kato et al. 1995, Kawano & Kato 1995, and others) or less drastically as part of the Melanthiaceae (Chase et al. 2000; Tamura et al. 2004). The traditional division of the genus into two well-marked subgenera, subgenus *Trillium*, the pedicellate trilliums, and subgenus *Phyllantherum*, the sessile-flowered trilliums, has been partly supported by molecular and morphological phylogenetic studies (Kawano & Kato 1995, Kato et al. 1995). These studies

support the monophyly of subgenus *Phyllantherum*, but suggest that subgenus *Trillium* consists of several groups which are only rather distantly related (Kawano & Kato 1995, Kazempour Osaloo et al. 1999; Farmer & Schilling 2002). Most species are slow-growing perennials; seedlings, juveniles, and depauperate or "tired" plants are one-leaved ("monilliums"), recognizable by the similar color, texture and venation of the single leaf to the three leaves of mature plants. In some species, such as *T. pusillum*, individual plants remain in the single-leaf stage for long periods of time, and populations may consist largely of juvenile plants. References: Patrick (1986)=Z; Patrick (2007)=V; Freeman (1975)=Y; Case & Case 1997=X; Patrick in Wofford (1989); Case in FNA (2002a); Mitchell (1990); Kato et al. (1995); Kawano & Kato (1995); Tamura in Kubitzki (1998a); Zomlefer (1996); Farmer & Schilling (2002). Key adapted from Patrick (1986, 2007), unpublished keys of J.D. Freeman, and other sources.

Identification notes: Teratological forms are frequent in some species, as, for instance, leaves, sepals, and stamens in 2's or 4's, petals sepaloid, or sepals petaloid, and so forth. What are called "leaves" in *Trillium* are actually bracts.

- 1 Leaves mottled with 2-3 different shades of green (very rarely the mottling not apparent); flower sessile; [subgenus *Phyllantherum*]..... **Key A**
- 1 Leaves solid green; flower on a pedicel (the pedicel sometimes very short or essentially absent in some varieties of *T. pusillum*); [subgenus *Trillium*].
- 2 Petals relatively thick in texture, straight-margined, maroon or white, rarely yellow or green (if white, turning brown with age); stigmas thicker at base, tapering gradually toward tip, distinct; ovary purple-black, maroon, pink, or white, 6-angled; [*Erectum* group]..... **Key B**
- 2 Petals relatively delicate in texture, wavy-margined, white to deep pink (if white, generally fading to pink with age); stigmas thin, uniform in thickness from base to apex, somewhat fused at the base into a short style; ovary greenish-white to white, 3- or 6-angled or-lobed..... **Key C**

Key A – trilliums with sessile flowers and mottled leaves (subgenus *Phyllantherum*)

- 1 Scape more-or-less decumbent in a gentle S-shape, the leaves lying on the ground, or nearly so; flower fragrance putrid; [*T. sessile* group].
- 2 Anther dehiscence extrorse (toward the outside of the flower); stamens about 0.25× as long as the petals; upper stem puberulent; petals 4-10 cm long; filaments 2-5 mm long..... *T. decumbens*
- 2 Anther dehiscence introrse (toward the inside of the flower); stamens about 0.5× as long as the petals; upper stem glabrous; petals 2.5-5.5 cm long; filaments 1-2 mm long..... *T. reliquum*
- 1 Scape erect, straight, the leaves borne well above the ground (the leaf tips sometimes nearly touching the ground); flower fragrance various.
- 3 Sepals abruptly deflexed between and below the leaves, distinctly descending below the approximately horizontal plane of the leaves; filaments about as long as incurved anthers; [*T. recurvatum* group].
- 4 Leaves sessile or subsessile, borne in a descending or drooping manner (similar to the sepals); petals usually > 4× as long as wide..... *T. lancifolium*
- 4 Leaves distinctly petiolate, borne in an ascending manner (strongly contrasting in position with the strongly deflexed sepals); petals usually ca. 2× as long as wide..... *T. recurvatum*
- 3 Sepals erect, ascending, or spreading, usually borne at or above the approximately horizontal plane of the leaves; filaments much shorter than the upright anthers.
- 5 Petals spreading to horizontal, with 1-2 spiral twists (looking something like an airplane propeller); anther dehiscence extrorse (toward the outside of the flower); [*T. sessile* group] [*T. stamineum*]
- 5 Petals erect to slightly spreading, not spirally twisted; anther dehiscence introrse (toward the inside of the flower), or latrorse (toward the side).
- 6 Petals broadly spatulate, clawed, broadly rounded (though sometimes with an apiculus) at the tip; petals pale lemon-yellow (the claws greenish or maroon); flower fragrance clove-like; [of the Savannah River drainage, from sw. NC southeastward along the GA-SC border]; [*T. sessile* group]..... *T. discolor*
- 6 Petals lanceolate, elliptic, obovate, or oblanceolate, but not broadly spatulate and distinctly clawed, generally acute at the tip; petals maroon-red, purplish-brown, yellow, or green; flower fragrance various; [collectively widespread in our area].
- 7 Stigmas > 1.5× as long as the ovary; stamens about 0.5× as long as the petals; anther connectives prominently prolonged into a beak 1.0-5.0 mm long (beyond the anther sacs); [*T. sessile* group] *T. sessile*
- 7 Stigmas as long as the ovary or shorter; stamens < 0.5× as long as the petals; anthers blunt, the connectives extended < 1.0 mm beyond the anther sacs.
- 8 Ovary ellipsoid; leaves acute, the margins of the outer 1/3 more or less straight; leaf blade mottled with 3 or more shades of green, the palest shade forming a very conspicuous pale silvery-green streak along the midvein; [of the Coastal Plain and fall-line area of GA, AL, and FL panhandle]; [*T. sessile* group].
- 9 Stem 2.5-3× as long as the leaves; petals oblanceolate-obovate, usually 1.5-3× as long as wide..... *T. decipiens*
- 9 Stem 1-2× as long as the leaves; petals narrowly elliptic to oblanceolate-obovate, usually 3-5× as long as wide..... *T. underwoodii*
- 8 Ovary ovoid; leaves acute to acuminate, the margins of the outer 1/3 convex; leaf blade mottled with 2-3 shades of green, paler shades sometimes prominent along the midvein, but not as above; [collectively widespread in our area]; [*T. maculatum* group].
- 10 Petals < 4× as long as wide, elliptic-oblanceolate to oblanceolate; [of inland provinces, rarely in the Coastal Plain].
- 11 Flower fragrance fruity-spicy, like green apples or *Calycanthus* (rarely musky); petals maroon, bronze, green, yellow; portions of ovary and stamens purplish during anthesis..... *T. cuneatum*
- 11 Flower fragrance lemon-like; petals greenish-yellow darkening to yellow; ovary and stamens greenish-white during anthesis *T. luteum*
- 10 Petals > 4.5× as long as wide, narrowly oblanceolate-spatulate to linear-oblanceolate; [of the Coastal Plain, rarely further inland].
- 12 Ovary 3-angled at base of stigmas (rarely hexagonal); petals 7-17 mm wide, narrowly spatulate (appearing clawed); outer whorl of stamens broader, anther dehiscence introrse; flower fragrance faintly spicy-fragrant, banana-like; [of AL, n. FL, GA, and e. SC]..... *T. maculatum*
- 12 Ovary 6-angled; petals 3-8 mm wide, linear-oblanceolate, narrowly elliptic, to linear-lanceolate (weakly or not clawed); flower fragrance putrid, like rotting meat; [of MS and LA].
- 13 Petals 3-5 mm wide; anther dehiscence introrse; anther connective extending 1-1.5 mm beyond the anther sacs.....

-[*T. foetidissimum*]
 13 Petals 4-8 mm wide; anther dehiscence latrorse; anther connective scarcely extending beyond the anther sacs
[*T. ludovicianum*]

Key B – trilliums with unmottled leaves and pedicellate flowers, of the *Erectum* Group

- 1 Flowers held below the leaves (the pedicel declined below a horizontal plane).
 2 Stamens far exceeding the pistil, filaments as long as the ovary or longer, at least partly maroon, the anther sacs yellow to maroon; ovary small, globose, 3-12 mm long, dark purplish black; flower fragrance pungent, rose-like; pedicel long, 3-13 cm long; petals strongly overlapping, usually maroon (rarely white or whitish) *T. vaseyi*
 2 Stamens at most 1.5× longer than the pistil, filaments shorter than the ovary, white (less commonly purplish), the anther sacs lavender to vivid purple (or albino); ovary white to pink or dull red, large, ovoid, 10-17 mm long; flower fragrance various; pedicel short to long, 1.5-12 cm long; petals not strongly overlapping, usually white (rarely maroon).
 3 Pedicels short, 1.5-3 cm long.
 4 Anthers 7.5 mm long or less, about as long as the filaments or shorter; petals narrowly elliptic to obovate, often scarcely larger than the sepals, delicate, occasionally margined in pink or green; [of damp forests of n. VA and northwards] *T. cernuum*
 4 Anthers 7.0 mm long or more, longer than the filaments; petals ovate to elliptic, much broader than the sepals; [of mesic forests of n. NC southwards] *T. rugelii*
 3 Pedicels long, 4-12 cm long.
 5 Stamens about as long as the ovary or slightly longer; filaments short, ca. 1/3 the length of the anthers or shorter; filaments ½ as long as the ovary or shorter; pollen creamy to pale yellow; filaments and anthers white, the anthers at least in part somewhat appressed against the ovary *T. flexipes*
 5 Stamens far exceeding ovary height; filaments ca. ½ the length of the anthers; pollen creamy, yellow, or pale grayish purple; anthers and filaments also variable in color, mostly white, occasionally purplish; anthers mostly longer than the ovary and not appressed against it *T. species 2*
 1 Flowers held at or above the level of the leaves (the pedicel nearly horizontal, inclined above the horizontal, or erect).
 6 Ovary flask-shaped, broadest near the base, usually white to pinkish (sometimes darker); petals usually white to creamy white (maroon forma occasional)
 7 Stamens about as long as the ovary or slightly longer; filaments short, ca. 1/3 the length of the anthers or shorter; filaments ½ as long as the ovary or shorter; pollen creamy to pale yellow; filaments and anthers white, the anthers at least in part somewhat appressed against the ovary *T. flexipes*
 7 Stamens far exceeding ovary height; filaments ca. ½ the length of the anthers; pollen creamy, yellow, or pale grayish purple; anthers and filaments also variable in color, mostly white, occasionally purplish; anthers mostly longer than the ovary and not appressed against it *T. species 2*
 6 Ovary globose, widest near the middle, black to purplish black; petals white, maroon, yellowish, or otherwise.
 8 Petals lanceolate to narrowly ovate or elliptic, spreading from base in the same plane as the sepals, rarely > 2× as broad as the sepals; sepals 0.5-0.8× as long as the pedicel. weakly sulcate-tipped (keeled and upturned near apex); flower fragrance unpleasant, musty
 *T. erectum*
 8 Petals ovate, overlapping in some instances and forming a cup-shaped base, variably recurved apically, > 2× as broad as the sepals; sepals < 0.5 as long as the pedicel, sulcate-tipped; fragrance pleasant, sweet to fungal.
 9 Sepals 0.4-0.7× as long as the pedicel; leaves broadly elliptic; stamens 1.2-1.8× pistil height; flowers generally large, petals much longer than the sepals; sepals green; petals usually white (rarely maroon); flower fragrance sweet, like green apples; [of sw. NC and nw. SC in our area] *T. simile*
 9 Sepals 0.2-0.4× as long as the pedicel; leaves broadly obovate; stamens 0.9-1.6× pistil height; flowers relatively small, petals only slightly longer than the sepals; sepals suffused with purple; petals usually maroon (rarely white); flower fragrance fungal, like fresh mushrooms; [of sw. VA and nw. NC in our area] *T. sulcatum*

Key C – trilliums with unmottled leaves and pedicellate flowers, of various affinities

- 1 Petals white with triangular red blaze (rarely entirely white or pinkish); anther sacs lavender to white, dehiscence extrorse; fruit a red berry; leaves long-acuminate; [of acidic sites in the Mountains, generally strongly associated with either *Pinus*, *Tsuga*, *Picea*, *Rhododendron*, or other heaths] *T. undulatum*
 1 Petals white to deep pink, lacking a red blaze; anther sacs yellow, dehiscence introrse; fruit a white to greenish-white, fleshy, irregularly dehiscent capsule; leaves obtuse to acute (or somewhat acuminate in *T. grandiflorum*); [of less distinctly acidic sites, collectively widespread in our area].
 2 Pedicel declined below the leaves (rarely erect); sepals arcuate-recurved; anthers irregularly twisted outward; pollen egg-yolk yellow
 *T. catesbaei*
 2 Pedicel inclined above leaves to strictly erect; sepals not arcuate-recurved; anthers erect, regular; pollen light yellow.
 3 Sepals narrower than the petals, acute; anthers white to greenish-white between the anther sacs; leaves obtuse, acute, or acuminate; pedicel somewhat angled from the vertical.
 4 Ovary obscurely 3-lobed; leaves < 5 cm long, blue-green, obtuse *T. nivale*
 4 Ovary sharply 6-angled (-winged); leaves > 5 cm long, green, acute to acuminate.
 5 Petals obovate, tightly rolled at base, abruptly flared near the apex; leaves broadly elliptic, acuminate; style minute, < 1.0 mm long *T. grandiflorum*
 5 Petals elliptic, loose, gradually separating; leaves ovate, acute; style conspicuous, > 1.5 mm long *T. persistens*
 3 Sepals about as broad as the petals or broader, obtuse; leaves obtuse; anthers purplish-green between anther sacs; pedicel erect through fruiting; [*Trillium pusillum* complex].
 6 Leaves with stomates on the upper surface, appearing farinose; [of n. GA] *T. pusillum* var. 2
 6 Leaves without stomates on the upper surface, appearing glabrous.
 7 Pedicel < 10 (-12) mm long.

- 8 Pedicel (0-) 0.5-1 mm long; leaves (1.5-) 2.0-2.4 (-2.9) × as long as broad; leaves (14-) 15-20 (-22.5) mm wide; filaments (4.5-) 4.6-5.8 (-8) mm long; [of upland woods of w. VA and e. WV Mountains] *T. pusillum* var. *monticulum*
- 8 Pedicel (0.5-) 1-6.5 (-11) mm long; leaves (2.1-) 2.5-3.8 (-6) × as long as broad; leaves (6-) 10-17 (-25) mm wide; filaments (2.5-) 3-5 (6.5) mm long; [of wetland woods].
- 9 Anthers (3.2-) 4.5-6 (-7) mm long; stamens (5.7-) 8.4-10.9 (-12.5) mm long; stigmas (1-) 2.1-3 (-5) mm long; leaves elliptic; [of the outer Coastal Plain of e. VA and ne. NC] *T. pusillum* var. *5*
- 9 Anthers (2.5-) 2.7-4.8 (-6.8) mm long; stamens (5.7-) 6-9.2 (-13.2) mm long; stigmas (1-) 1.2-2.5 (-4.7) mm long; leaves ovate; [of the upper Coastal Plain and Piedmont of ne. NC, se. VA, and Mountains of sw. VA].
- 10 Pedicel (1.2-) 1.8-6.6 (-11) mm long; stamens (5.7-) 6-7.6 (-13.2) mm long; stigmas (1-) 1.2-2 (-2.5) mm long; [of Piedmont to edge of upper Coastal Plain] *T. pusillum* var. *4*
- 10 Pedicel (0.5-) 1-2.1 (-7) mm long; stamens (6-) 7.5-9.2 (-11) mm long; stigmas (1-) 2-2.5 (-4.7) mm long; [of upper Coastal Plain] *T. pusillum* var. *virginianum*
- 7 Pedicel 10-56 mm long.
- 11 Leaves ascending; sepals ca. 1.4× as long as the petals; [of sphagnum bogs in the s. SC sandhills] *T. pusillum* var. *3*
- 11 Leaves horizontal to declining; sepals 0.9-1.1× as long as the petals.
- 12 Leaves narrower, (1.9-) 3-4.1 (-5.6) × as long as wide; pedicel (23-) 25-33 (-56) mm long; [of dry pine woods] *T. pusillum* var. *pusillum*
- 12 Leaves broader, (2-) 2.7-3.4 (-5.5) × as long as wide; pedicel (7-) 13-30 (-45) mm long.
- 13 Leaves elliptic, rounded; sepals (13-) 18-25 (-30) long, (4-) 6-8 (-12) mm wide, (1.8-) 2.7-3.1 (-4) × as long as wide; [generally of swamps and floodplains] [*T. pusillum* var. *1*]
- 13 Leaves ovate, acute; sepals (14-) 22-30 (-41) long, (4-) 6-11 (-17) mm wide, (2-) 3-4.3 (-5.6) × as long as wide; [generally of upland rocky slopes] *T. pusillum* var. *ozarkanum*

Trillium catesbaei Elliott, Catesby's Trillium, Bashful Trillium, Rosy Wake-robin. Pd (GA, NC, SC), Mt (GA, NC, SC), Cp (GA, NC): bottomland forests, mesic slopes, cove forests; common (uncommon in Mountains). Late March-early June; July-August. Nc. NC south to sw. GA and se. AL, north in the interior to n. AL and se. TN, centered in the Piedmont from NC to GA, but extending into the Mountains and Coastal Plain. Petals white to pink. [= RAB, FNA, K, S, V, W, X, Z]

Trillium cernuum Linnaeus, Northern Nodding Trillium. Mt (VA): damp forest with *Fraxinus nigra* and *Ulmus americana*; rare (VA Rare). Late April-May. Newfoundland, Hudson Bay area, and se. Saskatchewan south to n. VA, ne. WV, n. IN, n. IL, n. IA, and SD. Petals white, pink, maroon, or green. [= FNA, K, W, X, Z; < *T. cernuum* – RAB, F, S (apparently also including *T. rugelii*); > *T. cernuum* var. *cernuum* – C, G; >> *T. cernuum* var. *macranthum* A.J. Eames & Wiegand – C, G]

Trillium cuneatum Rafinesque, Sweet Betsy, Purple Toadshade, Large Toadshade, Wedge-petal Trillium, Bloody Butcher. Pd, Mt (GA, NC, SC), Cp (GA): in rich soils of cove forests, moist slopes, and bottomlands, usually over mafic or calcareous rocks; uncommon, but locally abundant. Mid March-April; late May-June. Centered in the Southern Appalachians (but is more abundant in adjacent physiographic provinces), extending north to the Highland Rim of KY, west to the Interior Low Plateau of TN, south to the Coastal Plain of MS and AL, and east to the Piedmont of GA, SC, and NC. Petals maroon, yellow, green, or various intermediate shades. [= C, FNA, K, V, W, X, Y, Z; = *T. cuneatum* var. *cuneatum* – RAB; > *T. cuneatum* – F; >> *T. viride* Beck – F, misapplied with respect to NC material; < *T. viride* var. *luteum* (Muhlenberg) Gleason – G, misapplied (also see *T. luteum*); > *T. hugeri* Small – S; >> *T. underwoodii* – S, misapplied]

Trillium decipiens J.D. Freeman, Chattahoochee Trillium, Deceptive Trillium. Cp (AL, FL, GA): moist forests; uncommon (rare in FL). Late January-early April. FL Panhandle (Jackson and Walton counties) and sc. AL east to ec. GA, and might be expected in SC, near the Fall Line. It is similar to *T. underwoodii*. [= FNA, K, V, WH, X, Y, Z]

Trillium decumbens Harbison, Decumbent Trillium. Mt, Pd, Cp (GA): moist forests; uncommon (rare in Piedmont and Coastal Plain). Mid-March-April. Se. TN (Chester et al. 1993) south and west to nw. GA and nc. AL, and disjunct in Houston County, in central GA Coastal Plain; it should be sought in extreme sw. NC, an extremely "under-botanized" area. [= FNA, K, S, X, Y, Z]

Trillium discolor Wray ex Hooker, Pale Yellow Trillium, Pale Trillium, Small Yellow Toadshade. Mt (GA, NC, SC), Pd (GA, SC): rich cove forests, restricted to the Savannah River drainage; rare (GA Special Concern, NC Threatened, SC Rare). Late March-early May; June-July. Endemic to the Savannah River drainage of nw. SC, ne. GA, and sw. NC, occurring in the Blue Ridge and Piedmont. In NC it is restricted to a few sites along the Whitewater and Thompson Rivers. Petals pale yellow, with maroon or greenish claws. [= RAB, FNA, K, S, V, W, X, Y, Z]

Trillium erectum Linnaeus, Red Trillium, Purple Trillium, Stinking Willie, Stinking Benjamin, Wake-robin. Mt (GA, NC, SC, VA): wooded slopes, usually at middle to high elevations; common. April-early June; July-August. New Brunswick, Québec, and MI south to w. NC, nw. SC, n. GA, e. TN, IN, and se. WI. Petals maroon, white, yellow, green, or various intermediate shades. [= C, K, V, W, X, Z; < *T. erectum* var. *erectum* – RAB (also see *T. sulcatum*); < *T. erectum* – F, G, S (also see *T. sulcatum*); > *T. erectum* var. *erectum* – FNA; > *T. erectum* var. *album* (Michaux) Pursh – FNA]

Trillium flexipes Rafinesque, Bent White Trillium. Mt (GA, NC, VA): moist coves over mafic or calcareous rocks; rare (GA Special Concern, NC Rare, VA Rare). April. E. PA, s. Ontario and s. MN south to w. NC, nw. GA, n. AL, n. MS, mostly west of the Blue Ridge, but scattered in the Blue Ridge of NC, and disjunct east of the Blue Ridge in DE, PA, and MD. Petals white or maroon. [= C, F, FNA, K, V, W, X, Z; < *T. erectum* var. *vaseyi* – RAB; = *T. gleasoni* Fernald – G; = *T. declinatum* (A. Gray) Gleason – S, misapplied]

Trillium grandiflorum (Michaux) Salisbury, Large-flowered Trillium, White Trillium, Great White Trillium. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): rich coves and mesic slopes, also less typically on ridges over "rich" rock types; common (rare in SC). April-May; July-August. S. Québec, s. Ontario, MI, and MN, south to NJ, c. NC, nw. SC, n. GA, n. AL, s. IL, and IA. Petals white to pink. [= RAB, C, F, FNA, G, K, S, V, W, X, Z]

Trillium lancifolium Rafinesque, Lanceleaf Trillium, Narrowleaf Trillium. Pd (SC), Mt (GA), Cp (FL, GA): rich forests over marble, limestone, and other calcareous substrates, floodplain forests; rare. Late March-April. Nc. SC and se. TN south

through w. GA and AL to Panhandle FL and se. AL. Petals purple, green, or greenish-purple. [= FNA, K, V, WH, Y, X, Z; = *T. lanceolatum* (S. Watson) Boykin ex Small – RAB, S]

Trillium luteum (Muhlenberg) Harbison, Yellow Trillium, Yellow Toadshade, Wax Trillium, Lemon-scented Trillium. Mt (GA, NC, VA*): moist coves over mafic or calcareous rocks, restricted to the vicinity of the Great Smokies; uncommon (but locally abundant). Mid March-April; late May-June. Nearly endemic to the Southern Appalachians: w. NC, e. TN, nw. GA, and se. KY, allegedly disjunct in c. AL (planted and naturalized in Frederick County, VA). Petals yellow. [= C, F, FNA, K, V, W, X, Y, Z; = *T. cuneatum* var. *luteum* (Muhlenberg) Ahles – RAB; < *T. viride* Beck var. *luteum* (Muhlenberg) Gleason – G (also see *T. cuneatum*); < *T. sessile* – S, misapplied]

Trillium maculatum Rafinesque, Mottled Trillium, Spotted Trillium. Cp (FL, GA, SC), Pd (GA, SC): rich forests and floodplains, over calcareous materials such as coquina limestone ("marl") or on shell middens; uncommon. Early February-mid April. S. SC south to n. FL, west to sc. AL. Petals maroon or yellow. [= FNA, K, V, WH, X, Y, Z; < *T. viride* – RAB, misapplied; < *T. sessile* – S, misapplied]

Trillium nivale Riddell, Snow Trillium, Dwarf White Trillium. Mt (VA): rocky, calcareous forests; rare (VA Rare). Early March-early April. MA, sw. PA, MI, WI, s. MN, and e. SD south to n. VA, KY, s. IN, s. IL, s. MO, and se. NE. Petals white to pink. [= C, F, FNA, G, K, X, Z]

Trillium persistens Duncan, Persistent Trillium. Mt (GA, SC): acidic forests with hemlocks and heaths; rare (US Endangered, GA Endangered, SC Rare). April. Endemic to a short stretch of the Tallulah-Tugaloo river system in nw. SC and ne. GA. Petals white to pink. [= FNA, K, V, W, X, Z]

Trillium pusillum Michaux var. *monticulum* Bodkin & Reveal. Mt (VA): dry to dry-mesic forests and woodlands, moist forests along small mountain streams; rare. Endemic to nw. VA, e. WV, and w. MD. NC. Var. *monticulum* Bodkin & Reveal has been controversial; see Cabe (1995) and Cabe & Werth (1995) for additional discussion of variation within *T. pusillum* in Virginia and elsewhere. Petals white to pink. [< *T. pusillum* – Z; < *T. pusillum* var. *virginianum* – C, K; < *T. pusillum* var. *pusillum* – FNA; = *T. pusillum* var. *monticola* Bodkin & Reveal – X, orthographic error; = *T. monticola* in prep.]

Trillium pusillum Michaux var. *ozarkanum* (Palmer & Steyermark) Steyermark. Mt (NC): dry to dry-mesic slopes, in NC under *Quercus coccinea* and *Kalmia latifolia*; rare. Centered in the Ozarks of sw. MO, nw. AR, and e. OK; disjunct eastward at scattered localities in sc. KY, nc. TN, sw. NC, and s. MS. Petals white to pink. [= K, X; < *T. pusillum* – RAB, G, S, Z; < *T. pusillum* var. *pusillum* – FNA; = *T. ozarkanum* Palmer & Steyermark]

Trillium pusillum Michaux var. *pusillum*, Carolina Least Trillium, Carolina Dwarf Trillium. Cp (NC, SC): ecotones of calcareous savannas and swamp forests in the lower Coastal Plain; rare. Late March-May; June-July. Endemic to the outer Coastal Plain of e. NC and e. SC. *T. pusillum* is somewhat reminiscent of a tiny *T. grandiflorum*. The *T. pusillum* complex has a wide but very fragmented range, involving most of the Southeastern states. In addition to the taxa treated here, the complex includes *T. texanum* Buckley (of e. TX). The *Trillium pusillum* complex is currently undergoing study by Susan Farmer (Univ. of Tennessee); preliminary analysis shows that the published varieties are "good" and that the recognition of additional taxa is warranted. Petals white to pink. [= X; < *T. pusillum* var. *pusillum* – C, F, FNA, K; < *T. pusillum* – RAB, G, S, Z; = *T. pusillum* (sensu stricto)]

Trillium pusillum Michaux var. *virginianum* Fernald, Virginia Least Trillium, Virginia Dwarf Trillium. Cp (VA): bottomland forests along small streams in the upper Coastal Plain, swamps and bottomland forests, also mesic beech islands in swamp forests; rare. Late March-May; June-July. Var. *virginianum* occurs in the Coastal Plain of se. VA. Petals white to pink. [= F, FNA, X; < *T. pusillum* – RAB, G, S, Z; < *T. pusillum* var. *virginianum* – C, K (also see var. *monticulum*); = *T. virginianum* (Fernald) C.F. Reed]

Trillium pusillum var. 2, Georgia Least Trillium. Mt (GA): {habitat}; rare. Endemic to n. GA. Apparently most closely related to *Trillium texanum*. Petals white to pink. Under study by Susan Farmer. [< *T. pusillum* – V; = *T. georgianum* in prep.]

Trillium pusillum var. 3, Aiken Least Trillium. Cp (SC): seepage bogs; rare. Endemic to sc. SC. Petals white to pink. Under study by Susan Farmer. [< *T. pusillum*; = *T. telmacola* in prep.]

Trillium pusillum var. 4, Carolina Least Trillium. Cp (NC), Mt (VA): swampy forests, bottomland forests along small streams in the upper Coastal Plain; rare. E. NC (upper Coastal Plain and adjacent Piedmont), moist mafic areas in Grayson Co. VA. The Grayson County site is within a kilometer of the Alleghany County, NC border, and the plant may be found to occur in nw. NC. Petals white to pink. Under study by Susan Farmer. [< *T. pusillum*; = *T. carolinianum* in prep.]

Trillium pusillum var. 5, Dismal Swamp Least Trillium. Cp (NC, VA): swampy forests; rare. E. VA south to ne. NC. Petals white to pink. Under study by Susan Farmer. [< *T. pusillum*; = *T. palustris* in prep.]

Trillium recurvatum Beck, Prairie Trillium, Prairie Wake-rob. Mt, Pd (NC): rich soils of cove over calcareous rock; rare (NC Rare). W. OH west to s. MI, s. WI, and e. IA, south to c. TN, c. AL, c. MS, n. LA, and e. TX; disjunct in the Cumberland Plateau of e. TN, e. KY, and the Blue Ridge and w. Piedmont of NC. The two known NC occurrences (Catawba and Madison counties) appear to be native. Petals maroon or yellow. [= C, F, FNA, G, K, S, X, Y, Z]

Trillium reliquum J.D. Freeman, Relict Trillium. Pd (GA, SC), Cp (GA): rich forests on bluffs and ravine slopes; rare (US Endangered, GA Endangered, SC Rare). Mid March-late April. Known from two disjunct areas, along the Savannah River in the vicinity of Augusta, on the border of SC (Aiken County) and GA (Richmond counties), and along the Chattahoochee River in sw. GA (Clay and Early counties). [= FNA, K, V, X, Y, Z]

Trillium rugelii Rendle, Southern Nodding Trillium. Mt, Pd (GA, NC, SC): rich woodlands and forests over mafic or calcareous rocks; rare (NC Watch List, SC Rare). April-early May. W. NC and e. TN south to c. GA, and c. AL. Petals white or maroon. [= FNA, K, V, W, X, Z; < *T. cernuum* – RAB, F, S; < *T. cernuum* var. *macranthum* A.J. Eames & Wiegand – C, G]

Trillium sessile Linnaeus, Sessile Trillium, Sessile Toadshade, Toad Trillium. Mt (VA), Pd (VA), Cp (NC, VA): rich forests, in NC limited to very rich soils of natural levees and lower slopes along the Roanoke River; uncommon in VA, rare in NC (NC Rare). March-April. Primarily a species of the northern Midwest, *T. sessile* ranges from MD, w. PA, w. NY, s. MI, n. IL and n. MO, south to e. VA, ne. NC, c. TN, n. AL, and n. AR. The easternmost occurrences are disjunct populations east of the Blue Ridge, in MD, VA, and along the Roanoke River in ne. NC. Petals maroon or green. [= C, F, FNA, G, K, W, X, Y, Z]

Trillium simile Gleason, Sweet White Trillium. Mt (GA, NC, SC): very rich soils of slopes and coves over mafic or calcareous rocks, often also in or near seepage; rare (GA Special Concern, NC Rare, SC Rare). Late March-early May; June-July. A Southern Appalachian endemic: Blue Ridge of w. NC, nw. SC, e. TN, and n. GA. Petals white or very rarely maroon. [= FNA, K, S, V, W, X, Z; < *T. erectum* var. *vaseyi* – RAB]

Trillium species 2, Amicalola Trillium. Mt (GA): rich forests; rare. Under study by Tom Patrick and Susan Farmer. [“Amicalola Trillium” – V]

Trillium sulcatum T. Patrick, Southern Red Trillium, Barksdale’s Trillium. Mt (GA, NC, VA): coves and moist slopes; uncommon (rare in GA). April-May. Primarily a species of the sedimentary rock Appalachians, *T. sulcatum* ranges from s. WV, sw. VA, and e. KY south to nw. NC (where it enters the Blue Ridge), w. TN, nw. GA, and ne. AL. This species seems quite distinctive for its small, generally maroon flowers (with strongly sulcate sepals purplish as well), borne on very long pedicels. Petals maroon or white. [= C, FNA, K, V, W, X, Z; < *T. erectum* var. *erectum* – RAB; < *T. erectum* – F, G, S]

Trillium underwoodii Small, Underwood’s Trillium. Cp (AL, FL, GA): moist forests; uncommon. Late February-mid April. N. FL north to wc. GA and c. and s. AL. The only erect trillium with the stems < 2× as long as the leaves. [= FNA, K, S, V, WH, X, Y, Z]

Trillium undulatum Willdenow, Painted Trillium, Striped Wake-robin. Mt (GA, NC, SC, VA): acidic soils of ridges, slopes, and bog margins, mostly at high elevations and often associated with *Rhododendron*, *Tsuga*, *Pinus*, or *Picea*; common (SC Rare). Late April-May; late July-August. New Brunswick, e. Québec, s. Ontario, and MI, south to w. NC, nw. SC, n. GA, e. TN, and ne. OH. Of all our species, this is the species best adapted to acidic soils. Petals white with a red blaze. [= RAB, C, F, FNA, G, K, S, V, W, X, Z]

Trillium vaseyi Harbison, Sweet Trillium, Vasey Trillium, Sweet Beth. Mt (GA, NC, SC), Pd (GA): cove forests; uncommon. Late April-early June. This species is a Southern Appalachian endemic: w. NC and e. TN south to nw. SC, n. GA, and ne. AL. Perhaps the largest trillium species, with the stems 7 dm tall. Petals maroon or white. [= FNA, K, S, V, W, X, Z; < *T. erectum* var. *vaseyi* (Harbison) Ahles – RAB (also see *T. simile* and *T. flexipes*)]

Trillium foetidissimum J.D. Freeman, Stinking Wake-robin. Bluffs, ravines, bottomlands. Late February-early April. MS west to LA. [= FNA, K, X, Y, Z]

Trillium ludovicianum Harbison, Louisiana Wake-robin. Floodplains, streambanks, ravine forests. Early March-April. MS west to LA. Reports of this species for AL are based on specimens of *Trillium species 3*. [= FNA, K, X, Y, Z]

Trillium pusillum var. 1, Alabama Least Trillium. C. TN south to n. AL. Petals white to pink. Under study by Susan Farmer. [< *T. pusillum* var. *pusillum* – C, F, FNA, K; < *T. pusillum* – G, S, Z; = *T. pusillum* var. *alabamicum* – X (nomen nudum); = *T. alabamicum* in prep.]

Trillium species 1. Pd (SC): rich forests; rare. Under study by L.L. Gaddy. Somewhat similar to *T. lancifolium* and *T. recurvatum*. So far as is known, endemic to Kershaw County, SC, along the Wateree River. With clawed, bicolored petals (the claw maroon and the blade green) and green sepals reflexed somewhat (in the same plane as the drooping leaves). [previously misidentified as *T. lancifolium*] {not yet keyed}

Trillium species 3, Lookout Mountain Trillium. Lookout Mountain area, resembles *T. ludovicianum*. Under study by Susan Farmer. [< *T. ludovicianum* – V] {not yet keyed}

Trillium stamineum Harbison, Twisted Trillium. Floodplains, slopes, especially over limestone. Late March-mid May. C. TN (Chester et al. 1993) south to c. AL and e. MS. [= FNA, K, S, X, Y, Z]

TYPHACEAE A.L. de Jussieu 1789 (Cattail Family)

A family of 2 genera with 16-30 species, wetland herbs, cosmopolitan. References: Kaul in FNA (2000); Smith in FNA (2000); Thieret & Luken (1996); Kubitzki in Kubitzki (1998b). [including SPARGANIACEAE]

- 1 Inflorescences headlike, globular.....*Sparganium*
1 Inflorescences spikelike, cylindrical.....*Typha*

Sparganium Linnaeus 1753 (Bur-reed)

A genus of about 14 species, wetland and aquatic herbs, primarily circumboreal in arctic and temperate regions, but also in the tropics of Asia, and temperate Australia. References: Kaul in FNA (2000); Thieret (1982)=Z; Beal (1960)=Y; Crow & Hellquist (2000b)=X; Kubitzki in Kubitzki (1998b).

- 1 Stigmas 2; fruits truncate at apex, obpyramidal, very abruptly beaked, 4-8 mm broad.....*S. eurycarpum*
1 Stigmas 1; fruits rounded or acuminate to a beak at the apex, elliptic, fusiform, or obovate, 1-3 (-4) mm broad.
2 Pistillate heads (primarily those upward) supra-axillary (borne distinctly above the axils of the subtending leaf-like bracts); tepals lacking subapical dark spot.....*S. emersum*
2 Pistillate heads (all) axillary (borne in the axils of the subtending leaf-like bracts) or several on axillary branches which lack leaf-like bracts; tepals with prominent subapical dark spot.
3 Mature fruits dull, finely pitted, the body 3-5 mm long; fruiting heads 1.5-2.5 cm in diameter; branches of the inflorescence with (0-) 1-3 pistillate heads (in addition to staminate heads); stigma 0.8-1.9 (-2.8 in the Coastal Plain) mm long.....*S. americanum*
3 Mature fruits shiny, smooth, the body 5.5-7 mm long; fruiting heads 2.5-3.5 cm in diameter; branches of the inflorescence with 0 (-1) pistillate heads (in addition to staminate heads); stigma 1.5-3 mm long.....*S. androcladum*

Sparganium americanum Nuttall, American Bur-reed. Cp, Mt, Pd (GA, NC, SC, VA): streams, marshes, ponds, pools, often submerged; common (rare in NC and SC Piedmont). May-September. Newfoundland west to MN, south to c. peninsular FL and c. TX. Beal (1960) discusses the interesting variation in *S. americanum*, perhaps worthy of taxonomic recognition. The

"Appalachian Race" has stigmas 0.6-0.9 mm long, inflorescence branches 0-3, and relatively narrow leaves; in our area it is montane in distribution, and in general is Appalachian, Ozarkian, and northern. The "Coastal Race" has stigmas 1.5-2.8 mm long, 2-5 inflorescence branches, and relatively wide leaves; in our area it is primarily of the Coastal Plain, disjunct to the mountains of NC and SC south of the Asheville Basin (like many Coastal Plain taxa), and in general is nearly limited to the Coastal Plain, ranging from MA south to FL, west to e. TX, and north in the interior to sc. TN, s. IN, and s. MO. The "Ubiquitous Race" is intermediate, with stigmas 1.0-1.4 mm long; it occurs throughout the range of the species. The pattern is suggestive of imperfect evolutionary separation of two taxa. [= RAB, C, F, FNA, G, GW, K, W, WV, X, Y, Z; > *S. americanum* – S; > *S. eurycarpum* – S, misapplied]

Sparganium androcladum (Engelmann) Morong. Cp, Pd (VA): marshes, shores; rare (VA Rare). May-September. ME and Québec west to MN, south to se. VA, s. WV, e. TN, s. MO, and ne. OK. [= C, F, FNA, G, K, W, WV, X, Y, Z]

Sparganium emersum Rehmann, Greenfruit Bur-reed. Mt (NC, VA): bogs, stream margins; rare (NC Rare, VA Rare). May-September. Newfoundland and e. Québec west to s. Alberta and WA, south to w. NC, IN, IA, CO, and CA. [= FNA, X; > *S. chlorocarpum* Rydberg – RAB, C, F, G, W, WV, Y, Z; > *S. chlorocarpum* var. *acaule* (Beeby) Fernald – F; ? *S. angustifolium* Michaux – K, misapplied; > *S. acaule* (Beeby) Rydberg]

Sparganium eurycarpum Engelmann ex A. Gray, Giant Bur-reed. Cp, Pd, Mt (VA): marshes, shores; uncommon (VA Watch List). Nova Scotia west to British Columbia, south to w. VA, n. WV, IN, OK, and CA. [= C, F, FNA, G, K, W, WV, X; = *S. erectum* Linnaeus ssp. *stoloniferum* (Graebner) C.D.K. Cook & M.S. Nicholls]

Sparganium angustifolium Michaux, Narrow-leaved Bur-reed. South to n. NJ and n. PA; attributed to VA and WV by Kartesz (1999), apparently erroneously. [= C, FNA, K, X] {not keyed; synonymy incomplete}

***Typha* Linnaeus 1753 (Cattail)**

A genus of 8-13 species, wetland herbs, cosmopolitan. References: Ward (2007a)=Z; Smith in FNA (2000); Kubitzki in Kubitzki (1998b).

- 1 Staminate and pistillate portions of spike normally contiguous; pistillate portion of spike (1.5-) 2.0-3.5 cm in diameter at maturity; leaves (8-) 10-24 mm wide, flat on one side; stigmas lance-ovate, fleshy, persistent; pollen grains in 4's; [in acid to alkaline waters, widespread in our area] ***T. latifolia***
- 1 Staminate and pistillate portions of spike normally separated by a gap; pistillate portion of spike 0.5-2.2 (-2.5) cm in diameter at maturity; leaves 4-15 mm wide, biconvex (or flat on one side in *T. ×glauca*); stigmas linear to lance-linear, not fleshy (or slightly so in *T. ×glauca*), either quickly deciduous or persistent; pollen grains single; [in circumneutral to alkaline waters, primarily in tidal situations in the outer Coastal Plain, but scattered inland, especially in VA].
 - 2 Pith at base of stem yellowish buff; stigmas lance-linear, slightly fleshy; pistillate portion of spike 1.6-2.5 cm in diameter at maturity; pistillate bracteoles usually absent (or present on a few flowers)..... ***T. ×glauca***
 - 2 Pith at base of stem white; stigmas linear, not fleshy; pistillate portion of spike 0.5-2.5 cm in diameter at maturity; pistillate bracteoles present on all flowers.
 - 3 Leaves 4-7 (-11) mm wide, auriculate at the junction of the blade and the sheath; pistillate portion of spike 1.5-2.0 cm in diameter and dark brown at maturity; plants 1-1.5 m tall; pistillate bracteoles rounded to blunt at the tip ***T. angustifolia***
 - 3 Leaves 6-12 (-15) mm wide, most or all not auricled at the junction of the blade and the sheath; pistillate portion of spike (0.8-) 1.3-1.8 cm in diameter and light cinnamon brown at maturity; plants (1-) 2-4 m tall; pistillate bracteoles acute to acuminate at the tip ***T. domingensis***

*? ***Typha angustifolia*** Linnaeus, Narrowleaf Cattail. Cp (GA?, NC, SC, VA), Pd, Mt (VA): brackish to fresh waters of marshes and swamps, usually tidal, and also inland in non-tidal wetlands; common (rare in Piedmont and Mountains). May-July; June-November. Nova Scotia west to ND, south to SC, FL (?), LA, and TX (?); Eurasia. Considered by some authors to be introduced in North America. [= C, F, FNA, G, GW, K, W, WV, Z; < *T. angustifolia* – S (also see *T. domingensis*)]

Typha domingensis Persoon, Southern Cattail. Cp (GA, NC, SC, VA): brackish to nearly fresh waters of marshes and swamps, usually tidal; common. June-July; July-November. DE south to s. FL, west to TX; north inland to NE and UT; and south into tropical America; Eurasia; Africa; Oceania. [= C, F, FNA, G, GW, K, Z; < *T. angustifolia* – S]

Typha ×glauca Godron (pro sp.), Hybrid Cattail. Cp (GA?, NC, SC, VA), Mt (VA): fresh to brackish waters of lakes, ponds, and rivers; rare. May-July; June-November. Both C and K apply this name to two different hybrids: *T. angustifolia* × *latifolia* and *T. domingensis* × *latifolia*. The name properly applies to *T. angustifolia* × *latifolia* (Smith in FNA 2000). [= C, GW, K, WV, Z; = *T. glauca* Godron – RAB, F]

Typha latifolia Linnaeus, Common Cattail. Mt, Pd, Cp (GA, NC, SC, VA): fresh waters of ponds, lakes, ditches, marshes, including in tidal freshwater marshes; common. May-July; June-November. Newfoundland west to AK, south to FL, TX, CA, and Mexico; Central America; South America; Eurasia. [= C, F, FNA, G, GW, K, S, W, WV, Z]

XYRIDACEAE C. Agardh 1823 (Yellow-eyed Grass Family)

A family of 5 genera and about 325-350 species, nearly cosmopolitan (most diverse in tropical and subtropical regions, and especially South America). References: Kral in FNA (2000); Kral in Kubitzki (1998b).

***Xyris* Linnaeus 1753 (Yellow-eyed Grass)**

A genus of about 300 species, nearly cosmopolitan (most diverse in tropical and subtropical regions, and especially South America). This "technical" genus is known well by only a few botanists, and additional undescribed taxa are possible.

References: Kral in FNA (2000); Ward (2007b)=V; Bridges & Orzell (2003)=X; Kral (1966a)=Z; Kral (1983b, 1999); Kral in Kubitzki (1998b). Key adapted from X, GW, and Z.

Identification notes: In vegetative condition, *Xyris* is often confused with other monocots with equitant leaves, such as *Iris* spp. (Iridaceae), *Lachnanthes caroliniana* (Haemodoraceae), and *Tofieldia* spp. (Tofieldiaceae).

- 1 Keel of the lateral sepals shortly ciliate-scabrid (or sometimes entire in *X. brevifolia*, and then the bract tips purplish-tinged).
 - 2 Plants small, usually < 30 cm tall; principal leaves usually < 10 cm long; mature spikes < 1 cm long when mature.
 - 3 Leaves filiform, with expanded brownish lustrous bases, usually exceeding the sheath of the scape; [plants of s. AL and the FL Panhandle]..... *X. isoetifolia*
 - 3 Leaves linear, the bases not expanded, shorter than, equaling, or slightly exceeding the sheath of the scape; [plants collectively more widespread].
 - 4 Keel of the lateral sepals straight to slightly curved, remotely ciliate or entire; spikes broadly ovoid to subglobose, the bracts loose, bicolored, the distal portions maroon or purplish and often with erose margins..... *X. brevifolia*
 - 4 Keel of the lateral sepals strongly curved, densely ciliate; spikes lance-ovoid to ovoid, the bracts entire, not purple-tinged, and lacking erose borders.
 - 5 Plants perennial; leaves ascending, green with a distinct brown patch at the base; fruiting spikes ovoid, blunt, somewhat 2-edged from the strongly keeled outer bracts..... *X. drummondii*
 - 5 Plants annual; leaves flabellate arranged, spreading to recurved against the substrate, usually maroon; fruiting spikes often elongated and acute, not 2-edged..... *X. flabelliformis*
 - 2 Plants large, usually > 30 cm tall; principal leaves > 10 cm long; mature spikes > 1 cm long when mature.
 - 6 Leaves ascending, twisted, strongly grooved; spikes ovoid, the bracts and lateral sepals with a small tuft of short, reddish-brown hairs; bases of leaves abruptly expanded, pinkish or purplish (dark brown in age), the outermost leaves often scale-like, the plant base therefore appearing bulbous; [of the Mountains, Piedmont, and Coastal Plain]..... *X. torta*
 - 6 Leaves spreading, not twisted or only slightly so; spikes narrowly ovoid, ellipsoidal, or oblong; bracts and sepals without a small apical tuft of hairs; bases of leaves whitish, tan, pink, purplish, maroon, or dark brown, the outermost leaves not scale-like, the plant base not appearing bulbous; [typically of the Coastal Plain, rarely disjunct inland].
 - 7 Seeds lustrous, translucent, broadly ovoid; spike pale brown or tan, the scales loosely imbricate; plant bases pinkish, purplish, or tan, with dark longitudinal striations on the inner leaf bases; leaves 3-20 mm wide; petal blades obovate, 6-7 mm long, opening in early morning, usually closing by mid-day..... *X. ambigua*
 - 7 Seeds farinose, dark brown (*X. stricta*) or pale (*X. louisianica*) at maturity, narrowly ellipsoid to ovoid; spike dark brown, the scales tightly imbricate; plant bases maroon, purplish, dark-brown, or reddish-brown; leaves 2-5 mm wide; petal blades triangular-cuneate, 3-5 mm long, opening at mid-day.
 - 8 Seeds pale when mature; plant bases maroon to maroon-brown, solitary or in small clumps; upper end of scape somewhat flattened, but not nearly as broad as the spike; spike narrowly ovoid to ellipsoid, slightly pointed..... *X. louisianica*
 - 8 Seeds dark brown when mature; plant bases dark maroon to dark brown, densely cespitose; upper end of the scape conspicuously flattened, almost as broad as the spike; spike oblong-cylindrical, obtuse..... *X. stricta*
 - 1 Keel of the lateral sepals irregularly lacerate or fimbriate, or if entire then the the bract tips not purplish.
 - 9 Leaves narrowly linear to filiform, 0.5-2.0 (-2.5) mm wide, not twisted (or scarcely so); leaf bases expanded, lustrous, hard, tan to brown, neither bulbous nor deeply set in the substrate; spikes ovoid or ellipsoid, 4-15 mm long.
 - 10 Leaves filiform, terete or elliptic in cross-section, 0.5-1.0 mm wide, without a paler, hardened margin; scape as broad as or broader than the leaf blades; scales smooth-edged to denticulate, not curled away from the head, the head thus appearing smooth; staminodia beardless..... *X. baldwiniana*
 - 10 Leaves linear, flattened in cross-section, 1-2 (-2.5) mm wide, with a pale, hardened margin; scape usually narrower than the leaf blades; scales ragged-lacerate, the tips curling away from the head, giving it a ragged appearance; staminodia bearded..... *X. elliotii*
 - 9 Leaves broader, (1.5-) 2.0-25 mm wide, strongly twisted to straight, the leaf bases either not expanded, lustrous, hard, and tan to brown, or, if so, then the base also either bulbous and/or deeply seated in the substrate; spikes narrowly lanceolate, ellipsoid, to broadly ovoid, 4-40 mm long.
 - 11 Keel of the lateral sepals long-fimbriate toward its apex, the fimbriate tip conspicuously exerted from the subtending bract (sometimes eroded and less conspicuous on older spikes).
 - 12 Leaves strongly twisted, 2-5 mm wide; leaf bases hardened, swollen, bulbous, dark lustrous brown; scape ridges smooth; petal blades white or yellow; [of moist to dry pinelands]..... *X. caroliniana*
 - 12 Leaves not twisted, 5-25 mm wide; leaf bases soft, not swollen, not bulbous, pale; scape ridges strongly scabrous; petal blades yellow; [of aquatic to very wet peaty, mucky, or sandy ponds, marshes, or other wetlands]..... *X. fimbriata*
 - 11 Keel of the lateral sepals lacerate, or if very shortly fimbriate, then not conspicuously exerted from the subtending bract.
 - 13 Lateral sepals longer than and exerted from the subtending bracts; scapes 5-15 dm tall.
 - 14 Leaf blades 1-2 (-3) mm wide, 6-30 cm long; spikes 10-16 mm long; seeds 0.4-0.6 mm long; [endemic to Panhandle FL and s. AL]..... *X. longisepala*
 - 14 Leaf blades 5-15 mm wide; (20-) 30-50 (-60) cm long; spikes 10-20 (-25) mm long; seeds (0.6-) 0.7 (-0.8) mm long; [more widespread in our area]..... *X. smalliana*
 - 13 Lateral sepals shorter than the subtending bracts, and therefore hidden (except when the spikes open to shed seeds); scapes 1.5-12 dm tall.
 - 15 Scapes flexuous, usually spirally twisted; upper portion of leaf blades conspicuously twisted; plant bases pinkish, purplish, or dark brown, bulbous or deeply set in the substrate.
 - 16 Base of plant deeply set in the substrate, without distinct outer scale leaves; leaf bases not noticeably expanded, the plant base therefore not bulbous; leaves smooth, 2-4 mm wide; petal blades ca. 3 mm long..... *X. chapmanii*
 - 16 Base of plant shallowly set on the substrate, often with short, black outer scale leaves; leaf bases noticeably expanded, the plant base therefore appearing bulbous; leaves either smooth and 5-10 mm wide, or scabrous and 2-10 mm wide; petal blades ca. 5 mm long.
 - 17 Leaf and scape surfaces prominently papillose or tuberculate-scabrid; petal blades suborbicular, yellow; seeds narrowly ovoid or narrowly ellipsoidal, ca. 1.0 mm long..... *X. scabrifolia*

- 17 Leaf and scape surfaces smooth (or scabrous only along margins and ridges); petal blades obovate, white or yellow; seeds ovoid or ellipsoid, 0.5-0.6 mm long.
- 18 Seeds translucent; leaf margins smooth; [plants of acidic sites of the Coastal Plain].....*X. platylepis*
- 18 Seeds opaque; leaf margins slightly scabrous; [plants of calcareous seeps and fens of the Ridge and Valley].....*X. tennesseensis*
- 15 Scares usually not flexuous, usually not spirally twisted; upper portion of leaf blades not conspicuously twisted; plant bases variously colored, flabellate or equitant and set at ground level.
- 19 Summit of the scape distinctly flattened and broad relative to the spike; scape ridges 2-3, the 2 most prominent comprising the flattened edge of the scape.
- 20 The 2 principal scape ridges noticeably and abruptly flattened and winglike below the spike, their combined width (on fresh material) broader than the scape proper; fruiting spikes mostly 8-15 mm long; seeds 0.4-0.6 mm long, translucent, ovoid or ellipsoidal, about 1.5× as long as wide, with lines of very fine papillae, not farinose*X. difformis*
- 20 The 2 principal scape ridges not abruptly flattened and winglike below the spike, their combined width < the scape proper, which is itself flattened (narrowly elliptic in cross-section); fruiting spikes mostly (10-) 20-25 mm long; seeds 0.8-1.0 mm long, dark when ripe, fusiform to narrowly elliptic, 2-3× as long as wide, with lines of very fine papillae, these however obscured by a farinose covering*X. iridifolia*
- 19 Summit of the scape nearly terete or somewhat flattened, much narrower than the spike; scape ridges several (usually > 3), at least on the mid to lower portion of the scape.
- 21 Seeds farinose, very dark; surfaces of leaves tuberculate-scabrid, the leaves strongly ascending, linear, generally > 10 cm long; leaves generally dull-colored.
- 22 Mature spikes ovoid, sharply acute; plants solitary or in small clumps; leaves 10-30 (-50) cm long, 1.5-6.0 mm wide, dark maroon or purplish at the base*X. floridana*
- 22 Mature spikes ovoid to ellipsoid, acute to obtuse; plants typically in large dense tufts; leaves 20-50 cm long, 3-12 mm wide, the older ones with dark-brown to gray bases, the younger with tan bases.....*X. serotina*
- 21 Seeds translucent, not farinose; surfaces of leaves smooth (or sparsely tuberculate-scabrid in *X. curtissii*, which also has leaves linear-curved and generally < 10 cm long); leaves generally a bright yellowish-green above the base.
- 23 Leaves broadly linear-curved, spreading, typically < 10 cm long, 2-4.5 mm wide; plants perennial, in tufts (rarely solitary); mature spikes acute, with < 10 flowers; leaf bases pinkish or purplish; old flowers fugacious, not persisting on spikes*X. curtissii*
- 23 Leaves linear, ascending, 10-60 cm long, 5-10 mm wide; plants annual, solitary or in small tufts; mature spikes obtuse, many-flowered; leaf bases tan (very rarely pinkish); old flowers often persistent on the spikes, drying blackish...*X. jupicai*

Xyris ambigua Beyrich ex Kunth. Cp (GA, NC, SC, VA), Pd (NC), Mt (VA): wet savannas and flatwoods, pinelands, edges of depression ponds; common. June-August. Se. VA south to FL, west to AL and ec. TX, primarily on the Coastal Plain. [= RAB, C, F, FNA, G, K, W, X, Y; < *X. ambigua* – GW, S, Z (also see *X. louisianica*)]

Xyris baldwiniana J.A. Schultes, Grassleaf Yellow-eyed Grass. Cp (GA, NC, SC), Pd (NC): wet savannas, seepage bogs, sandhill seeps, wet savanna ecotones; rare (NC Watch List). June-July. Se. NC south to n. FL, west to s. AR and ec. TX, primarily on the Coastal Plain. [= RAB, FNA, GW, K, S, X, Y, Z]

Xyris brevifolia Michaux, Shortleaf Yellow-eyed Grass. Cp (GA, NC, SC): wet sands of pinelands, especially seasonally wet, open, white sands of spodosol longleaf pine flatwoods (Leon series soils), margins of Carolina bay sandrims; rare (NC Rare, SC Rare). June-August. Se. NC south to s. FL, west to s. AL and w. FL; West Indies and South America. [= RAB, FNA, GW, K, S, X, Y, Z]

Xyris caroliniana Walter, Pineland Yellow-eyed Grass. Cp (GA, NC, SC, VA): dry to moist pine flatwoods, moist savannas, scrub oak sandhills; common (VA Rare). June-July. Se. VA south to FL, west to se. TX, and disjunct northward in s. NJ. White-petaled populations of *X. caroliniana* occurring in the East Gulf Coastal Plain need additional study. [= RAB, C, FNA, GW, K, X, Y, Z; > *X. flexuosa* Muhlenberg ex Elliott – F, G, S; > *X. pallescens* (C. Mohr) Small – S]

Xyris chapmanii Bridges & Orzell, Chapman's Yellow-eyed Grass. Cp (GA?, NC, SC): sandhill seepage bogs in areas of copious lateral seepage in deep muck soils; rare (NC Rare). Sc. NC south to panhandle FL, west to e. TX. This taxon is abundantly distinct from *X. scabrifolia*. [= X, Y; < *X. scabrifolia* – FNA, K, Z]

Xyris curtissii Malme, Curtiss's Yellow-eyed Grass. Cp (GA, NC, SC, VA), Pd (SC): savannas; rare (NC Watch List, VA Rare). July-August. Se. VA south to n. FL and west to s. AR and ec. TX, primarily on the Coastal Plain; disjunct in s. NJ. [= RAB, G; = *X. difformis* Chapman var. *curtissii* (Malme) Kral – C, FNA, GW, K, X, Y, Z; > *X. bayardii* Fernald – F; > *X. curtissii* – F; ? *X. neglecta* Small – S]

Xyris difformis Chapman. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): savannas, roadside ditches, pond margins, other wet habitats; common (VA Watch List). August-October. New England and s. Canada south to n. FL and ec. TX. [= X; = *X. difformis* Chapman var. *difformis* – C, FNA, GW, K, Y, Z; < *X. difformis* – RAB, F, G, S, W (also see *X. curtissii*)]

Xyris drummondii Malme, Drummond's Yellow-eyed Grass. Cp (GA): wet pine flatwoods, ditches; uncommon. Se. GA south to Panhandle FL, west to s. MS. [= FNA, GW, K, X, Y, Z]

Xyris elliotii Chapman, Elliott's Yellow-eyed Grass. Cp (GA, SC): margins of drawdown zones of clay-based Carolina bays, limesinks and flatwoods swales, wet savannas; uncommon. May-June. E. SC south to the Gulf Coastal Plain. [= RAB, FNA, GW, K, S, X, Z; > *X. elliotii* var. *elliotii* – Y; > *X. elliotii* var. *stenotera* Malme – Y]

Xyris fimbriata Elliott, Giant Yellow-eyed Grass. Cp (GA, NC, SC, VA): in mucky or sandy soils of upland depression ponds, also along sandhill streams, impoundments and in deep muck of sandhills seepage slopes often just below the zone occupied by *Xyris chapmanii*; common (VA Rare). September-October. Se. VA south to c. FL, west (interruptedly) to se. TX; disjunct in s. NJ, DE, and c. TN. [= RAB, C, F, FNA, G, GW, K, S, X, Y, Z]

Xyris flabelliformis Chapman, Savanna Yellow-eyed Grass. Cp (GA, NC, SC): wet sands of pinelands, especially seasonally wet, open, white sands of spodosol longleaf pine flatwoods (Leon series soils), margins of Carolina bay sandrims; rare (NC Rare, SC Rare). May-June. Se. NC south to s. FL, west to se. LA, on the Coastal Plain. [= RAB, FNA, GW, K, S, V, X, Z]

Xyris floridana (Kral) Bridges & Orzell, Florida Yellow-eyed Grass. Cp (GA, NC, SC): savannas, wet pine flatwoods, ditches; rare (NC Rare, SC Rare). August. Se. NC south to s. FL, west to se. LA. [= X; = *Xyris difformis* Chapman var. *floridana* Kral – FNA, GW, K, Y, Z]

Xyris iridifolia Chapman, Irisleaf Yellow-eyed Grass. Cp (GA, NC, SC, VA): marshes, upland pond margins, blackwater river channels, floodplain pools, other wet habitats; uncommon (NC Watch List, VA Rare). July-September. Se. VA south to n. FL, west to e. TX; disjunct in c. TN. [= RAB, C, GW, S, Z; = *X. laxifolia* Mart. var. *iridifolia* (Chapman) Kral – FNA, K, X, Y]

Xyris isoetifolia Kral. Cp (AL, FL): bogs, savannas, and depression pond margins; rare. Endemic to FL Panhandle and s. AL. [= FNA, GW, K, X, Y, Z]

Xyris jupicai L.C. Richard. Cp (GA, NC, SC, VA), Pd (NC), Mt (VA): ditches, various wet habitats; common. July-September. NJ south to s. FL, west to TN, AR, se. OK (Singhurst, Bridges, & Holmes 2007), and TX, and in Latin America. Sometimes weedy and considered by some to be adventive from further south. At least some populations in our area are native and may additionally be worthy of taxonomic recognition as distinct from "true" *X. jupicai* (P. McMillan, pers. comm., 2003). [= RAB, C, FNA, GW, K, W, X, Y, Z; = *X. caroliniana* – F, misapplied; > *X. elata* Chapman – G, S; > *X. communis* Kunth – S; > *X. caroliniana* – G, S, misapplied]

Xyris longisepala Kral. Cp (AL, FL): depression pond margins; rare. Endemic to FL Panhandle and s. AL. [= FNA, GW, K, X, Y, Z]

Xyris louisianica Bridges & Orzell. Cp (GA): pine savannas, bogs, ditches and disturbed areas; rare. FL Panhandle and GA west to se. TX. [= K, X; = *X. stricta* Chapman var. *obscura* Kral – FNA, Y; < *X. ambigua* – GW, S, Z]

Xyris platylepis Chapman. Cp (GA, NC, SC, VA): sandhill seeps, savannas, ditches; common (VA Watch List). July-September. Se. VA south to s. FL, west to se. LA; disjunct in sw. LA and se. TX. [= RAB, C, F, FNA, G, GW, K, S, X, Y, Z]

Xyris scabrifolia R.M. Harper, Roughleaf Yellow-eyed Grass. Cp (GA, NC, SC): sandhill seepage bogs and wet pine savannas; rare (US Species of Concern, NC Rare). Sc. and se. NC south to panhandle FL, west to s. AL and s. MS; disjunct in sw. LA-se. TX. *X. chapmanii* is a taxon distinct from *X. scabrifolia*. [= GW, S, X, Y; < *X. scabrifolia* – FNA, K, Z (also see *X. chapmanii*)]

Xyris serotina Chapman. Cp (GA, NC, SC): depression meadows, ultisol savannas (Lynchburg/Rains complex or Eulonia/Oketee), ditches; rare (NC Rare, SC Rare). September. Se. NC south to c. FL, west to s. MS, in the Coastal Plain. Reported for our area by Kral (1966b) and relocated by B.A. Sorrie. [= RAB, FNA, GW, K, S, X, Y, Z]

Xyris smalliana Nash, Small's Yellow-eyed Grass. Cp (GA, NC, SC), Mt (SC): pond margins, ditches; uncommon (NC Watch List). July-August. ME south to FL, west to s. MS; disjunct to se. TX. [= RAB, C, FNA, GW, K, S, W, X, Y, Z; > *X. congdonii* Small – F; > *X. smalliana* – F; > *X. smalliana* var. *smalliana* – G; > *X. smalliana* var. *olneyi* (Wood) Gleason – G]

Xyris stricta Chapman. Cp (GA, NC, SC): depression ponds, depression meadows, borrow pits, ultisol savannas and ditches; rare. July-September. SC south to n. FL, west to s. MS and se. LA. Reported for our area by Kral (1966b). P. McMillan (pers. comm.) reports this species from a number of locations in the outer Coastal Plain of NC and SC. [= GW, K, S, X, Z; = *X. stricta* var. *stricta* – FNA, Y]

Xyris tennesseensis Kral, Tennessee Yellow-eyed Grass. Mt (GA): seepy, fenlike areas over limestone; rare (US Endangered, GA Endangered). TN, AL, and nw. GA (Jones & Coile 1988). See Kral (1978b). [= FNA, K]

Xyris torta J.M. Smith, Mountain Yellow-eyed Grass. Mt, Pd (GA, NC, SC, VA), Cp (SC, VA): mountain bogs, marshes, ditches; uncommon (SC Rare). June-August. NH west to WI, south to e. VA, e. NC, w. SC, c. GA, LA, OK, and TX. This is our only species of *Xyris* not strongly associated with the Coastal Plain. [= RAB, C, FNA, GW, K, S, W, Z; > *X. torta* var. *macropoda* Fernald – F, G; > *X. torta* var. *torta* – F, G]

ZOSTERACEAE Dumortier 1829 (Eelgrass Family)

A family of 3 genera and about 18 species, nearly cosmopolitan in distribution. References: Haynes in FNA (2000); Kuo & McComb in Kubitzki (1998b).

Zostera Linnaeus 1753 (Eelgrass)

A genus of about 12 species, aquatic herbs, of nearly cosmopolitan distribution. References: Haynes in FNA (2000); Crow & Hellquist (2000)=Y; Kuo & McComb in Kubitzki (1998b); Green & Short (2003)=Z.

Zostera marina Linnaeus var. *stenophylla* Ascherson & Graebner, Eelgrass. Cp (NC, VA): estuarine waters; common. February-March. The species occurs in Eurasia and North America. Var. *stenophylla* is North American, and ranges south along the Atlantic coast to NC and allegedly to FL (though reports from that state are apparently not substantiated and may be based on misidentification of other aquatics). [= F, G, Y; < *Z. marina* – RAB, C, FNA, K, S, Z]
